EXCHANGE CARRIERS OF UTAH

ACCESS SERVICE

6. Switched Access Service (Cont'd)

6.2 Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

The terminating access minutes are billed at the Local Transport Rate Category, which includes Tandem Switching Transport. There are also Direct Trunked Transport and Multiplexing rates. An Interexchange Carrier can order either one of these arrangements. The originating access rates will be billed at the existing rate, which is not distance sensitive.

(1) Direct Trunked Transport

The Direct Trunked Transport rate elements recover a portion of the cost associated with a communications path or circuits dedicated to the use of a single customer between:

- the serving wire center and an end office,
- the service wire center and a tandem,
- the serving wire center and a hub,
- a hub and an end office,
- the serving wire center and an ADM equipped wire center where add/drop multiplexing functions are performed,
- an ADM equipped wire center and an end office.

Direct Trunked Transport is not available: (1) from end offices that provide equal access through a Centralized Equal Access arrangement, or (2) from end offices that lack recording or measurement capability.

Normally, Direct Trunked Transport of originating 800 series calls from an end office is available only from Service Switching Point (SSP) equipped end offices. However, certain SSP equipped end offices cannot accommodate the direct trunking of the 800 series (other than the 800 service access code).

Five types of Direct Trunked Transport are available:

(C)

- High Capacity DS1 – an isochronous serial digital channel with a rate of 1.544 Mbps;
- High Capacity DS3 – an isochronous serial digital channel with a rate of 44.736 Mbps;
- ESALT 2 Mbps – an Ethernet packet based channel with a rate of 2 Mbps;
- ESALT 10 Mbps – an Ethernet packet based channel with a rate of 10 Mbps;
- ESALT 50 Mbps – an Ethernet packet based channel with a rate of 50 Mbps.

ACCESS SERVICE

(N)

6. Switched Access Service (Cont'd)

6.2 Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(1) Direct Trunked Transport (Cont'd)

Where suitable facilities exist, the Ethernet Switched Access Local Transport (ESALT) option enables the customer to handoff Internet Protocol (IP) formatted traffic to the Telephone Company at the designated end office, host office, or tandem office location where the Telephone Company will convert the customer's traffic to Time Division Multiplexing (TDM) format for termination to local exchange service end users over the Telephone Company's local network. This option also enables the Telephone Company to convert traffic originated from its local exchange service end users from TDM format to IP format at the designated end office, host office, or tandem office and handoff that IP formatted traffic to the customer designated premises.

ESALT may only be used in conjunction with FGD Access.

When ordering ESALT, the customer must specify:

- (1) the ESALT-equipped Switching Wire Center (SWC) and
- (2) the end office switch(es) to which the customer wants to terminate interexchange voice traffic originated on its IP based network and/or receive interexchange voice traffic originated on the Telephone Company's network.

ACCESS SERVICE

6. Switched Access Service (Cont'd)

6.2 Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(1) Direct Trunked Transport (Cont'd)

For FGD Switched Access Service between an end user's premises and an ESALT Switching Wire Center (SWC), the customer will be billed the applicable Local Switching and Tandem Switched Transport rate elements for its FGD usage. The mileage used to determine the monthly rate for the Tandem Switched Facility, when required.

When the customer uses Internet Protocol (IP) signaling in conjunction with ESALT, it will transmit call signaling data that must either: 1) conform to an active 10-digit North American Numbering Plan or directory number which is associated with the geographic location of the originating calling party (i.e., Calling Party Number and/or Automatic Number Identification; or 2) represent IP equivalent call signaling that is mutually agreed upon by the customer and Telephone Company at the time the customer places its order for ESALT.

ACCESS SERVICE

6. Switched Access Service (Cont'd)

6.2 Rate Categories (Cont'd)

(A) Local Transport (Cont'd)

(4) Interface Groups

Ten Interface Groups are provided for terminating the Local Transport at the customer's designated premises. Each Interface Group provides a specified premises interface (e.g., two-wire, four-wire, DS1, etc.).

(D)
|
(D)

(5) Offices that provide Direct Trunk Transport are set forth in the National Exchange Carrier Association, Inc. (NECA) Tariff F.C.C. No. 4, Wire Center Information.

(N)

(6) The Interexchange Carrier ordering the Direct Trunk Transport must provide the projected percentage of interstate use (PIU).
