Merilee,

Will you give this to Steve Goodwill - he was asking if I had heard from Tim Vetere.

Tim also indicated that the engineer RMP hired was at his place on June 18 and went over everything - Tim does not know what he found out.

Public Service Commission

Now that the weather has gotten hot, mu pump keeps shutting off at 11:30 a.m. and 5:30 p.m. for the last 5 days. This time seems to be when everyone in coming home for lunch and right after work. I have not added my new horse pwer because it won't work. The volts have been as low as 459. My big pump on the bottom is also running low volts and it is going to burn it up aslo. These pumps are not made to shut off and on at low volts. I would appreciate your help on this matter.

Thank you for your time Tim Vetere, Green River Utah
