Prepared by:

Jim Lazar Regulatory Assistance Project Dec. 1, 2008

This is intended as an example of residential rate design in the Western United States.

Each was taken from the utility websites in November / December, 2008

Some rate designs are very complex and may not lend themselves to accurate presentation in this format.

Where daily rate allowances or rates are specified, these were multiplied by 30 to provide monthly rates.

Many utilities have multiple residential rates; the most common or "standard" non-TOU rate was used.

Apologies in advance for any errors of interpretation or transcription.
