ICNU Data Request 6.3

ICNU Data Request 6.3

Please refer to the Company's response to ICNU DR 3.30. Has PacifiCorp overstated the amount reserves required for serving of non-owned generators in the WCA model for the test year? If so, please quantify the impact on net power costs in this case and provide the correct inputs for the demand file for the test year.

Response to ICNU Data Request 6.3

With respect to the "West Kraft Misc Gen" (Weyerhaeuser Company) contract previously provided as Confidential Attachment ICNU 3.30 -2, the Company should not have included costs attributable to the provision of reserves for this customer in net power costs because the contract provides that Weyerhaeuser will self-supply their internal requirements for reserves. The Company has not done analysis to quantify the impacts. Any correction to data will be incorporated in the Company's rebuttal testimony.

With respect to the "Pelton Rereg Gen" contract previously provided as Attachment ICNU 3.30 -1, the Company should not have included costs attributable to the provision of reserves for this customer in net power costs because the contract does not include any provisions governing charges for reserves provided within PacifiCorp's balancing authority area and PacifiCorp has not been charging this customer for reserves. The Company has not done analysis to quantify the impacts. Any correction to data will be incorporated in the Company's rebuttal testimony.
