Imperfect I am, even below the dust of the earth.

3rd Nephi 11:30

Behold this is not my doctrine to stir up the hearts of men with anger one again another, but this is my doctrine that such things should be done away.

to whom It may concern,

I thank you for some of the information gained through you solar power program.

May I state that solar power was never ment to manage peak load, it is closer to customer pc, to customer pc, to large mainframe computer and does the study address that issue. this type of information was not discussed in the report.

the comercial gain bias is shown in the report, but is the public interest and the government subsidy program acually telling us what we need to know. should the governments be looking at putting solar pannels on most of their buildngs and shools?

Have a Great Day and God Bless You.

Randy Hanson
