Topic: My Comments on the 2010 Annual Report on Whether a Continued or Expanded Solar PV Program in Utah is Appropriate and How that Program might be Structured (Docket No. 07-035-T14)

My name is Steven Wright and I live in Sandy, Utah and I am seriously considering purchasing a 0.9 kW solar PV system (one quarter of my electrical usage) this year. I strongly recommend this program not only to be continued but to be expanded. At \$1.55/W I would receive about \$1400 with this program. This would go toward paying the \$6500 estimate given by the vendor.

Without this program the probability that I would be able to afford it is greatly diminished. Moreover, the chances that I would expand my home PV solar power capacity in the future to eventually achieve a 100% electric power production would also be greatly reduced if this program would not continue for several years in the future.

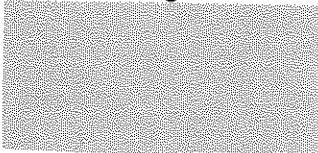

I would like to thank Rocky Mountain Power and the Commission for their work to date on the pilot solar program and for this opportunity to give my opinion.

Thank you.

Sincerely,

Steven Wright
