To Whom it my concern.....

You may find this interesting.....Is this proposed transmission line " Benlowman to Populas " considered part of the Federal Grid System ?.....If it is it will be signed as such by the United States Secretary of Energy. You will find that it is not. If it was Rock Mountain Power would have to follow a much stricter agenda. In Idaho they would have to do such things as economic impact study, enviromental impact study ect. ect. to cross private property. Idaho has a IPUC statute in place for Transmission Lines that are considered part of the Federal Grid System. Rock Mountain has found a loop hole and DOES NOT have to follow any of this statute because this Line is not part of the grid system. You may contact me for further details.
