Subject: PSC input re: net metering, etc. Docket 08-035-78

CC: Andrade Barbara
Hello.

I support increasing the customer--generated capacity provision to perhaps 10% of the 07 peak demand. This would encourage more consumer installations as well as substantive building installations, such as those proposed by SL County.

I further support a credit greater than the current credit--to encourage private investment in energy excess buildings and installations--in essence facilitating the development of small generating 'stations' throughout the Rocky Mtn Power system.

Does the PSC regulate municipal power companies? If so, I strongly support they all institute a net metering plan and incentives comparable to those for Rocky Mtn Power. If not, how do we encourage them to do so?

If it might be useful, I'd be happy to participate in a PSC meeting on these topics. We currently participate in Rocky Mtn Power's net metering plan

Thanks.
