UIEC Data Request 2.6

UIEC Data Request 2.6

If Rocky Mountain Power has commissioned new samples to gather information for inferring the peak load of the non-demand metered rate schedules, when will the results of the new samples be available for evaluation and use in the preparation of a new cost of service analysis?

Response to UIEC Data Request 2.6

New samples for the Utah Residential and Schedule 023 rate classes were activated on October 1, 2008. A new Utah Schedule 006 sample was activated on November 1. As such, the load estimates used in Docket No. 09-035-23 include 3 months of data from the new samples for the Residential and Schedule 023 classes (Oct., Nov. and Dec.), and 2 months from the Schedule 006 rate class (Nov. and Dec).
