

ICNU Data Request 12.42

Please refer to the response to ICNU 10.40. This response asserts that PacifiCorp has hourly generator logs for the individual Bridger units. It refers to ICNU 1.53. However, 1.53 does not provide actual hourly logs but rather provides unit generation for only certain specific hours. Thus, they do not represent hourly generator logs. Please provide a complete answer to ICNU 10.41.

Response to ICNU Data Request 12.42

ICNU Data Request 10.40 refers to ICNU Data Request 1.70 in the Company's Washington general rate case Docket No. UE-090205. The Company's response to the request in the Washington general rate case did not provide hourly generation logs for individual Bridger units. The Company's response to ICNU Data Request 1.53 contains the same information, except that it also has information about units that are located outside the west control area.

As an example of how Jim Bridger's hourly generation data are used in the calculation of the ramping loss adjustment, please refer to the hourly generation from the Jim Bridger unit 1 in hour ending 20 on 1/4/2005 in the Confidential Attachment ICNU 12.43, which shows the same value as the one in Confidential Attachment ICNU 1.53 for the same unit at the same time. Also, please refer to the hourly generation from the Jim Bridger unit 4 in hour ending 23 on 1/29/2006 in Confidential Attachment ICNU 12.43, which also shows the same value as the one in Attachment ICNU 1.53 for the same unit at the same time.
