

From: Randy Christensen, Tooele County
Docket Number 10-035-39

This is to clarify Mr. Ross Hudson's remarks that he made not only once but twice. Mr Hudson made it very clear that he worked for Division of Public Utilities for the State of Utah. In his examples he talked about the power lines in Ogden and Provo and the size of the poles there. He refers to the 138kv lines many times; he refers to RMP and the fact that they replaced many out dated poles with new ones. This shows how closely he has worked with RMP in his current job; he is bias and should not be allowed to make public comment. Oh and by the way would someone in your office inform Mr. Hudson that we talking about 345kv transmission lines here NOT 138kv power lines. Power poles for 138kv lines are typically 75 to 100 feet tall and poles for 345kv are typically 150 to 200 feet tall. I think you should correct Mr. Hudson's false and misleading statements since he works for your office and might mislead the board and the general public. Our expert in property values Mr. Hudson, talks about the property values not decreasing Ogden. Mr Hudson might this be because the power poles were there first before the homes and the condo's were built? Mr. Hudson states that the lines are least 1/2 mile from homes, my home is aprox. 900 feet from the line. SHAME ON YOU MR HUDSON for using your position to influence. Lets set the record straight Thank You
