Subject: rate hike

Docket No. 11-035-200

It's my understanding that Rocky Mountain Power wants a 10% rate hike AGAIN!! When is this going to stop? My electric bill averages \$170 in the winter and no less than \$80 in the summer. To those of us who are on fixed income, this is an outrage! If we are generating supposedly cheap electricity by wind power and solar panels, why haven't the savings been passed on to us? My guess is it's costing the utility company more to install this junk than what they're saving and they're passing the costs on to the consumer. I don't see Questar gas increasing their rates - in fact, they decreased their rates in the last two years. Supposedly for the average consumer, this is ONLY an increase of \$8 a month in their bill. That's ONLY another \$96 a year - \$96 a year that I don't have but then considering that my electric bill only averages \$80 in the summer, I'm guessing the increase would more likely be \$200 a year. It grinds on me to hear how Rocky Mountain Power needs the money to maintain service. What it really means is that Warren Buffet needs another 300 million tacked onto his profit Why not tell Mr. Buffet that you're sorry but he can't have his millions of dollars in profit this year! Wouldn't that just be a shame!!

I vote 'NO' on this for whatever it's worth!!
