I listen to people who oppose nuclear power. They talk about the risk to human health. But they never seem to talk about how much sickness, debility and death comes from burning coal day in and day out. Have you ever watched someone die of Emphysema?

Knowing this, I hope you understand, as I do, that penalizing roof-top users of solar panels is ludicrous on its face.

Let's not discourage anything that might slow the sickening of the air we breathe.

Let's not give reason to those who would see Pacificorp,s Costal executives as money diggers who don't care about Utah health living upwind as they do.

Let's not give reason to those who think that public servants serve corporations and not the public.

Let's rather surcharge the power company per household for all the health problems they cause. They are huge coal burners.

Let's rather have them pay market value for ALL the electricity our solar roofs generate beyond our own conservative usage like is done in some of their other states.

Corporations make poor comedians. This penalty charge can't be serious and is not very funny.
