Dear Public Service Commission members:

We breathe the air in the Salt Lake valley and are doing all that we can to avoid adding to the bad valley air that fouls our lungs. It is unsupportable that Rocky Mountain Power is discouraging consumer investments in solar energy by their proposed net metering charges. We want to encourage renewable energy sources like wind and solar and hope that you at the Public Service Commission will support our preferences. Our power company should be reducing carbon emissions and doing substantial investments in renewable energy sources.

Thank you for being open to citizen input.
