I would like to comment on priorities. In an area subject to smog, why are we/you not promoting solar in your governance of Rocky Mtn. Power? My home has a solar system which I paid for, with some subsidy help, and I fail to see why I should now pay RMP \$4.00 per month. My surplus power goes to RMP free and they sell it at their retail price. No power generation cost and 100% mark-up. That surplus power I generate does not have to be generated by coal. Solar generators should be celebrated, not charged.
