No fee for solar customers. We all breath the same air , will we tax the people using the carpool lanes , will we tax the bike commuter who uses the bike lane , no I don't think so . These are things to help everyone have less poisonous air , why would we penalize them? Not only do solar customers help all our air quality the utilities gain by not having to build new power plants or power lines, no energy is lost going long distances thru these lines,its a hedge against fossil fuel cost increases. Please do not overlook the long term benefits the solar customer will provide. More incentives and no penalties .

Thank you
