Charging individuals for doing a good thing for the environment is about as stupid and wrong-headed idea as can be had. Rocky Mountain Power should be punished for having one of the worst environmental records in the country. Reward them for spending most of their time promoting coal? Crazy.

I write to express my strong support for Utah rooftop solar customers, and my opposition to Rocky Mountain Power's proposed fee increase of \$4.25 per month targeting these customers. Utah's solar owners are making critical investments in clean energy at a time when Rocky Mountain Power is not.

Because Rocky Mountain Power's energy mix predominately relies on burning coal, it is a huge source of air pollution. In fact, among all Western utilities, Rocky Mountain Power is the single largest source of air pollution.

When rooftop solar customers plug their solar panels into Rocky Mountain Power's grid, they offset some of that dirty energy with pollution-free solar power.

And although these solar customers used their own money to buy solar equipment, the benefits accrue to many Utahns -- in the form of reduced air pollution, protection against fossil fuel price swings, and the creation of clean energy jobs right here in Utah.

Each individual rooftop solar installation is relatively small, but together their contribution is growing -- projected to comprise 20 MW by the end of 2014.

Solar customers are doing exactly what I wish Rocky Mountain Power would do: invest in Utah's renewable energy resources! I am very concerned that a solar penalty will stop some customers from "going solar" and impede progress toward renewables across the grid.

I stand with the rooftop solar energy producers of Utah and ask that the \$4.25 solar penalty not be approved. Their personal investment in clean energy creates clear benefits to Utah's health, environment, and economy. They should not be penalized; rather, they should be commended.

Sincerely,

Stephen Golding
