

1 **Q. Are you the same Steven R. McDougal who submitted direct testimony in this**  
2 **proceeding on behalf of PacifiCorp dba Rocky Mountain Power (“the**  
3 **Company”)?**

4 A. Yes.

5 **Purpose of Testimony**

6 **Q. What is the purpose of your rebuttal testimony?**

7 A. The purpose of my rebuttal testimony is to respond to and rebut certain issues raised  
8 by Division of Public Utilities (“DPU”) witnesses Dr. Artie Powell, Mr. Matthew  
9 Croft, Mr. Robert Davis, Mr. Richard Hahn, Mr. Clair Oman, Mr. Eric Orton, and  
10 Mr. David Thomson; Utah Office of Consumer Services (“OCS”) witness Ms.  
11 Donna Ramas; Utah Association of Energy Users Intervention Group (“UAE”)  
12 witness Mr. Kevin Higgins; Utah Industrial Energy Consumer (“UIEC”) witness  
13 Mr. Jonathan A. Lesser; and Federal Executive Agencies (“FEA”) witness Mr.  
14 Greg Meyer.

15 First, I present a revised calculation of the Company’s revised Utah-  
16 allocated revenue requirement and revenue increase requested in this case. The  
17 Company’s revised revenue requirement includes adjustments made to its original  
18 filing that address certain corrections identified by the Company and items raised  
19 in the direct testimony of intervening parties. Next, I discuss the Company’s  
20 opposition to certain adjustments proposed by intervening parties that are not  
21 incorporated into the revised revenue requirement presented herein. Last, I discuss  
22 the Company's proposal pertaining to the Naughton unit 3 gas conversion.

23 **Revised Revenue Requirement**

24 **Q. Have you recalculated a revised revenue requirement for the Test Period?**

25 A. Yes. The Company has adopted a number of adjustments reflecting updates and  
26 corrections to its original filing and issues identified by intervening parties through  
27 their direct testimony in this case, reducing the overall requested price change from  
28 \$76,252,101 to \$66,429,236. A summary of the Company's revised revenue  
29 requirement is provided in Exhibit RMP\_\_\_\_(SRM-1R) and details of the revenue  
30 requirement calculation, including new adjustments to the revenue requirement, are  
31 included in Exhibit RMP\_\_\_\_(SRM-2R). The revised results of operations for the  
32 twelve months ending June 31, 2015, (the "Test Period") demonstrate that under  
33 current rates, the Company will earn an overall return on equity ("ROE") of 8.7  
34 percent in Utah.

35 **Q. Please describe how Exhibit RMP\_\_\_\_(SRM-2R) is organized.**

36 A. Exhibit RMP\_\_\_\_(SRM-2R) is the Company's revised Utah results of operations  
37 report (the "Report") incorporating all adjustments to the revenue requirement  
38 identified in my rebuttal testimony. The Report is organized into sections marked  
39 with tabs in a similar manner as Exhibit RMP\_\_\_\_(SRM-3). Tabs 1, 2 and 11 of  
40 Exhibit RMP\_\_\_\_(SRM-2R) replace tabs of the same number in Exhibit  
41 RMP\_\_\_\_(SRM-3) previously filed by the Company in this proceeding. Tab 12 of  
42 Exhibit RMP\_\_\_\_(SRM-2R) is a new section of the Report that identifies all  
43 adjustments made by the Company in its rebuttal case to the original filing and  
44 provides details supporting the calculation of the adjustments. All adjustments in  
45 Tab 12 are incremental to the revenue requirement submitted in the Company's

46 original filing.

47 **Q. Please summarize the adjustments the Company is incorporating into its**  
48 **revised revenue requirement calculation.**

49 A. As shown in Table 1, the Company is making the following adjustments to the  
50 revenue requirement originally proposed in this proceeding related to corrections  
51 identified by the Company and issues addressed in the direct testimony of  
52 intervening parties:

**Table 1 (\$millions)**

<b>Filed Price Change</b>		<b>\$ 76.252</b>
<b>Adjustment Name</b>	<b>Adj No.</b>	<b>Amount</b>
Capital Structure and Cost Update		(3.514)
Net Power Cost Update	12.1	(4.948)
Fuel Stock Update	12.2	(0.024)
Wages and Benefits Update	12.3	(0.419)
REC Revenue	12.4	(0.427)
REC Revenue 10 Percent Incentive	12.5	0.245
Special Contract Revenues	12.6	(0.269)
Sub-lease Revenue	12.7	0.083
Lease Expense	12.8	(0.208)
Challenge Grants	12.9	(0.048)
Uncollectible Accounts Expense	12.10	(0.292)
Condit Hydroelectric Dam Decommissioning Expense Correction	12.11	0.949
Lobbying Expenses	12.12	(0.000)
Reduction to Affiliate Charges	12.13	(0.432)
Cottonwood Coal Lease	12.14	(0.027)
Bridger and Trapper Update	12.15	0.087
Lake Side 2 Prepaid Overhaul	12.16	(0.300)
Jim Bridger Unit 3 Small Projects	12.17	(0.044)
FC200 to FC300 Replacement	12.18	(0.035)
Mill Fork South Lease Acquisition	12.19	(0.076)
Vehicle Replacement	12.20	(0.002)
DPU Updates Adjustment	12.21	1.405
Big Fork Penstock	12.22	(0.004)
Casper Outer Loop	12.23	(0.006)
U3 OH Boiler Waterwall Tube Replacement At Naughton	12.24	(0.024)
Soda Spillway Improvements Project	12.25	(0.051)

Depreciation Reserve Update	12.27	(2.134)
Tax Impacts Update	12.28	(0.033)
Renewable Energy Tax Credit Update	12.29	(0.000)
Contingency Reserve	12.30	(0.195)
Total Adjustments		(9.823)
<b>Rebuttal Price Change</b>		<b>\$ 66.429</b>

53 **Adjustments to Revenue Requirement**

54 **Q. Please explain the updates, corrections or other revisions the Company has**  
55 **incorporated into its rebuttal case.**

56 A. Subsequent to filing the original revenue requirement request in this proceeding,  
57 the Company identified certain items to be updated in net power costs,  
58 miscellaneous fuel stock, wages and benefits, hydro decommissioning expense, and  
59 the renewable energy tax credit. Additionally, the Company has adopted several  
60 adjustments proposed by parties in this proceeding. The majority of these items  
61 have been communicated to intervening parties through discovery and addressed in  
62 their direct testimony. I address individually the adjustments made by the Company  
63 in developing its rebuttal revenue requirement.

64 **Capital Structure**

65 **Q. Were any changes to capital structure included in your revised revenue**  
66 **requirement?**

67 A. My rebuttal exhibit includes the impacts of the revised capital structure as  
68 supported in the rebuttal testimony of Mr. Bruce N. Williams. These updates result  
69 in a decrease of \$3,513,858 to the Company's original request.

70 **12.1 Net Power Cost Update**

71 **Q. Please explain the adjustment to update Net Power Costs.**

72 A. Page 12.1 of Exhibit RMP\_\_\_\_(SRM-2R) updates the net power costs included in  
73 the case consistent with the April 10, 2014, net power cost update ("NPC Update")  
74 filing submitted by the Company in this proceeding and as addressed by Company  
75 witness Mr. Gregory N. Duvall in his rebuttal testimony. As a result of the NPC

76 Update, Test Period net power costs are reduced from \$1,521.9 million to \$1,510.2  
77 million on a total Company basis, and from \$641.1 million to \$636.1 million on a  
78 Utah-allocated basis. The NPC Update decreases the revenue requirement  
79 requested in this case by \$4,947,729.

## 80 **12.2 Fuel Stock Update**

81 **Q. Did the NPC Update affect any other aspects of revenue requirement in this**  
82 **case that are not reflected in the 12.1 Net Power Cost Update adjustment?**

83 A. Yes. The NPC Update included changes to the Company's coal costs that impact  
84 the Company's coal fuel stock balances by plant for the Test Period, shown on  
85 Exhibit RMP\_\_\_\_(SRM-3), page 8.7.1. The updates to the NPC result in a \$217,160  
86 decrease in the Company's fuel stock levels in the Test Period. This information  
87 was also provided in the Company's response to data request OCS 29.1. This  
88 adjustment is shown in Page 12.2 of Exhibit RMP\_\_\_\_(SRM-2R). The NPC Update  
89 also impacts the Renewable Energy Tax credits, which is discussed later in my  
90 testimony.

## 91 **12.3 Wages and Benefits Update**

92 **Q. Please summarize the contents of the revised Wages and Benefits adjustment.**

93 A. Page 12.3 of Exhibit RMP\_\_\_\_(SRM-2R) contains an updated Wages and Benefits  
94 adjustment which reduces the Company's request by \$417,851 on a Utah-allocated  
95 basis. Included in this adjustment are various changes due to updates identified by  
96 the Company or adjustments proposed by the intervening parties that the Company  
97 accepted. Table 2 summarizes the changes included in the updated Wages and  
98 Benefits adjustment:

**Table 2 - Wage and Benefit Adjustment Summary**

	UT Allocated Amount
Medicare Tax Correction Adjustment	\$ (1,289)
Wage Increase Incremental Adjustment	1,115
AIP Incremental Adjustment	102,501
Pension Update Incremental Adjustment	(213,717)
Postretirement Update Incremental Adjustment	(122,869)
Normalize 401k Incremental Adjustment	(74,533)
Eliminate Severance Incremental Adjustment	(109,060)
<b>Total Rebuttal Adjustment</b>	<b>\$ (417,851)</b>

99 Each of these items is briefly described below:

100 Medicare Tax Correction

101 On November 26, 2013, the Internal Revenue Service implemented the Additional  
102 Medicare Tax as added by the Affordable Care Act (“ACA”). The Additional  
103 Medicare Tax applies to compensation over certain thresholds and is paid for by  
104 the employee at 2.35 percent. The Company’s initial filing incorrectly applied the  
105 Additional Medicare Tax rate to the employer portion of Medicare tax, resulting in  
106 the pro forma payroll tax being overstated by \$1,289.

107 Wage Increases

108 In February 2014, the Company finalized labor contract negotiations with IBEW  
109 57 Combustion Turbine (“CT”). The Wage and Benefits adjustment updates the  
110 wage increase showing in Exhibit RMP\_\_\_(SRM-3) on Page 4.2.5 to the final  
111 contractual amounts. The increase previously shown in February 2014 as 1.25  
112 percent in Exhibit RMP\_\_\_(SRM-3) has been moved to March 2014 and increased  
113 to 1.65 percent. In addition, the IBEW 57 CT increase in Feb 2015 has been  
114 decreased from 2.75 percent to 2.0 percent. These changes result in an incremental  
115 increase to Utah-allocated utility labor by \$1,115.

116 Annual Incentive Plan

117 This adjustment updates the filing for the actual calendar year 2013 Annual  
118 Incentive Plan (“AIP”) payouts. The actual amount is now known and has been  
119 reflected in the Company's updated adjustment. This effectively increases labor  
120 expense on Utah-allocated utility labor by \$102,501.

121 Pension Expense

122 This adjustment updates the Test Period pension expense to reflect an updated  
123 actuarial report provided by Towers Watson to the Company for the Calendar year  
124 2014. The impact of this adjustment reduces the Company’s pension expense in the  
125 rebuttal filing by \$213,717 and is consistent with the adjustment that was proposed  
126 in the direct testimony of Mr. Higgins. However, the Company has a concern that  
127 this type of adjustment is generally only made when the projections decrease. The  
128 Company respectfully requests that the Commission require the update as a policy  
129 in future cases, regardless of the direction of the update. Ms. Ramas also proposed  
130 an adjustment to the Company’s pension expense that the Company did not accept.  
131 Reasons for the rejection of Ms. Ramas’ adjustment are discussed later in my  
132 testimony.

133 Post-retirement Benefit Expense

134 This adjustment updates the Test Period level post-retirement benefits expense to  
135 reflect the impact of the Company’s revised calendar year 2014 plan expense. This  
136 adjustment reduces the Company’s expense in the rebuttal filing by \$122,869, and  
137 is also consistent with the adjustment proposed in the direct testimony of Mr.  
138 Higgins.

139 401(k) Administration Costs

140 Ms. Ramas stated that 401k administrative costs were abnormally high during the  
141 12 months ended June 30, 2013 (the “Base Period”), proposing to normalize these  
142 costs over a three-year period to reduce volatility caused by credits from the 401(k)  
143 plan administrator coming through intermittently. This adjustment normalizes Test  
144 Period 401(k) administration costs to reflect a typical level as recommended by Ms.  
145 Ramas, resulting in a reduction of labor expense by \$74,553 on a Utah-allocated  
146 basis.

147 Severance Expense

148 Severance expense was removed from the Base Period as recommended by Ms.  
149 Ramas, decreasing the Test Period labor expense by \$109,060. The Company  
150 agrees to remove severance expense from the case, but reserves the option to  
151 include severance expense in future filings.

152 **12.4 REC Revenue**

153 **Q. Does Exhibit RMP\_\_\_(SRM-1R) include an adjustment to revenue associated**  
154 **with sales of the Company’s Renewable Energy Credits (“REC”)?**

155 A. Yes. The Company provided an updated REC revenue forecast in its 1<sup>st</sup>  
156 Supplemental response to data request UAE 2.2. The updated REC revenue forecast  
157 contained additional known REC sales volumes and prices. The Company  
158 incorporated the updated REC revenue forecast in the rebuttal case, consistent with  
159 the recommendations of Ms. Ramas, Mr. Davis and Mr. Higgins. This update  
160 decreases the revenue requirement by \$427,155.

161 **12.5 REC Revenue 10 Percent Incentive**

162 **Q. Please explain the 10 percent incentive adjustment associated with REC**  
163 **revenues in this case.**

164 A. The Stipulation in Docket No. 11-035-200 (“2012 Stipulation”) specified that the  
165 Company would be allowed to retain 10 percent of the revenues obtained from sales  
166 of RECs incremental to the forecast REC revenue included in that case of \$25  
167 million through May 31, 2013, and thereafter incremental to the revenues received  
168 under contracts entered into after July 1, 2012 included in Confidential Exhibit B  
169 to the 2012 Stipulation. The Company did not account for the 10 percent incentive  
170 in the original filing with the intention of including it in the RBA filing. Ms. Ramas  
171 and Mr. Davis point out that accounting for the 10 percent incentive in the general  
172 rate cases sets the amount of REC revenue included in base rates at a more accurate  
173 level, avoiding carrying charges on this amount. Therefore, the Company revised  
174 the REC revenue adjustment in this case to account for the 10 percent incentive.  
175 The Company calculated the incentive by taking 10 percent of the Utah allocated  
176 REC revenue during the Test Period, i.e., \$2,449,852, which produces a \$244,985  
177 decrease in Utah-allocated REC revenues.

178 **12.6 Special Contract Revenues**

179 **Q. Please summarize the adjustment proposed by Mr. Higgins related to Special**  
180 **Contract Revenues.**

181 A. Mr. Higgins recommends that the Company adjust revenues in this case for Special  
182 Contract 1, which is subject to a 1.93 percent base rate increase on January 1, 2015,  
183 per the terms of the contract. Mr. Higgins states that the 1.93 percent change needs

184 to be applied to the Special Contract 1 pro forma revenue estimated by the  
185 Company to properly reflect Test Period level revenues. Mr. Higgins' adjustment  
186 adds \$268,722 in revenue, calculated as approximately half of the annualized  
187 January 1, 2015 increase based on the proportion of kilowatt-hours projected for  
188 Special Contract 1 for the period January through June 2015, relative to total Test  
189 Period kilowatt-hours for this customer as forecast by the Company.

190 **Q. Did the Company revise the Test Period revenues to incorporate the additional**  
191 **revenue from the Special Contract 1 increase as recommended by Mr.**  
192 **Higgins?**

193 A. Yes, the Company incorporated Mr. Higgins' recommended adjustment, adding  
194 \$268,722 of revenues to the Test Period. Details of this adjustment are contained  
195 on page 12.6 of Exhibit RMP\_\_\_\_(SRM-2R).

#### 196 **12.7 Sub-lease Revenue and 12.8 Lease Expense**

197 **Q. Did any intervening party propose an adjustment with respect to the**  
198 **Company's sub-lease revenues and lease expense?**

199 A. Yes. Mr. Davis proposed the removal of expired sub-lease revenues and lease  
200 expenses from the Test Period. His adjustment removed \$196,080, or \$83,276  
201 Utah-allocated, of sub-lease rental income associated with the Wilsonville capital  
202 lease. Mr. Davis also recommends the removal of total-Company lease expense  
203 associated with the 1033 Building lease in the amount of \$256,574, the Wilsonville  
204 lease in the amount of \$227,736 and the Keystone Aviation Hanger lease for  
205 \$4,250. The Wilsonville Distribution Center lease and the 1033 Building lease  
206 expired before the beginning of the Test Period and the need for space in both cases

207 was absorbed elsewhere with no additional expense. In addition, 14 monthly  
208 payments for the Keystone Aviation Hangar were inadvertently included in the  
209 Base Period.

210 **Q. Does the Company agree with the proposed adjustment to sub-lease revenue**  
211 **and lease expense?**

212 A. Yes, the Company finds Mr. Davis' adjustment to be reasonable as these items do  
213 not reflect ongoing revenues or expenses. This adjustment is located on pages 12.7  
214 and 12.8 of Exhibit RMP\_\_\_(SRM-2R).

215 **Q. Did the Company find any small corrections to Mr. Davis' adjustment**  
216 **calculation?**

217 A. Yes. Mr. Davis removed the two months of Keystone Aviation Hangar expense on  
218 a System Overhead ("SO") factor, but the expense was recorded in unadjusted  
219 results on a System Generation ("SG") factor. The Company correctly uses the SG  
220 allocation factor in its rebuttal adjustment.

## 221 **12.9 Challenge Grants**

222 **Q. Please describe the adjustment proposed by Mr. Orton with regards to**  
223 **challenge grants.**

224 A. Mr. Orton removes challenge grants booked by the Company during the Base  
225 Period.

226 **Q. Does the Company agree to remove challenge grants as proposed by Mr. Orton**  
227 **in this case?**

228 A. Yes. The Company has included an adjustment to remove the challenge grants from  
229 the filing as shown on page 12.9 of Exhibit RMP\_\_\_(SRM-2R). This reduces the  
230 Company's O&M expense by \$48,103.

231 **Q. Why does this amount differ from the \$158,750 amount removed by Mr. Orton**  
232 **in his direct testimony?**

233 A. During the Base Period, the Company booked a total of \$158,750 associated with  
234 challenge grants. However, the Company directly assigns these amounts to the  
235 individual states, and Mr. Orton incorrectly included the total Company amount  
236 and not the Utah amount in his adjustment. Only \$48,103 of the \$158,750 total was  
237 assigned to Utah. Therefore, the Company revised the amount of challenge grants  
238 removed to accurately reflect the amount included in the original filing.

#### 239 **12.10 Uncollectible Accounts Expense**

240 **Q. Please describe the adjustment proposed to the Company's uncollectible**  
241 **accounts expense.**

242 A. On August 2, 2013, the Commission approved an update to Electric Service  
243 Regulation No. 3 resulting in the direct assignment of Collection Agency fees to  
244 individual delinquent accounts. Due to this change, the Company agreed in its  
245 response to data request OCS 4.12 to adjust the uncollectible expense in rebuttal.  
246 Mr. Thomson, Ms. Ramas and Mr. Higgins propose an adjustment to the  
247 Company's uncollectible expense in the amount of \$449,965, representing the  
248 \$434,331 for costs associated with collection fees escalated for inflation.

249 **Q. Does the Company agree that an adjustment is warranted to uncollectible**  
250 **expense?**

251 A. Yes. However, the full amount of the uncollectible expense savings will not be  
 252 realized during the Test Period. Table 3 below shows the projected fee savings by  
 253 calendar year. Because the assignment of collection agency fees to delinquent  
 254 accounts only applies to new arrearages, the Company does not expect to fully  
 255 eliminate collection agency fees until 2017.

**Table 3**

Year	Projected Fee Savings
2014	\$234,103
2015	\$358,680
2016	\$387,106
2017	\$401,738
<b>Total</b>	<b>\$1,381,627</b>

256 Therefore the Company’s rebuttal filing includes an adjustment on page 12.10 of  
 257 Exhibit RMP\_\_\_(SRM-2R) in the amount of \$291,521, calculated as the average  
 258 of calendar year 2014 and 2015 savings escalated for inflation.

259 **12.11 Condit Hydroelectric Dam Decommissioning Expense Correction**

260 **Q. Please describe the adjustment the Company made to correct the original**  
 261 **filing related to the Company’s Miscellaneous Asset Sales and Removals**  
 262 **adjustment in your direct testimony Exhibit RMP\_\_\_(SRM-3) on Page 8.12.**

263 A. In the Company’s original filing, the plant balances and associated expenses related  
 264 to the Condit dam were removed in the Miscellaneous Asset Sales and Removals  
 265 adjustment since the plant is no longer in service. As part of the adjustment, the  
 266 Company inadvertently removed \$2,224,227 in depreciation expense that was not  
 267 associated with the Condit dam. Upon review, this expense represents the accrual

268 of the hydro decommissioning for several of the Company's hydro plants and  
269 should not have been removed. The hydro decommissioning detail can be found in  
270 RMP\_\_\_\_(SRM-3) on page 6.3.9. Page 6.3.9 shows the west side Base Period  
271 accruals total of \$2,224,227, the amount incorrectly removed as part of the Condit  
272 plant adjustment on page 8.12. Since the hydro decommissioning costs are an  
273 expense related to assets providing service to customers, the Company has made an  
274 adjustment to correct the Condit dam removal adjustment. This correction increases  
275 Utah's depreciation expense by \$948,151. Supporting detail for this adjustment can  
276 be found on page 12.11 of Exhibit RMP\_\_\_\_(SRM-2R).

#### 277 **12.12 Lobbying Expenses**

278 **Q. Please describe the adjustment Mr. Orton makes with respect to lobbying**  
279 **expenses incurred by the Company.**

280 A. Mr. Orton suggests that the portion of membership dues paid by the Company to  
281 Edison Electric Institute ("EEI") and United Telecom Council ("UTC") that relates  
282 to lobbying efforts be removed from the revenue requirement. He recommends an  
283 adjustment to decrease the revenue requirement by \$89,337.

284 **Q. Does the Company agree with Mr. Orton that lobbying expenses should be**  
285 **excluded in customer rates?**

286 A. Yes. The Company agrees that expenses incurred for lobbying activities should not  
287 be included in rates to be recovered from customers. However, the majority of the  
288 adjustment proposed by Mr. Orton was for costs that were not included in the rate  
289 case. The Company removed \$295 in lobbying expenses from the revenue  
290 requirement requested in this case.

291 **Q. Please describe why the Company's adjustment for lobbying expense is less**  
292 **than that proposed by Mr. Orton.**

293 A. The amount of UTC dues the Company paid in the Base Period was \$13,348. The  
294 percentage of the expenses attributable to lobbying activities was five percent.  
295 Since all of the UTC dues the Company paid in the Base Period were booked above-  
296 the-line, five percent was removed in this adjustment, which is \$295 on a Utah-  
297 allocated basis.

298 **Q. Does the Company agree with Mr. Orton's adjustment to reduce EEI dues**  
299 **expense in the Test Period by \$209,658?**

300 A. No. The lobbying expenses associated with EEI were booked below-the-line and  
301 are not included in the Company's filing. Since Mr. Orton's adjustment is removing  
302 an expense that is not included in the original filing, the EEI portion of his  
303 adjustment is erroneous and should be rejected.

#### 304 **12.13 Reduction to Affiliate Charges**

305 **Q. Please describe the adjustment proposed by Ms. Ramas related to the recent**  
306 **NV Energy acquisition.**

307 A. Due to the recent acquisition of NV Energy, Inc., certain charges associated with  
308 MidAmerican Energy Holding Company, now "Berkshire Hathaway Energy," and  
309 MidAmerican Energy Company that were previously allocated to PacifiCorp will  
310 now be allocated to NV Energy as shown in Ms. Ramas' exhibit OCS 3.9D. This  
311 reduces the costs charged to PacifiCorp by an estimated \$1,014,774 on a total-  
312 Company basis. Ms. Ramas recommends adjusting the Company's revenue  
313 requirement accordingly.

314 **Q. Does the Company agree that an adjustment is necessary for this item?**

315 A. Yes. It is appropriate to reflect the impact of the transaction. The Company  
316 incorporated Ms. Ramas' adjustment as shown on page 12.13 of my rebuttal exhibit.

317 **12.14 Cottonwood Coal Lease**

318 **Q. Please summarize the Cottonwood Coal Lease adjustment proposed by Mr.**  
319 **Davis.**

320 A. The Company provided revised actual development costs for the year ended 2013  
321 for the Cottonwood Coal Lease in its response to data request DPU 16.1.  
322 Correspondingly, RMP\_\_\_(SRM-3), page 8.7.1 was updated with the revised July  
323 2013 through December 2013 development cost numbers and ensuing adjustments  
324 through 2014, which resulted in a downward adjustment to Test Period results in  
325 Plant Held for Future Use of \$596,835 on a total Company basis, and \$250,502 on  
326 a Utah-allocated basis.

327 **Q. Does the Company accept Mr. Davis' Cottonwood Coal Lease adjustment?**

328 A. Yes. Mr. Davis' adjustment utilizes the most up-to-date costs for the Cottonwood  
329 Coal Lease. This adjustment reduces the revenue requirement by \$27,140.

330 **12.15 Bridger/Trapper Update**

331 **Q. Please explain Mr. Croft's adjustment to Bridger Mine and Trapper Mine rate**  
332 **base.**

333 A. Mr. Croft proposes to update the Bridger Mine and Trapper Mine rate base balances

334 and the Trapper mine final reclamation liability balance with actual data through  
335 March 2014, replacing projected data through this period used in the original filing.

336 **Q. Does the Company agree with this adjustment?**

337 A. Yes. The Company has reflected this adjustment in determining the revised results  
338 of operations for the Test Period. This adjustment increases the revenue  
339 requirement by \$86,899, and is detailed on page 12.15 in Exhibit RMP\_\_\_\_(SRM-  
340 2R).

#### 341 **12.16 Lake Side 2 Prepaid Overhaul**

342 **Q. Please explain the correction to Lake Side 2 prepaid overhaul capital costs**  
343 **recommended by Ms. Ramas and Mr. Croft.**

344 A. Ms. Ramas and Mr. Croft correctly point out in each of their testimony that the  
345 Company includes overhaul prepayments in rate base as part of the miscellaneous  
346 rate base adjustment. These are pre-paid amounts associated with overhaul costs  
347 that are ultimately capitalized as plant-in-service when the overhaul is completed.  
348 The Miscellaneous Rate Base adjustment on page 8.7 of Exhibit RMP\_\_\_\_(SRM-3)  
349 included the projected average Test Period prepayments for the Lake Side U11 and  
350 U12 combustion overhaul. The associated capital costs were included in plant-in-  
351 service with an in-service date of March 2015 in the Company's Pro Forma Plant  
352 Additions and Retirements adjustment on Page 8.6.23 of Exhibit RMP\_\_\_\_(SRM-  
353 3). In reviewing the details, Ms. Ramas and Mr. Croft noted that there is a two  
354 month period during which the capital costs were included in both the prepayments  
355 and in plant-in-service and suggest that the Company reduce the plant-in-service  
356 along with the depreciation expense and accumulated depreciation to correct this.

357 **Q. Does the Company agree with this adjustment?**

358 A. Yes, with a few minor corrections. In its response to data request OCS 19.11, the  
359 Company agreed that the capital costs associated with Lake Side U11 and U12  
360 Combustion Overhaul projects should reflect an in-service date of May 2015.  
361 However, the Company's calculation correctly compares depreciation expense  
362 between the March 2015 in-service date depreciation and the May 2015 in-service  
363 date depreciation to arrive at the appropriate amount. Depreciation expense was  
364 \$280,689 using the March 2015 in-service date and \$120,295 using the May 2015  
365 in-service date. The Company adjusted the depreciation expense by \$160,394,  
366 representing the total Company difference between the two in-service dates. The  
367 Company utilized the same method in calculating the adjustment to depreciation  
368 reserve. Depreciation reserve was \$49,352 based on a 13-month average using the  
369 March 2015 in-service date, and \$12,338 based on a 13-month average using the  
370 May 2015 in-service date on a total Company basis. The Company adjusted the  
371 depreciation reserve by \$37,014, which represents the difference between the two  
372 in-service dates. This correction to the capital database will reduce pro forma rate  
373 base by \$5,037,792, pro forma depreciation expense by \$160,394, and pro forma  
374 depreciation reserve by \$37,014 on a total Company basis. This equates to a  
375 reduction in rate base of \$2,147,526 and a decrease in Depreciation Expense of  
376 \$68,373 on a Utah jurisdictional basis. The overall impact of this adjustment  
377 decreases the revenue requirement by \$299,620 and is detailed on page 12.16 of  
378 my rebuttal exhibit.

379 **Q. Did Mr. Croft raise additional concerns regarding the Lake Side 2 Overhaul**

380 **Project Costs?**

381 A. Yes. In his direct testimony, Mr. Croft states that the Company provided two  
382 schedules showing the budgeted prepayment dollars for the Lake Side 2 plant. The  
383 schedules show how dollars are built up in this account and then transferred to  
384 plant-in-service. In addition to the correction addressed above, Mr. Croft also states  
385 that the amount being transferred to capital based on the overhaul schedule is only  
386 \$28,044,166, while the capital database shows \$32,745,646 being placed in service  
387 for the same project. Therefore, in addition to correcting for the two-month overlap,  
388 Mr. Croft also proposes that the Company reduce the amount of capital transferred  
389 from prepayments to capital.

390 **Q. Does the Company agree with Mr. Croft's additional adjustment to Lake Side**  
391 **2 Overhaul amounts?**

392 A. No. Mr. Croft erroneously assumed that the full cost of the overhaul was reflected  
393 in the prepaid account, which is wrong. The capital database value of \$32,745,646  
394 includes the total amount of the capital project that is expected to be placed in  
395 service at the time of the overhaul. The \$28,044,166 reflects the prepaid balance  
396 only. When the capital project is placed in service it will include other items such  
397 as an outage service fee, capital surcharge and Allowance for Funds Used During  
398 Construction ("AFUDC"). The actual amount that will be placed into service is  
399 \$32,745,646 and should not be reduced as recommended by Mr. Croft in this case.

400 **12.17 Jim Bridger Unit 3 small projects**

401 **Q. Please explain Mr. Croft's adjustment to Jim Bridger Unit 3 small projects.**

402 A. Through discovery, the Company provided its capital database that reflected 46

403 small projects under \$1 million associated with the Jim Bridger Unit 3 overhaul  
404 that were scheduled to occur during the months of May and June of 2015. Because  
405 the overhaul has been delayed to November 2015, which is outside the Test Period,  
406 Mr. Croft proposes the removal of these projects.

407 **Q. Does the Company agree with the adjustment?**

408 A. Yes, the Company agrees to remove these items from the rate case. This adjustment  
409 reduces Utah's revenue requirement by \$43,600 and can be found on page 12.17 of  
410 my rebuttal exhibit.

411 **12.18 through 12.25 Various Capital Adjustments**

412 **Q. Please describe the various capital adjustments the Company made in its**  
413 **rebuttal filing in response to the requests by the intervening parties.**

414 A. Mr. Hahn and Mr. Croft recommended numerous adjustments to the Company's  
415 capital projects in each of their direct testimony. The Company carefully reviewed  
416 the testimony and exhibits filed by Mr. Hahn and Mr. Croft to determine the validity  
417 of their recommendations. This section of my testimony summarizes the  
418 adjustments recommended by Mr. Hahn and Mr. Croft which the Company  
419 considers to be valid. Later in my testimony, I present the Company's response to  
420 the recommended adjustments that I disagree with and have not incorporated into  
421 the rebuttal case.

422 12.18 FC200 to FC300 Replacement

423 This adjustment revises the revenue requirement to correctly reflect Utah's portion  
424 of the FC200 to FC300 replacement project at \$279,160 as proposed by Mr. Hahn.  
425 The impact on the case reduces the revenue requirement by \$34,782, including a

426 correction for a minor formula error found in Mr. Hahn's depreciation expense  
427 calculation. Page 12.18 of my rebuttal exhibit contains the details of this  
428 adjustment.

429 12.19 Mill Fork South Lease Acquisition

430 This adjustment removes the Mill Fork South Lease from the projected plant-in-  
431 service, which was proposed by Mr. Hahn. The impact on the case reduces revenue  
432 requirement by \$76,098, and is shown on page 12.19 of my rebuttal exhibit.

433 12.20 Vehicle Replacement

434 This adjustment removes the Vehicle Replacement project from the projected plant-  
435 in-service, as proposed by Mr. Hahn. The impact of this adjustment reduces revenue  
436 requirement by \$2,018 and is included in my rebuttal exhibit on page 12.20.

437 12.21 DPU Updates Adjustment

438 Mr. Croft sponsors the DPU Updates adjustment, which replaces the forecast major  
439 capital additions data in the Company's original filing with actual data for the  
440 months of July 2013 through February 2014. The adjustment also updates for  
441 changes to the forecast provided by the Company in its response to data request  
442 DPU 35.4. Changes to the Company's major plant additions forecast include the  
443 removal of projects that have been canceled or delayed past the Test Period,  
444 changes to in-service dates and the addition of projects that were not included the  
445 original filing but are now expected to be placed in service during the Test Period.  
446 This adjustment includes the removal of condemnation settlement payments as  
447 proposed by Ms. Ramas. The impact of these updates is shown on page 12.21 of  
448 my rebuttal exhibit. Collectively, these updates increase the Company's revenue

449 requirement by \$1,404,545. The depreciation expense, depreciation reserve and  
450 deferred tax impacts are accounted for in adjustments 12.25, 12.26 and 12.27.

451 12.22 Big Fork Penstock

452 This adjustment removes the Big Fork Penstock project from the projected plant-  
453 in-service, which was proposed by Mr. Hahn. This adjustment reduces revenue  
454 requirement by \$3,666 and is included in my rebuttal exhibit on page 12.22.

455 12.23 Casper Outer Loop

456 This adjustment revises the Casper Outer Loop project as discussed by Company  
457 witness Mr. Douglas N. Bennion in his rebuttal testimony. Mr. Bennion discusses  
458 the reasons why the Company is revising the Casper Outer Loop project amounts  
459 instead of accepting Mr. Hahn's recommendation to remove it entirely from the  
460 Test Period. The impact of this adjustment reduces revenue requirement by \$6,346  
461 and is included in my rebuttal exhibit on page 12.23.

462 12.24 U3 OH Boiler Waterwall Tube Replacement at Naughton

463 This adjustment revises the U3 OH Boiler Waterwall Tube Replacement at  
464 Naughton project as proposed by Mr. Hahn. The impact of this adjustment reduces  
465 revenue requirement by \$24,260, and is included in my rebuttal exhibit on page  
466 12.24.

467 12.25 Soda Spillway Improvement Project

468 This adjustment removes the Soda Spillway Improvement project because the in-  
469 service date has moved outside the Test Period. The impact of this adjustment  
470 reduces revenue requirement by \$51,206, and is included in my rebuttal exhibit on

471 page 12.25.

472 **12.26 Depreciation Expense and 12.27 Depreciation Reserve Updates**

473 **Q. Please describe the Depreciation Expense and Depreciation Reserve Update**  
474 **adjustments included in your rebuttal exhibit.**

475 A. The Company updated the depreciation expense and reserve amounts to account  
476 for the impacts of the DPU updates adjustment on page 12.22 described above. The  
477 update to depreciation expense results in a revenue requirement increase of  
478 \$920,576 as provided in my rebuttal exhibit on page 12.26. The correlating  
479 adjustment to the depreciation reserve balance decreases the revenue requirement  
480 by \$2,134,179 and is shown on page 12.27.

481 **12.28 Tax Impacts Update**

482 **Q. Please describe the tax impacts update adjustment.**

483 A. This adjustment updates deferred taxes for the changes made to the capital included  
484 in the rebuttal filing.

485 **12.29 Renewable Energy Tax Credit Update**

486 **Q. Why did the Company include an update to the Renewable Energy Tax**  
487 **Credits?**

488 A. The renewable energy tax credit adjustment that was included in the Company's  
489 original filing, Exhibit RMP\_\_\_\_(SRM-3), page 7.3, was updated in the rebuttal case  
490 to be consistent with the NPC Update. The NPC Update reduces the renewable  
491 energy tax credit amount included in the Test Period by \$202. Details are provided  
492 in my rebuttal exhibit on page 12.29.

493 **12.30 Contingency Reserve**

494 **Q. Please explain the adjustment to contingency reserves as proposed by Mr.**  
495 **Higgins.**

496 A. Mr. Higgins proposes to update project contingency reserves provided in this case  
497 to reflect updated contingency amounts provided in the Company's response to data  
498 request UAE 11.1. The update produces a \$3.6 million downward adjustment from  
499 \$11.8 million to \$8.2 million, reducing the revenue requirement by \$195,247.

500 **Q. Does the Company agree with this adjustment?**

501 A. Yes. Mr. Higgins adjusts the contingency reserves to a more recent and accurate  
502 amount and is incorporated into the Company's rebuttal revenue requirement as  
503 shown on page 12.30 of my rebuttal exhibit.

504 **Q. Does the Company's acceptance of Mr. Higgins' proposed adjustment resolve**  
505 **all of Mr. Higgins' concerns related to contingency reserves?**

506 A. No. Mr. Higgins raised additional issues with the principle of using contingency  
507 reserves. The rebuttal testimony of Company witness Mr. Chad A. Teply addresses  
508 Mr. Higgins' ratemaking policy concerns.

509 **Condemnation Settlements**

510 **Q. Please describe the condemnation settlement adjustment proposed by Ms.**  
511 **Ramas.**

512 A. Ms. Ramas proposes removing condemnation settlements associated with the  
513 Populus-Terminal 345 kV line.

514 **Q. What is the Company's position with respect to the adjustments to remove**  
515 **condemnation settlement costs as proposed by Ms. Ramas?**

516 A. The Company accepts Ms. Ramas' adjustment related to the condemnation  
517 settlements regarding the Populus-Terminal 345 kV line. This adjustment was also  
518 included in the DPU updates, and has therefore been removed as part of adjustment  
519 12.21, DPU Updates Adjustment.

520 **Carbon Non-Labor O&M Expense**

521 **Q. Please describe the proposed adjustments to the non-labor O&M expense**  
522 **associated with the Company's Carbon plant.**

523 A. The Company's original filing included approximately \$4,472,000 in non-labor  
524 O&M expense associated with the Carbon plant. Since the Carbon plant is  
525 scheduled to be retired in April 2015, both Ms. Ramas and Mr. Higgins claim that  
526 leaving this expense in the case will cause the expense to continue to be included  
527 in rates beyond the point in time when Carbon is providing service. Ms. Ramas and  
528 Mr. Higgins agree that the Company should be able to recover the non-labor O&M  
529 expenses for the Carbon plant until it is removed from service and suggest that a  
530 mechanism be put in place which allows the Company to recover the costs, but  
531 prevents customers from continuing to pay these costs after the plant is retired.

532 **Q. Please respond to Ms. Ramas' and Mr. Higgins' proposal.**

533 A. The Company agrees in principle with Ms. Ramas' and Mr. Higgins' observation  
534 that if these costs are recovered in base rates, they will continue to be charged to  
535 customers after the Carbon plant is retired and they are no longer being incurred,  
536 until superseded by rates established in a subsequent rate case.

537 **Q. How could this be remedied?**

538 A. As noted by Mr. Higgins, the Test Period Carbon O&M expense could be moved

539 from base rates to a rider that would expire after 12 months. Another option would  
540 be to convert the Test Period expenses into a regulatory asset and recover them over  
541 a specified period of time similar to the Carbon-specific deferred accounting  
542 treatment currently being used to recover plant removal costs and the remaining  
543 depreciation balance. The Company prefers the method proposed by Ms. Ramas.  
544 The amount in rates resulting from Carbon O&M expense could be recorded as an  
545 offset in the Carbon Removal Cost regulatory asset each month. This monthly offset  
546 to the regulatory asset would continue until the rates established in the next general  
547 rate case go into effect.

548 **Q. Does the Company agree with Ms. Ramas' adjustment?**

549 A. In principle, yes. However, the \$4.4 million represents the amount that the  
550 Company needs to recover related to the nine months the plant will be in service  
551 during the Test Period. Based on the Test Period, this amount will be recovered  
552 over a twelve month period (The \$4.4 million is included as an annual amount in  
553 the revenue requirement). Therefore, in order to allow the Company the opportunity  
554 to recover the \$4.4 million related to Test Period expenses, the Company must  
555 include the Carbon costs in rates for twelve months.

556 **Analysis and Response to Adjustments not Included in the Company's Case**

557 **Annual Incentive Plan**

558 **Q. Please explain the adjustment to the Company's AIP proposed by Mr. Oman**  
559 **and Mr. Meyer.**

560 A. Mr. Oman adjusts the calendar year 2013 AIP payout percentage to the average of  
561 the calendar year 2009 through 2012 payout percentages. Mr. Meyer proposes a 33

562 percent reduction in AIP.

563 **Q. Does the Company agree with either of these proposed adjustments?**

564 A. No. There is no basis for Mr. Oman's indiscriminate adjustment. The Company paid  
565 out the AIP at 100 percent in 2013. The AIP program has been established to put a  
566 portion of employees' total compensation at risk, making it dependent on employee  
567 performance. To reduce the percentage paid out in 2013 simply because it is  
568 different from the prior years is inappropriate because the Company already used a  
569 three-year average to calculate AIP in the original filing to effectively smooth out  
570 differences from year to year. Proposing a downward adjustment on the highest  
571 value in a set of data, changes the methodology from an average, as approved in  
572 prior Utah general rate cases, to using the lowest percentage payout. Mr. Oman  
573 gives no justification for this change in methodology, and provides no evidence that  
574 moving away from an average is appropriate.

575 Mr. Meyer's adjustment to reduce the AIP percentage is based on nothing  
576 more specific than his general criticism of the program, with no support for his  
577 percentage disallowance. The Company requested Mr. Meyer provide support for  
578 the 33 percent reduction in data request RMP 2.1. When asked for the basis of the  
579 33 percent, Mr. Meyer's response was "The 33 percent disallowance is a *subjective*  
580 [emphasis added] estimate of the portion of the AIP payments which relate to the  
581 financial goals, lobbying and/or tasks which should be considered normal job  
582 requirements." Mr. Meyer's 33 percent reduction is arbitrary and should be rejected  
583 by the Commission. Further support for the Company's AIP is provided in the  
584 rebuttal testimony of Mr. Erich D. Wilson.

585 **Net Pension and Post-Retirement Welfare Plan Prepaid Asset**

586 **Q. Please summarize the proposed adjustment related to the Company's net**  
587 **pension and post-retirement welfare plan prepaid asset.**

588 A. Dr. Powell, Ms. Ramas and Mr. Higgins disagree with the Company's position that  
589 the net pension and post-retirement welfare plan prepaid asset should be included  
590 in rate base. They propose to reverse the Company's adjustment shown on page  
591 8.14 of Exhibit RMP\_\_\_(SRM-3), which produces a decrease in revenue  
592 requirement of approximately \$7.0 to \$7.5 million

593 **Q. Does the Company agree with this adjustment?**

594 A. No. The Company maintains that this net pension and post-retirement welfare plan  
595 prepaid asset should receive rate base treatment. Company witness Mr. Douglas K.  
596 Stuver provides support for the inclusion of this asset in rate base.

597 **Unclassified Plant (FERC Accounts 106 and 1019)**

598 **Q. Please explain Mr. Croft's adjustment to Unclassified Plant (FERC**  
599 **Account 106).**

600 A. Mr. Croft proposes removing the full amount of the June 2013 balance for  
601 unclassified plant because he believes the unclassified plant balances are already  
602 accounted for in FERC accounts 301 to 399. On lines 160-162 of his testimony,  
603 Mr. Croft defines FERC 106 as "plant that has been placed into service and is  
604 providing benefits to customers but has not technically been classified yet to the  
605 appropriate plant account (Accounts 301 to 399)."

606 **Q. Is the assertion by Mr. Croft that there is a double count of unclassified**

607 **account balance in the JAM accurate?**

608 A. No. This is an erroneous assumption. Mr. Croft simply does not understand how  
609 the Pro Forma Capital Additions adjustment works. The Pro Forma Capital  
610 Additions and Retirements adjustment is calculated by taking the June 2015 13-  
611 month average balance and subtracting the June 2013 13-month average balance.  
612 The amount included in the JAM model is correct.

613 **Q. Has the Company included FERC 106 in prior cases?**

614 A. Yes. The Company has included FERC 106 in all prior rate cases, using both  
615 historic and forecast test periods, in all states. The Company is unaware of anyone  
616 challenging the inclusion of FERC 106 because the unclassified plant is property  
617 that is already in service, and is appropriately included in the case.

618 **Q. Is Mr. Croft's Table 3 showing the flow of unclassified plant correct?**

619 A. No, the flow is correct. However, the numbers in Mr. Croft's table are wrong.

620 **Q. What evidence exists to ensure there is no double counting of unclassified plant  
621 in the Company's filing and that Mr. Croft's table is wrong?**

622 A. There is a reconciliation included with the Pro Forma Capital Additions and  
623 Retirements adjustment in Exhibit RMP\_\_\_\_(SRM-3), page 8.6.2 that ties the total  
624 electric plant in service ("EPIS") from adjustment 8.6 Pro Forma Capital Additions  
625 and Retirements to the "EPIS" balance in the JAM, as seen in Exhibit  
626 RMP\_\_\_\_(SRM-3), page 2.2, line 36. This reconciliation is included to show that all  
627 forecasted EPIS dollars are accounted for and tie to the JAM. This reconciliation  
628 shows the \$25,515,027,180 on Mr. Croft's table, and how it reconciles to the EPIS  
629 total on pages 2.2 and 2.30 Exhibit RMP\_\_\_\_(SRM-3). It is important to remember

630 that unclassified plant is a part of EPIS.

631 **Q. Is the \$87 million unclassified plant referenced in Mr. Croft's table included**  
632 **in the rate case?**

633 A. Yes. However, it is already included as part of the \$25.15 billion amount in Mr.  
634 Croft's Table 3, and should not be included a second time as he is showing in his  
635 table. As can be seen on the reconciliation included with the Pro Forma Capital  
636 Additions and Retirements adjustment in Exhibit RMP\_\_\_\_(SRM-3), page 8.6.2, the  
637 only differences between the \$25.15 billion on the pro forma plant addition sheet  
638 and the total EPIS in the case are mining assets, Little Mountain and an Oregon  
639 solar project. This reconciliation was provided to avoid questions similar to the one  
640 raised by Mr. Croft. If a double count did exist, this reconciliation would not tie to  
641 the JAM.

642 **Q. Does the Company agree with Mr. Croft's assertion that the FERC 106**  
643 **balances are included in the FERC 301 - 399 plant accounts as stated on lines**  
644 **148-150, 210, and 216-218?**

645 A. No. Mr. Croft is wrong. FERC 106 is not included in the FERC 301 - 399 plant  
646 accounts and is also not included in plant additions because the FERC 106 balances  
647 are already in-service. The plant is specifically referred to as unclassified because  
648 it is has not been classified to the 301 - 399 FERC accounts yet.

649 **Q. Did Mr. Croft describe how he came to the conclusion that unclassified plant**  
650 **balances should be removed?**

651 A. According to his direct testimony, Mr. Croft arrived at this conclusion through

652 examination of three key questions: 1) What capital assets are going into service?  
653 2) When are they going into service? and 3) Does the Company's capital database,  
654 depreciation template and JAM accounts 301 to 399 already account for when these  
655 asset go into service and when they are depreciated?

656 **Q. Does the Company agree with Mr. Croft that those are the appropriate**  
657 **questions to ask?**

658 A. Yes. Mr. Croft asked the right questions. The problem is that he did not list the  
659 correct answers, resulting in an incorrect conclusion.

660 **Q. Can you please describe where Mr. Croft erred in his answers to these**  
661 **questions?**

662 A. Mr. Croft erred in his response to the third question. The FERC 106 balances are  
663 part of EPIS. They are included in the beginning balance, and not as part of future  
664 plant additions, because they are already in service. By removing these amounts,  
665 Mr. Croft is removing plant that is already in service.

666 **Q. What is unclassified plant?**

667 A. Unclassified plant is plant which has been placed into service but for which the  
668 final cost analysis to determine which specific FERC accounts to which it should  
669 be charged has not yet been completed. Unclassified plant is a part of EPIS. Usage  
670 of unclassified plant is approved by FERC. The level of detail for unclassified plant  
671 is at the plant function level i.e., steam, hydro, distribution.

672 **Q. What adjustments incorporate the unclassified plant balance?**

673 A. The Depreciation and Amortization Expense, Depreciation and Amortization  
674 Reserve adjustments, and Pro Forma Plant Additions and Retirements incorporate

675 unclassified plant. The June 2013 actual unclassified plant is included to more  
676 accurately calculate the depreciation expense and depreciation reserve. The plant  
677 balances are adjusted each month for forecasted plant additions, retirements and  
678 removals. There is no additional forecasted unclassified plant additions included.

679 **Q. Has the Company reviewed the FERC 1019 adjustment, proposed by Mr.**  
680 **Croft?**

681 A. Yes.

682 **Q. Are there any computational or methodological errors in the adjustment?**

683 A. Yes. FERC account 1019 was already removed in the DPU's unclassified plant  
684 adjustment. An additional adjustment to remove FERC 1019 balances would result  
685 in a double count.

686 **Q. Please explain how this results in a double count.**

687 A. The \$87 million removed in the unclassified plant adjustment included the FERC  
688 1019 balance. Therefore, the 1019 adjustment is duplicative.

689 **Q. What is FERC account 1019 used for?**

690 A. At the end of each quarter, the Company estimates the amount of unprocessed  
691 retirements to ensure the asset account balances are accurate.

#### 692 **Miscellaneous General Expense - Civic Memberships**

693 **Q. Please describe Mr. Orton's proposed adjustment to remove expenses for**  
694 **Civic Memberships.**

695 A. Mr. Orton proposes to remove from the Test Period expenses associated with dues  
696 paid by the Company to chamber of commerce organizations. He asserts that the  
697 Company's participation in these organizations does not provide a direct,

698 quantifiable benefit to customers, and is not necessary to the Company's efforts of  
699 providing safe and reliable electric service to customers.

700 **Q. Does the Company agree with Mr. Orton's assessment?**

701 A. No. Contrary to Mr. Orton's perspective, Company participation in these  
702 organizations does provide tangible benefits to customers. The Company is linked  
703 to the economic viability of the communities it serves and to the actions taken by  
704 community leaders with respect to Company operations. A primary purpose of  
705 membership in these organizations is to foster and strengthen relationships with key  
706 civic and business leaders in the community. Positive working relationships help  
707 streamline Company efforts in making necessary investments to provide safe and  
708 reliable electric service to customers.

709 As an example, the Company is a member of the Utah Valley Chamber of  
710 Commerce and is supporting the chamber in economic development activities for  
711 siting new business expansion. By participating in this initiative, Rocky Mountain  
712 Power can aid in identifying more favorable sites where electrical service is more  
713 readily available than less desirable sites. By being part of the process, the  
714 Company is able to provide better service to customers at potentially lower costs.

715 Participation also allows the Company to develop and build relationships  
716 within the community. This helps employees to speak on a regular basis and be  
717 available for members of these organizations, who are also Rocky Mountain Power  
718 customers, to discuss issues of concern such as service, billing or programs, so that  
719 the employee can quickly and more easily resolve these issues without undue  
720 disturbance to the customer. Many of these organization members are key

721 customers and run businesses that are major employers in the community. These  
722 relationships are invaluable for employees to understand business needs and  
723 concerns, and respond appropriately.

724 Another example of the benefit of membership in these organizations is with  
725 the Salt Lake Chamber of Commerce. The Company has served on various  
726 committees within the chamber which has helped to educate and inform members  
727 of the chamber on key issues facing the Company such as new investments in the  
728 power system to plan for reliable service and new customer growth and enlist their  
729 support for programs to help customers use energy more efficiently.

730 Mr. Orton provides little demonstrable evidence to support his claim that  
731 these costs provide no quantifiable benefit to customers, or that regulatory bodies  
732 in other jurisdictions have excluded these types of costs from rate recovery. For  
733 these reasons, the Company recommends that the Commission not adopt Mr.  
734 Orton's proposed adjustment to chamber of commerce dues.

735 **Demand Side Management, Blue Sky and Project Silver Expenses**

736 **Q. Please explain the adjustment to Demand Side Management, the Blue Sky**  
737 **program, and Project Silver as proposed by Mr. Orton.**

738 A. Mr. Orton proposes to remove Demand Side Management and Blue Sky costs  
739 charged to FERC account 921 as they are recovered under separate surcharges. Mr.  
740 Orton also proposes to remove any Project Silver costs charged to FERC account  
741 921 on the grounds that they relate to the Nevada Energy acquisition and should  
742 have been recorded below-the-line.

743 **Q. Are there any computational errors made by Mr. Orton in his adjustment?**

744 A. Yes. Mr. Orton's adjustment considers only one side of the entry for Demand Side  
745 Management, Blue Sky, and Project Silver expenses charged to FERC account 921.  
746 When the expenses were charged to FERC account 921, an offsetting entry was  
747 then recorded during the same period to settle the expense to a below-the-line  
748 account. The result is a net-zero charge to FERC account 921 for Demand Side  
749 Management, Blue Sky, and Project Silver expenses.

750 **Q. Does the Company agree with the adjustment to Demand Side Management,**  
751 **Blue Sky and Project Silver as proposed by Mr. Orton?**

752 A. No. As noted above, this is a one-sided adjustment and singles out only debit  
753 entries. The charges only flow through FERC account 921 and are eventually  
754 settled into the correct order number in the same period. Accepting Mr. Orton's  
755 adjustment would effectively remove costs from the revenue requirement that were  
756 never included in the case in the first place.

757 **Pension Expense/Post-retirement Benefit Expense**

758 **Q. Earlier in your testimony you accepted Mr. Higgins' proposed adjustment to**  
759 **pension and post-retirement benefit expense but rejected the adjustment**  
760 **proposed by Ms. Ramas. How does Ms. Ramas' adjustment differ from the**  
761 **one proposed by Mr. Higgins?**

762 A. Mr. Higgins uses the method utilized by the Company in this proceeding. He  
763 substitutes the updated 2014 forecast number for the earlier one used in the filing.  
764 Ms. Ramas however, takes the difference between the updated 2014 forecast and  
765 the original 2014 forecast used in the filing. This is flawed logic because the filing  
766 is based on the Test Period, 12 months ending June 2015. Since the actuarial reports

767 cover calendar years, the Company based its forecast on a 50/50 split of 2014 and  
768 2015. Ms. Ramas treats the forecast pension expense as if the Company were using  
769 12 months ending December 2014 as the Test Period. On line 277 of her testimony,  
770 Ms. Ramas gives the reason for this treatment as:

771 “Absent RMP providing updated estimates of the 2015 net periodic benefit  
772 costs from its actuarial firm as requested in OCS Data Request 3.16, I  
773 recommend that Test Year pension costs be reduced by the reduction in the  
774 projected 2014 net periodic benefit costs.”

775 This is not valid and should be rejected by the Commission. 2015 estimates of the  
776 net periodic benefit costs were not available. To then assume the difference between  
777 the amount originally filed and the updated amount is somehow equivalent to the  
778 2014 difference is unfounded. In actuarial projections, each year can be very  
779 different. Pension expenses for 2015 are already considerably lower than 2014, so  
780 it would be invalid to assume the estimate would decrease by the same dollar  
781 amount.

782 The Company accepts Mr. Higgins’ adjustment because it correctly  
783 implements the methodology utilized by the Company to update expense forecasts,  
784 as stated above. The Company rejects the interpretation offered by Ms. Ramas.

785 **Legal Expenses**

786 **Q. Please describe the legal expense adjustment proposed by Mr. Higgins, Ms.**  
787 **Ramas and Mr. Thomson.**

788 A. Mr. Higgins proposes removing from the case legal costs related to the USA Power  
789 and Deseret Power disputes. Ms. Ramas proposes removing legal expenses related  
790 to the USA Power dispute. Mr. Thomson also proposes to normalize legal costs  
791 related to the Wood Hollow fire by escalating and amortizing them over five years.

792 **Q. What is the Company's position with respect to the adjustments to remove**  
793 **legal costs as proposed by Mr. Higgins, Ms. Ramas and Mr. Thomson?**

794 A. The Company opposes these adjustments. The level of legal costs included in the  
795 case are the level the Company anticipates in the future.

796 **Q. Why is it appropriate for the Company to include legal costs escalated to the**  
797 **test period?**

798 A. These costs are ordinary and typical business costs necessary for any business to  
799 operate effectively. The Company has no control over the type of lawsuits that are  
800 filed against it, just as it has no control over a jury verdict. The Company will  
801 continue to incur legal costs necessary to defend itself from third parties or power  
802 plant joint-owners in the future, regardless of whether the lawsuits have any merit  
803 and whether a jury verdict goes against the Company.

804           Simply stated, the Company will always incur legal expenses to deal with a  
805 variety of issues. Not one of Mr. Higgins, Ms. Ramas, nor Mr. Thomson points to  
806 anything that suggests the Company will have fewer legal expenses on a going-  
807 forward basis. In fact, Table 4 below summarizes legal expenses for the last four  
808 years. The results show the 12 months ended June 2015 legal costs forecast  
809 included in the filing is comparable to prior years, is almost the exact amount of the  
810 four-year average, and is at a reasonable ongoing level, particularly when  
811 considering the ongoing litigation.

**Table 4**

<u>Period</u>	<u>External Legal Expense<sup>(1)</sup></u>
CY 2010	15,191,707
CY 2011	17,608,560
CY 2012	14,174,477
CY 2013	16,884,101
4 year average	<u>15,964,711</u>
Base Period	15,226,268
Test Period	15,964,534

Notes:

(1) Above the line only, stated in 2013 dollars

812 **Q. Please describe the Legal Consulting Costs adjustment proposed by Mr.**  
813 **Thomson in regard to the Wood Hollow fire.**

814 A. Mr. Thomson's adjustment attempts to normalize and amortize over five years legal  
815 consulting service expense related to the Wood Hollow fire due to what he  
816 perceives to be an abnormal level of one-time occurring costs in the Base Period.

817 **Q. Does the Company agree with the Legal Consulting Costs adjustment**  
818 **proposed by Mr. Thomson?**

819 A. No. Mr. Thomson's proposed adjustment should likewise be rejected because the  
820 table above clearly shows that the legal costs as projected for the 12 months ended  
821 June 2015 are in line with the Company's four year average, in fact, they are almost  
822 identical amounts. If the legal costs related to the Wood Hollow fire were abnormal,  
823 keeping them as a Base Period expense would produce abnormally high projected  
824 legal costs, and that is clearly not the case here.

825 **Carbon Overhaul Expense**

826 **Q. Please explain Carbon Overhaul Expense adjustment as proposed by Ms.**  
827 **Ramas and Mr. Higgins respectively.**

828 A. In its original filing, the Company normalized generation overhaul expense using a  
829 four-year average methodology. The Carbon plant generation overhaul expense  
830 was scaled back by 25 percent, representing April to June 2015, in the four-year  
831 average totals due to the plant's scheduled April 2015 retirement. Ms. Ramas and  
832 Mr. Higgins propose to remove 100 percent of the Carbon plant generation overhaul  
833 expense from the Test Period calculation, resulting in a decrease of \$633,903 on a  
834 total Company basis and \$270,222 on a Utah basis before escalation. Mr. Higgins'  
835 adjustment also incorporates escalation of past generation expense.

836 **Q. Does the Company agree with the proposed Carbon Overhaul adjustments?**

837 A. No. To be consistent, averaging adjustments need to be made over the entire span  
838 of the four years. During the years in which the Company performs plant overhauls,  
839 the expense is reduced to an average, which may include years with no overhauls.  
840 Eliminating Carbon plant from the four year average used during the Test Period  
841 doesn't allow the expense to be increased consistent with the earlier decrease. For  
842 example, if an overhaul costs \$1,000, the Company would only recover \$250 during  
843 that year because only one-quarter of the cost is to be recovered each year. If a plant  
844 were retired before the end of the four years included in the average, the Company  
845 would not recover the full \$1,000 unless it was permitted to continue to include the  
846 plant's \$1,000 in the four-year average until the end of the four years. The Carbon  
847 Plant Overhaul adjustment does not afford the Company the opportunity to recover

848 the \$2,703,000 cost of the 2013 overhaul at Carbon as shown on page 4.8.2 of  
849 RMP\_\_\_(SRM-3), which has not been included in any prior cases. As in the  
850 example discussed above, the four-year average methodology results in only 25  
851 percent of the cost of the Carbon Overhaul being included in the Company's filed  
852 case. Removing the entire cost of the overhaul increases the under recovery of this  
853 expense.

854 **Q. Ms. Ramas argues that this adjustment is fair because the Company also**  
855 **includes projected overhauls for new generation plants like Lake Side 2. How**  
856 **does the Company respond to this argument?**

857 A. The Company did not begin an averaging methodology for generation overhauls  
858 until the 2008 general rate case, in Docket No. 07-035-93. Therefore, the Company  
859 would not have added a projected amount as is the case with Lake Side 2. Because  
860 of this error in methodology, the Company urges the Commission to reject Ms.  
861 Ramas' and Mr. Higgins' adjustments.

## 862 **Plant Additions**

863 **Q. Please describe the adjustment entitled "Late Additions to Capital Projects**  
864 **Database," proposed by Mr. Hahn.**

865 A. In DPU 35.4, Mr. Hahn requested that the Company provide capital projects that  
866 were not in the original July 2013 to June 2015 forecast that are now expected to  
867 be placed into service during the March 2014 to June 2015 time period, within the  
868 Test Period. The Company provided 10 specific projects that fit the criteria in its  
869 response, which are listed in Mr. Hahn's Exhibit DPU 3.5 Dir-Rev Req. These  
870 projects were included in the DPU Update adjustment proposed by Mr. Croft. Mr.

871 Hahn deemed the projects to be unsupported and proposes removing them from the  
872 case.

873 **Q. Does the Company accept this adjustment?**

874 A. No, with the exception of the Naughton U3 OH Boiler Waterwall Replacement and  
875 the Soda Spill Way Gate projects, which were removed from the case as described  
876 earlier in my testimony as adjustments 12.24 and 12.25.

877 **Q. Please list the capital projects discussed in this adjustment?**

878 A. The eight projects that were not included in the Company's original filing but were  
879 provided to the DPU through discovery and included in the DPU's plant additions  
880 update adjustment are listed below, along with the Company witness who provides  
881 support for the project in rebuttal testimony:

- 882 1. Wallowa Falls, *Mr. Mark Tallman*
- 883 2. Swift Side Nets, *Mr. Mark Tallman*
- 884 3. Swift Main Net, *Mr. Mark Tallman*
- 885 4. Yale Upper Rock Block, *Mr. Mark Tallman*
- 886 5. DJ U3 Primary Superheater Mid Span, *Mr. Dana Ralston*
- 887 6. Lakeside U12 Combustion Turbine Exhaust Cylinder, *Mr. Dana Ralston*
- 888 7. Huntington U1 FGD Inlet Duct Header, *Mr. Dana Ralston*
- 889 8. Vantage Pomona Heights, *Ms. Natalie Hocken*

890 **Chehalis CSA Variable Fee**

891 **Q. Please explain Mr. Croft's adjustment to the Chehalis CSA Variable Fee.**

892 A. Based on the Company's response to data request OCS 4.33, Mr. Croft proposes a  
893 reduction in costs for this project from the \$29,676,287 shown in the capital

894 database to the \$25,742,236 prepaid balance, referenced in the data request. This  
895 cost reduction results in a \$15,241 decrease in Utah's revenue requirement.

896 **Q. Does the Company agree with this adjustment?**

897 A. No. The referenced capital database value of \$29,676,287 includes the total amount  
898 of the capital project that is expected to go in-service at the time of the overhaul.  
899 The \$25,742,236 reflects only the prepaid balance, derived from the variable factor  
900 fired hour fees paid. When the capital project is placed in-service it will include  
901 items such as outage service fees, capital surcharge and AFUDC. Therefore, the  
902 recommended adjustment should be rejected.

903 **Employee Reductions**

904 **Q. Please describe the adjustment proposed by Ms. Ramas concerning employee**  
905 **reductions.**

906 A. Ms. Ramas proposes an adjustment based on her assertion that employee headcount  
907 in the Company's filing is not reflective of the likely Test Period level. Her  
908 adjustment reduces revenue requirement by approximately \$3,685,197.

909 **Q. Does the Company accept Ms. Ramas' adjustment?**

910 A. No. Mr. Wilson provides support for the level of employees included in the  
911 Company's original filing.

912 **Wage and Benefit Expense**

913 **Q. Does the Company agree with the adjustment proposed by Mr. Higgins**  
914 **reducing revenue requirement for the difference in the number of employees**  
915 **at January 2014 compared to June 2013?**

916 A. No. As addressed in the testimony of Mr. Wilson, the labor costs included in this

917 case are at an appropriate level and reflect the level necessary for the Company to  
918 provide safe and reliable service to our customers.

919 **Generation Overhaul Expense**

920 **Q. Please explain Ms. Ramas' adjustment to Generation Overhaul Expense.**

921 A. Ms. Ramas proposes to reduce revenue requirement on a total Company basis by  
922 \$1.5 million, and \$625,426 on a Utah-allocated basis. This proposed reduction  
923 removes the adjustment applied by the Company to restate the prior year overhaul  
924 expenses to a June 2013 level before calculating the four-year average level of  
925 overhaul costs.

926 **Q. Is the Company's position that generation overhaul expense must be restated  
927 to current dollars supported by any intervening parties in this case?**

928 A. Yes. In his direct testimony, Dr. Powell provides a detailed and astute argument  
929 supporting the Company's methodology on this issue in this case. On lines 115-116  
930 referring to the Company's generation overhaul expenses ("GOE") he says, "failure  
931 to account for inflation will systematically underestimate or understate the  
932 Company's test period GOE." Dr. Powell then goes on to introduce new evidence  
933 to support his claims using economic theory that lead to the conclusion stated on  
934 lines 155-159:

935 "Economic theory suggests that in order to compare two values separated  
936 by time, the values need to have a common monetary base. That is, the  
937 values should be expressed in real terms, where the effects of inflation are  
938 taken into account, as opposed to nominal terms. Comparing values  
939 expressed in nominal terms-ignoring inflation-can lead to erroneous  
940 conclusions."

941 **Q. Does the Company agree with Dr. Powell's conclusion as it relates to the  
942 generation overhaul adjustment?**

943 A. Yes. Before averaging historical amounts from different years, it is important that  
944 the dollars be correctly stated using constant dollars. Since dollars from different  
945 years have different purchasing power, failing to restate each of these dollar levels  
946 to a common basis is analogous to comparing apples to oranges to bananas. To  
947 ignore an adjustment accounting for the differing purchasing power of dollars in  
948 different years is to ignore inflation has occurred. Any financial analysis performed  
949 by the Company in evaluating investment alternatives by necessity and common  
950 sense must consider inflation. Ms. Ramas states that productivity offsets and  
951 lessons learned will offset any inflationary drivers. This simplistic assumption is a  
952 notion that would be difficult to support by actual data.

953 **Q. As pointed out by Ms. Ramas, the Commission has ruled against the use of**  
954 **escalation to constant dollars in prior cases. Why does the Company think the**  
955 **Commission should reconsider its position?**

956 A. Based on the arguments provided both in my testimony and that of DPU witness  
957 Dr. Powell in this case, the Company urges the Commission to reconsider its  
958 position on this issue.

959 **Q. Please explain Mr. Higgins' adjustment to Generation Overhaul Expense.**

960 A. Mr. Higgins proposes to reduce Company revenue requirement on a total Company  
961 basis by \$378,000, and \$161,000 on a Utah-allocated basis. This proposed decrease  
962 represents a reduction to the forecasted overhaul cost included for the Lake Side 2

963 plant. This reduction is derived from a ratio which Mr. Higgins calculates based on  
964 actual overhaul expenses versus projected overhaul expenses applied for in rates.  
965 Based on the Company's past general rate case filings, Mr. Higgins asserts that the  
966 Company had overestimated projected overhaul costs by 62.7 percent on average  
967 for the Carrant Creek and Lake Side 1 plants over the period 2007 through 2011.  
968 Thus, in the current case, he states that generation overhaul expense must be scaled  
969 back by this proportion to more accurately reflect the actual expense to be expected  
970 for this project.

971 **Q. Does the Company agree with Mr. Higgins' generation overhaul adjustment?**

972 A. No. Mr. Higgins argument is based on a generalization. In reality, the  
973 appropriateness of the amounts included in the rate case should be based on the  
974 reasonableness of the amount included. As supported in the rebuttal testimony of  
975 Mr. Ralston, the forecasted overhaul expense for Lake Side 2 is reasonable, and the  
976 Company urges the Commission to reject the Generation Overhaul adjustment as  
977 proposed by Mr. Higgins. As summarized in table 5 below, Mr. Higgins table KCH-  
978 3 shows actual average overhaul costs for the first four years of operations for the  
979 Carrant Creek and Lake Side 1 plants at \$1.7 million and \$1.2 million, respectively.  
980 By comparison, the Company is including only \$1.0 million for the four year  
981 average of Lake Side 2 in Exhibit RMP\_\_\_\_(SRM-3) page 4.8.2, less than either  
982 Carrant Creek or Lake Side 1. Therefore, his overhaul adjustment should be  
983 rejected.

#### **Table 5**

Plant	4 Year Average Overhaul Cost	Source
Currant Creek	\$1,685,095	Table KCH-3
Lake Side 1	\$1,237,744	Table KCH-3
Average	\$1,461,420	
Lake Side 2	\$1,031,295	Exhibit RMP____(SRM-3) Page 4.8.2

984 **Construction Work In-Progress (“CWIP”)**

985 **Q. What issue does Ms. Ramas raise with the inclusion of CWIP in the current**  
986 **case?**

987 A. Ms. Ramas proposes to remove the amounts associated with the Wallula McNary  
988 project and Generation Compliance Initiative Hardware. Ms. Ramas explains that  
989 the Wallula McNary project currently being charged to an expense account in order  
990 to establish a reserve in the event of a possible write-off, poses risks of double  
991 recovery if the Company determined a need and completed the project. Ms. Ramas  
992 also recommends removing the write-off of unused electronic equipment associated  
993 with the Generation Compliance Initiative Hardware security project, which was  
994 done to comply with NERC/Critical Infrastructure Protection Standards (“NERC  
995 CIPS”).

996 **Q. Please elaborate on the details of the Wallula McNary 230Kv line project in**  
997 **dispute.**

998 A. The Oregon Public Utilities Commission (“OPUC”) issued a Certificate of Public  
999 Convenience and Necessity (“CPCN”) in September 2011. In 2013, the project was  
1000 delayed based on customer needs. Based on this delay, the Company continues to  
1001 evaluate the need for the project. In anticipation of a possible write off, the

1002 Company has established a reserve account for \$1.7 million.  
1003 Ms. Ramas argues if the project is deemed necessary and placed into service the  
1004 Company will double-recover the cost. She recommends removing the amount  
1005 charged to expense to establish the reserve from the Test Period for this proceeding.  
1006 To avoid a double recovery, the Company would offset the cost as described below  
1007 if the project continues.

1008 **Q. What is the Company's proposed treatment of the write-off reserve for**  
1009 **Wallula McNary if the project is completed?**

1010 A. Currently, the Wallula McNary line includes a \$1.7 million CWIP reserve account  
1011 established for the possibility of a write-off. In the event the construction of the line  
1012 was completed, the reserve would be reversed and the project would move from  
1013 CWIP to plant-in-service. Since this reserve is proposed to be collected from  
1014 customers, a reserve balance would be credited to plant-in-service for the same  
1015 CWIP reserve amount upon completion. The overall result would fully offset the  
1016 CWIP reserve account to customers. The project is currently being monitored by  
1017 the Company to ensure the accuracy of future accounting methods if this situation  
1018 does arise.

1019 **Q. Please elaborate on the details of the Generation Compliance Initiative**  
1020 **Hardware in dispute.**

1021 A. In 2008, following an assessment of the extensive nature of the NERC CIPS  
1022 standards, the Company made the decision to hire an outside consultant to design a  
1023 fully integrated compliance program that would bring its critical asset generation  
1024 facilities and operations into compliance with the new NERC CIPS standards. The

1025 "Matrikon" solution that was chosen included a complete set of compliant policies,  
1026 procedures, and documentation, as well as a network design that allowed each  
1027 critical asset generation facility to automate many of its compliance obligations,  
1028 while simultaneously meeting the new cyber security requirements imposed by the  
1029 new NERC standards.

1030 In February of 2010, PacifiCorp Energy management and the PacifiCorp IT  
1031 department performed an internal reassessment of the Matrikon solution. The  
1032 assessment concluded that while the Matrikon solution provided a compliant  
1033 program, it also presented several undesirable drawbacks, among which were: (1)  
1034 requiring the Company to rely on a third-party vendor for its compliance program;  
1035 (2) requiring that the Company either add internal headcount or hire Matrikon on  
1036 an ongoing basis in order to sustain the compliance program; (3) essentially  
1037 requiring the creation of an IT department within the Generation organization; and  
1038 (4) reinforcing the stand-alone operation mode of the critical asset generation plants  
1039 rather than moving closer to a centralized, integrated solution.

1040 The IT department presented the Company with an alternative compliance  
1041 model that was instead primarily supported by internal resources. The alternative  
1042 compliance model offered the benefit of centralizing many of the compliance tasks  
1043 that, under the Matrikon solution, would have been performed independently by  
1044 plant personnel at each of the critical asset facilities.

1045 When this option was deemed more viable, the determination was made to  
1046 terminate the original Matrikon scope of work and to pursue implementation of the  
1047 alternative compliance model proposed by the IT department. The work is now

1048 being done by the in-house IT group with the changes in scope reflecting fewer  
1049 facilities requiring the full-scale implementation. Ms. Ramas proposes to remove  
1050 this project on the basis that the Company did not complete a robust analysis of the  
1051 project and the costs could have been avoided by using internal resources rather  
1052 than an outside vendor.

1053 **Q. Does the Company agree with Ms. Ramas' assessment?**

1054 A. No. The Company maintains that at the time the decisions were made to incur the  
1055 costs related to these projects, these solutions were thought to be the best available  
1056 to the Company to solve these specific issues. In coming to this conclusion, the  
1057 Company underwent its own process of due diligence into all of the available  
1058 solutions using the best, most complete information it could gather at the time.  
1059 However, additional information revealed during the implementation process of  
1060 these solutions, uncovered and unforeseen potential safety concerns and other  
1061 undesirable consequences of which the Company was not previously aware.  
1062 Subsequent reassessments of these projects given the new information indicated  
1063 that alternative solutions would be better suited to meet the Company's needs.  
1064 Though the Company could not perfectly foresee all of the consequences of these  
1065 projects prior to making the decision to begin their implementation, this is a basic  
1066 reality of operating any business. Any decision the Company makes can only be  
1067 based on the best information it can obtain at the time. These decisions are  
1068 constantly reassessed pursuant to new information that becomes available so that  
1069 the Company can serve its customers in the most efficient way possible. The  
1070 Company is opposed to the idea of prohibiting specific CWIP write-off expenses

1071 related to projects that were canceled.

1072 **Q. Does the Company accept Ms. Ramas' proposed adjustment to CWIP?**

1073 A. No. The Company has established accounting protocols and internal resources to  
1074 ensure that any projects with reserve accounts will be properly accounted for and  
1075 not double-recovered from customers. Additionally, the Generation Compliance  
1076 Initiative Hardware solution was thought to be the best available to the Company  
1077 to solve these specific issues at the time and are normal operating costs of doing  
1078 business. The investments made for such compliance purposes should not be  
1079 excluded from rates.

1080 **O&M Expense Escalation**

1081 **Q. Please explain the adjustment to the escalation of non-labor O&M costs**  
1082 **proposed by Mr. Higgins.**

1083 A. Mr. Higgins' proposed adjustment removes the increases to non-labor O&M  
1084 expense through the application of IHS Global Insight Inc. ("IHS") escalation  
1085 factors as projected for the Test Period. He cites two primary concerns: (1)  
1086 including a provision for escalation in rates makes inflation a "self-fulfilling  
1087 prophecy"; and (2) including escalation in the Company's rates builds a "cost  
1088 cushion" and provides a disincentive for the Company to improve efficiency. His  
1089 adjustment reduces the Company's revenue requirement by \$2.4 million.

1090 **Q. Has the Commission ruled favorably on the use of escalation rates?**

1091 A. Yes. In Docket No. 07-035-93 the Commission stated, "In this case, we find use of  
1092 Global Insight inflation forecasts is appropriate and provide the Company adequate  
1093 incentive to manage their non-labor O&M costs (other than net power costs)."

1094 **Q. Why does the Company oppose Mr. Higgins' adjustment?**

1095 A. Mr. Higgins' position that including a forecast of inflation in the Company's case  
1096 becomes a self-fulfilling prophecy is overreaching. The proposed adjustment is  
1097 based solely on his interpretation of high-level, macro-economic indicators and not  
1098 empirical evidence of the cost pressures facing the utility industry and the  
1099 Company. The Company is simply reflecting the cost of goods and services that it  
1100 projects to experience during the Test Period. If these cost increases are not  
1101 reflected in the Company's projected revenue requirement, it will impact the  
1102 Company's ability to recover the costs necessary to serve customers during the rate-  
1103 effective period.

1104 **Q. Does the Company agree that including escalation serves as a "cost cushion"**  
1105 **for the Company?**

1106 A. No. Planning for the costs the Company will incur in providing service to customers  
1107 during the Test Period is not a cost cushion, but rather an accepted practice in setting  
1108 rates that will allow the Company an opportunity to recover its prudently incurred  
1109 costs as needed to provide safe and reliable electrical service. Mr. Higgins purports  
1110 that the use of a test period through mid-2015 is "aggressively-forward", and that  
1111 "RMP should not be rewarded for the use of an aggressively-forward test period  
1112 with a windfall-markup of costs..." (Ref Line 285). In fact, the Test Period for the  
1113 current rate case was specifically selected to align closely with the rate-effective  
1114 period. This is the period when the Company is to provide services to customers,  
1115 and in doing so, this is also the period when the Company will be making the O&M  
1116 expenditures. It is evident, then, that O&M expenses should rightfully be matched

1117 to the real economic dollars of the rates paid by customers. To reject any adjustment  
1118 to O&M for inflationary pressures would mean that rates will continue to be set  
1119 based on expenses at 2013 levels, while the Company's actual expenses are  
1120 incurred at 2015 levels. This will result in chronic under-earning and does not  
1121 afford the Company a reasonable opportunity to earn its authorized return and  
1122 counters the objective of ameliorating regulatory lag.

1123 **Q. Does escalation of O&M expense create a disincentive to O&M efficiency**  
1124 **efforts?**

1125 A. No. In fact, the Company has managed costs and drastically improved O&M  
1126 efficiencies in spite of the inclusion of an O&M expense escalation adjustment in  
1127 past cases. The Company agreed to a stayout period in the last case, and has  
1128 managed costs to try and minimize customer rate impacts, and will continue to  
1129 manage costs, but inflationary pressures are inevitable and out of the Company's  
1130 control.

1131 **Q. Has Mr. Higgins proposed a similar adjustment in past general rate cases?**

1132 A. Yes. Mr. Higgins has proposed the complete removal of inflation from the  
1133 Company's cases since 2007. Had Mr. Higgins been successful in persuading the  
1134 Commission to remove escalation from the Company's case, today the Company's  
1135 expenses would be chronically lagging actual costs, preventing the Company from  
1136 recovering the costs of serving customers. Adequate planning for these costs is vital  
1137 to the Company's ability to provide electric service, and ignoring inflation in  
1138 planning, rate cases, retirements, or any other activity would be irresponsible.

1139 **Q. What additional arguments does Mr. Higgins provide to support his**

1140 **adjustment?**

1141 A. Mr. Higgins claims that inflationary pressures will not be substantial through the  
1142 Test Period. He lists two sources to support this claim: the Minutes of the Federal  
1143 Reserve Open Market Committee from March 18-19, 2014, and the February 2014  
1144 forecast of the Congressional Budget Office. Both of these sources contain high  
1145 level discussions of national economic factors, including core inflation, which is  
1146 anticipated to be in the range of 1.4 percent to 1.6 percent in 2014 and 1.7 percent  
1147 to 2.0 percent in 2015. Both of these indicate that inflation will exist, and should  
1148 not be ignored.

1149 **Q. Why does the Company believe that the IHS Global Insight escalation factors**  
1150 **included in the case are more appropriate than Mr. Higgins' core inflation**  
1151 **argument?**

1152 A. IHS conducts thorough research that is highly specialized to the electric utility  
1153 industry. Based on its research, IHS formulates escalation factors related to specific  
1154 FERC accounts. In contrast, core inflation is a broad predictor of inflation that is  
1155 measured based on aggregate price growth excluding food and energy prices. While  
1156 core inflation can be a valuable tool when examining the economy as a whole, it is  
1157 too broad to be an accurate predictor of the specific cost pressures the Company  
1158 will experience during the Test Period.

1159 **Incremental Generation O&M**

1160 **Q. Please explain Ms. Ramas' adjustment to Incremental O&M costs.**

1161 A. Ms. Ramas proposes to reduce the Company's Incremental O&M adjustment by  
1162 \$14.3 million on a total Company basis or \$6.1 million on a Utah-allocated basis.  
1163 She recommends increasing the O&M expense for the Test Period to escalated  
1164 amounts (escalation factors are provided by IHS) only, rather than the Company's  
1165 forecasted Test Period amounts. On line 937 of her testimony she does, however,  
1166 make an exception for the Carbon, Lake Side 1, Lake Side 2, and Naughton plants  
1167 which she accepts on the basis they are "unique and significant circumstances."

1168 **Q. Are there any additional adjustments Ms. Ramas has proposed to Incremental**  
1169 **O&M costs?**

1170 A. Yes. As requested in OCS 19.4, a billing delay true-up for Cholla occurred during  
1171 the months of May and June of 2013 for \$1,656,330. Ms. Ramas proposes to adjust  
1172 Cholla actuals for this billing delay which caused Cholla to be understated by \$1.6  
1173 million.

1174 **Q. Does the Company agree with the adjustment as proposed by Ms. Ramas?**

1175 A. No, the Company does not agree given the upward trend in costs necessary to  
1176 operate and maintain the Company's thermal generation resources. These increases  
1177 include environmental cost increases, non-reagent chemical increases, and  
1178 additional maintenance increases. Additional pertinent details are provided in the  
1179 rebuttal testimony of Company witness Mr. Ralston.

1180 In regards to the billing true-up proposed by Ms. Ramas, the Company also  
1181 rejects this adjustment on the premise that the mathematical result is a net zero. Ms.  
1182 Ramas proposes to reduce the incremental O&M adjustment for the Cholla billing  
1183 delay by \$1,656,330. However, Ms. Ramas does not provide a separate adjustment

1184 which would be required to increase the base by the equivalent amount. To  
1185 accurately address the billing delay, two adjustments would be required: an  
1186 adjustment to increase the base period by the billing delay amount to correctly state  
1187 the base and test period costs, then an adjustment to decrease incremental O&M  
1188 adjustment. The overall result of the two adjustments would completely offset one  
1189 another. If a decision were made to adopt the methodology of Ms. Ramas, the  
1190 Company would also need to provide an offsetting adjustment to the base period.  
1191 Ms. Ramas is attempting to adjust from a corrected base amount, without actually  
1192 correcting the base amount.

1193 **Bonuses and Awards**

1194 **Q. Please explain Mr. Meyer's adjustment to bonuses and awards.**

1195 A. Mr. Meyer asserts that bonuses and awards given to employees were administered  
1196 with no set criteria or plan documentation. He proposes to completely remove these  
1197 amounts from the filing.

1198 **Q. Does the Company agree with this adjustment prohibiting all bonuses and**  
1199 **awards excluding AIP amounts?**

1200 A. No. As fully supported in the rebuttal testimony of Company witness Mr. Wilson,  
1201 these bonuses and awards serve to attract, retain, and justly recognize employees of  
1202 the Company who meet and exceed personal and Company-wide goals.

1203 **Residential Revenue and Load Adjustment**

1204 **Q. Please explain Mr. Meyer's adjustment to Residential Revenue and Load.**

1205 A. Mr. Meyer believes the Company has overstated the reduction in forecasted loads  
1206 for residential revenues. Mr. Meyer attempts to make an adjustment related to loads,  
1207 but appears to lack the understanding that any change in load changes three revenue  
1208 requirement components: 1) revenues; 2) net power costs; and 3) allocation factors.

1209 **Q. Are there any computational or methodological errors in Mr. Meyer's**  
1210 **adjustment?**

1211 A. Yes. Mr. Meyer's testimony has four areas where over-simplification has caused  
1212 errors. The first is in the load adjustment itself, which is addressed in the testimony  
1213 of Company witness Ms. Kelcey A. Brown. His second error is in the calculation  
1214 of revenues, where an average rate was used without looking at the impact on  
1215 specific rate schedules and rate tiers. The third error is in the simplifying  
1216 assumptions regarding net power costs. Mr. Meyer adjusts net power costs  
1217 assuming 39 percent of revenues, as opposed to looking at the impact that the load  
1218 would have on incremental power costs. The last error is that Mr. Meyer fails  
1219 entirely to account for how a change in load will impact allocation factors. Any  
1220 change in load will change the energy and peak loads used to allocate costs to Utah,  
1221 including the SG, System Energy ("SE"), and SO allocation factors. A change in  
1222 these factors would have a cascading effect on multiple issues, particularly the  
1223 allocation of O&M, A&G, capital, generation and transmission rate base, and  
1224 deferred taxes, all of which would shift costs to Utah. Because of these errors and  
1225 simplifications this adjustment should be rejected.

1226 **Naughton and Medicare Tax Amortization**

1227 **Q. Does the Company agree with the adjustment proposed by Mr. Meyer**

1228 **prohibiting amortization of the Naughton U3 Emission Cost Regulatory Asset**  
1229 **and the amortization of the regulatory asset associated with the tax impact of**  
1230 **healthcare reform changes to the deductibility of Medicare retiree drug**  
1231 **subsidies?**

1232 A. No. This adjustment has already been accounted for in the Company's filed case.  
1233 Mr. Meyer's adjustment constitutes a double count. Concerning the Naughton  
1234 regulatory asset, in my direct testimony filed for this case, lines 267-276 stated:

1235 "Paragraphs 52 and 53 of the 2012 GRC Stipulation specifies  
1236 treatment of the Naughton Unit 3 development costs for which the  
1237 Company requested deferred accounting treatment in Docket No.  
1238 12-035-80. Pursuant to the stipulation, Utah's allocated share of the  
1239 Naughton Unit 3 development costs of \$7.9 million would be  
1240 deferred and fully amortized by September 1, 2014, providing full  
1241 recovery prior to the effective date of this rate case. As addressed  
1242 later in my testimony, the Naughton Write-off Adjustment, (No.  
1243 4.10 of Exhibit RMP\_\_\_(SRM-3)) removes amortization of the  
1244 Naughton Unit 3 development costs from Test Period results  
1245 ensuring the amortization is not reflected in the requested revenue  
1246 requirement."

1247 Since adjustment 4.10 in Exhibit RMP\_\_\_(SRM-3) already completely removes  
1248 this cost, Mr. Meyer's proposed adjustment to remove it a second time would be  
1249 double counting and therefore should be rejected.

1250 **Q. Why would adjusting the Medicare Tax regulatory asset constitute a double**  
1251 **count?**

1252 A. Again referring to my direct testimony, lines 739 - 743 state:

1253 "Pro Forma Schedule M's (page 7.6) - The Base Period Schedule M  
1254 items were updated for known and measurable adjustments through  
1255 the Test Period. Nonutility items, separate tariff items, and other  
1256 non-recurring items were removed from the historical period before  
1257 updating. The Schedule M items were then used to develop deferred  
1258 income tax expenses and balances for the Test Period."

1259 The non-recurring Medicare Tax regulatory asset was removed from the filing in  
1260 adjustments 7.6 and 7.7. Again, Mr. Meyer is proposing to remove a cost that does  
1261 not exist in the case.

1262 **Fixed Costs Associated with Lower Energy Sales**

1263 **Q. Please summarize Mr. Lesser’s testimony regarding fixed costs associated with**  
1264 **lower energy sales.**

1265 A. Mr. Lesser contends that the Company should not be afforded the guarantee to  
1266 recover their fixed costs due to lower energy sales, and the risk should be borne by  
1267 the shareholders should the Company be unable to recover fixed costs through  
1268 wholesale market sales.

1269 **Q. What are the fallacies in Mr. Lesser’s argument?**

1270 A. The Company is not seeking a guarantee for fixed cost recovery. The 2010 Protocol  
1271 dictates the methodology by which costs are allocated among the states, and has  
1272 been applied correctly in this proceeding. Mr. Lesser's argument has no merit, and  
1273 has no specific recommendation or remedy. The Company will respond to the rate  
1274 design part of Mr. Lesser's testimony in the cost of service phase of this case.

1275 **Retail Transmission at FERC OATT**

1276 **Q. Please explain Mr. Lesser’s proposed adjustment with regards to the**  
1277 **transmission costs paid by retail customers.**

1278 A. Mr. Lesser states that the Company should charge all customers the same  
1279 transmission costs. He argues that retail customers should incur the same FERC  
1280 Open Access Transmission Tariff (“OATT”) rate that wholesale customers are  
1281 charged. He also believes that other costs that the Company includes in its retail

1282 transmission rates, such as purchases of transmission services from other  
1283 companies, should be functionalized as generation-related costs, thus making all  
1284 customers equal, paying the same FERC OATT rate.

1285 **Q. Does the Company agree with Mr. Lesser’s proposed adjustment to**  
1286 **transmission rates charged to retail customers?**

1287 A. No. This is an issue that is addressed by the allocation methodology utilized by the  
1288 Company. The 2010 Protocol allocation methodology has been agreed upon by all  
1289 parties to be used through December 31, 2016. This is not an issue that Mr. Lesser  
1290 should be arguing in this general rate case, and the adjustment should not have been  
1291 recommended. The issue has been previously discussed in Multi-State Process  
1292 (“MSP”) negotiations, and an agreement was made by all parties to utilize this  
1293 methodology until the end of 2016, or until a new allocation methodology has been  
1294 established in new MSP proceedings.

1295 **Cost Allocation Formula**

1296 **Q. Please explain the issue addressed in the testimony of Mr. Lesser with the “75-**  
1297 **25” cost allocation methodology.**

1298 A. Mr. Lesser attempts to explain how this methodology exacerbates the Company’s  
1299 fixed costs. The “75-25” methodology allocates fixed generation and transmission  
1300 costs, in part, based on energy consumption. In the opinion of Mr. Lesser, this  
1301 methodology has the effect of magnifying the Company’s fixed cost recovery  
1302 shortfall. Mr. Lesser believes that the “75-25” cost allocation formula leads to  
1303 inefficient cost allocation, resulting in ambiguous price signals for the Company’s  
1304 retail customers. He proposes abandoning this methodology, but does not provide

1305 an alternative solution or argument.

1306 **Q. Does the Company agree with the adjustment?**

1307 A. No. In referring to the "75-25" cost allocation formula, Mr. Lesser does not state  
1308 whether he is proposing a change to inter-jurisdictional allocations or to the cost of  
1309 service allocations within the state of Utah. If this is related to allocations to  
1310 customer classes within the state of Utah, the revenue requirement phase of a  
1311 general rate case is not the appropriate forum for proposing this type of change.  
1312 Intra-class allocations should be addressed in the cost of service phase of this case.  
1313 If Mr. Lesser is proposing a change to the 75/25 cost allocation formula for inter-  
1314 jurisdictional cost allocations the proper forum is the MSP. Either way, this is not  
1315 an issue that Mr. Lesser should be arguing in this phase of the general rate case.

1316 **Naughton Unit 3 Gas Conversion**

1317 **Q. Does the rate case reflect the Naughton 3 Gas Conversion?**

1318 A. Yes. The revenue requirement for this case continues to be prepared under the  
1319 assumption that Naughton Unit 3 will cease operations as a base load coal-fired  
1320 generating unit in December 2014 and be converted to a gas-fired peaking unit by  
1321 May 2015.

1322 **Q. Has the Company requested to delay the Naughton 3 Gas Conversion?**

1323 A. Yes. As addressed in the direct and rebuttal testimony of Company witness Mr.  
1324 Chad Teply, the Company has requested that, as part of the Environmental  
1325 Protection Agency ("EPA") review of the Wyoming Regional Haze State  
1326 Implementation Plan, the EPA consider extending the operation timeframe of the  
1327 unit as a coal-fired resource from December 31, 2014 to December 31, 2017.

1328                   If the EPA grants the Company's request to extend the operation timeframe  
1329 of Naughton Unit 3, the Test Period results will be materially impacted. In the event  
1330 the EPA extends the operation timeframe beyond June 30, 2015, the Company will  
1331 need to revise net power costs, electric plant in service and accumulated  
1332 depreciation balances, fuel stock balances, generation O&M expense and related  
1333 tax impacts. The Company estimates that continuation of Naughton Unit 3 through  
1334 the Test Period as a coal-fired facility will reduce the Utah revenue requirement  
1335 requested in this case by approximately \$5 million to \$6 million.

1336 **Q.    What is the Company's proposal if the EPA approves a delay in the Naughton**  
1337 **3 Gas Conversion?**

1338 A.    In my original testimony the Company anticipated a decision prior to rebuttal.  
1339 However, as described in the testimony of Company witness Mr. Teply, the  
1340 Company has not received approval to continue the operation of Naughton unit 3  
1341 as a coal fired unit. If approval is granted, the Company would propose including  
1342 the benefits of the continued operation as a coal unit as part of the Company's  
1343 Energy Balancing Account ("EBA") at 100 percent.

1344 **Q.    Why would it be appropriate to include this as part of the EBA?**

1345 A.    One of the major changes related to continued operations as a coal-fired unit will  
1346 be on net power costs, which are included in the EBA but subject to the 70 percent  
1347 EBA sharing provisions. Therefore, it would make sense to include all of the  
1348 changes related to the continued operation as a coal unit in the EBA, but to pass  
1349 through 100 percent of the effects of the changes so that customers receive the full  
1350 benefit of the savings. The Company would include the changes related to net

1351 power costs, electric plant in service and accumulated depreciation balances, fuel  
1352 stock balances, generation O&M expense and related tax impacts associated with  
1353 continued operations in the EBA.

1354 **Q. Does this conclude your rebuttal testimony?**

1355 A. Yes.
