To whom it may concern,

I am writing to express my deep concern about Rocky Mountain Powers proposed increases which are targeting solar power customers.

I purchased my home and made significant investments in order to have an energy efficient home which runs on solar and geo-thermal power sources. I did this as I have a high level of concerns for the impact that we are having on the environment and believe that as citizens we should do what we can to address the environmental challenges we face.

RMP are concerned that their profits are not high enough and want to squeeze more money out of people who have taken steps to move away from using fossil fuels. I invested \$12k in solar power so why is it OK for RMP to want to increase my rates by 60%. If this is allowed to happen it will discourage people to purchase solar homes as well as disillusion people who take genuine steps to be better citizens and protect the environment.

I implore you to step in and use your authority to stop RMP profiteering and stand up for regular citizens who are standing little chance without your help fighting these large corporations.

Kind Regards  
Liz Lanka
