Please be aware that RMP is attempting to maintain a pure financial monopoly upon any and all power generation within its service area. THIS SHOULD BE STOPPED AT ALL COSTS. It also defeats the basic incentive to reduce or minimize carbon generation. This action deters incentives for any future developments of user on site solar power.

The best and most green power generation is solar at the site of use as there are not any transmission losses and there are no negative impacts of energy redirected at site for local use.

An equally stupid analogy would be that RMP should be entitled to a fee for electricity generated within a hybrid or electric car's engine while driving. Because they should be the only supplier of electricity while within its service area and only they can generate power that should be used in automobiles. After all, every car should always get its power plugged in from RMP.

DO NOT ALLOW THIS STUPIDITY TO PROCEED!!!
