I write to express my strong support for Utah rooftop solar customers, and my opposition to Rocky Mountain Power's proposed fee increase of \$4.25 per month targeting these customers. Utah's solar owners are making critical investments in clean energy at a time when Rocky Mountain Power is not. The last paragraph is about my parents dedication to rooftop solar arrays. They live outside of Utah but Rocky Mountain Power's energy mix comes from several states, not just Utah.

Because Rocky Mountain Power's energy mix predominately relies on burning coal, it is a huge source of air pollution. In fact, among all Western utilities, Rocky Mountain Power is the single largest source of air pollution.

When rooftop solar customers plug their solar panels into Rocky Mountain Power's grid, they offset some of that dirty energy with pollution-free solar power.

And although these solar customers used their own money to buy solar equipment, the benefits accrue to many Utahns -- in the form of reduced air pollution, protection against fossil fuel price swings, and the creation of clean energy jobs right here in Utah.

Each individual rooftop solar installation is relatively small, but together their contribution is growing -- projected to comprise 20 MW by the end of 2014.

Solar customers are doing exactly what I wish Rocky Mountain Power would do: invest in Utah's renewable energy resources! I am very concerned that a solar penalty will stop some customers from "going solar" and impede progress toward renewables across the grid.

I stand with the rooftop solar energy producers of Utah and ask that the \$4.25 solar penalty not be approved. Their personal investment in clean energy creates clear benefits to Utah's health, environment, and economy. They should not be penalized; rather, they should be commended.

On a personal level, my parents own a house in another state and have not just 1 but 2 solar arrays on their roof and love the knowledge that they are harvesting the sun not just for the energy needs of their home but are contributing to the energy needs of their community. I know my folks would freak at the thought of paying a fee to "do solar" especially as the excess (if any) goes towards the energy bank for those on low fixed incomes.

Sincerely,
Laura Dukelow
