Hello-

I am a resident of South Jordan and I currently have a Net Metering Contract with RMP. I oppose any changes to the net metering plans as they are currently laid out, especially a monthly additional fee for solar users only.

Home solar panels help level out RMPs grid network by providing baseline power from a free source. Home owners like myself have taken the steps (with encouragement from federal and state tax credits) to install home solar. RMP has had plenty of forewarning that non-carbon rich fuels and home efficiency would impact their future power demands. Charging those of us who have worked to make the air cleaner and to protect ourselves from future energy cost spikes should not bear the burden of RMPs changing bottom lines.

It's also not in the interest of the PSCs shareholders - the public - to increase rates on home solar users. Bad air plagues the Salt Lake Valley, and many users such as myself have installed home solar to combat the use of polluting and carbon rich energy sources which increase this pollution.

Thank you for your time-
