To: psc@utah.gov

I am opposed to Rocky Mountain powers proposed monthly surcharge on all solar customers.

It is unbelievable that those of us who care about the environment the heavy use of coal by Rocky Mountain are going to be penalized for it.

The federal and state government reward solar customers with tax credits yet the power company is greedy and wants to penalize and prevent the public from utilizing it.

Rocky Mountain want us to pay more for using less. It's ridiculous that because I choose to use the sun (free energy) to gain a large portion of my electricity that I should pay more.

Winters are bad enough with the inversion and we are encouraged to car pool and make less car pool will start to be taxed on those efforts as well because we are taking away revenue from the oil companies.

Please stand and oppose this issue and support a cleaner Utah and those who choose solar energy.

Thank you for your time.
