Pursuant to a surcharge for Solar and wind power utility fees this is just another attempt to unfairly get more tax money, they have encouraged all of us

To buy into the conservation of electrical power by using solar and wind, as a large factory owner I will now drop all plans for adding 60 solar panels to the roof

of the factory. As with everything this will just be the beginning and the rate will climb every few years, I we will not be on the band wagon. It's just this sort of thinking that stymie's business development it provides no incentives for the businessman or to the consumer. Do these people stay up nights thinking of ways

To get more tax money. The power to tax is the power to destroy, can man invent anything without someone wanting to get a profit for others investments and labor.
