Dear Commissioners Allen, Clark and LeVar,

Please do not penalize homeowners and businesses who are installing solar panels and participating in the net metering program. Installing solar panels is an excellent way to collect clean energy, use it, and contribute some back to the community electricity grid. Utah has a very serious air quality problem and solar energy is part of a solution. Solar panels allow homeowners to save money by generating a significant portion of their own safe, clean, efficient energy. The homeowner or business makes a significant investment to install a solar system and the community benefits. The Solar industry is creating jobs in our community.

Do not stifle this opportunity to use individual actions to begin to change our energy sources and our economy. We all know that we must move to cleaner, renewable sources of energy and this is a first step. Be part of this solution, don't try to stomp it out.

Thank you,

Nancy Lombardo
