Hi,

As a net metering user, I would like to voice my concern for Rocky Mountain Power's filing for a rate increase to Net Metering users. We are already paying \$5.00 for a 'Basic Charge' and \$2.00 for a 'Minimum Charge' so they are getting monies for connection anyway. Furthermore, I'm sure the power that I used prior to solar panel installation is now being sold at higher rates to large companies. In fact, during my installation I asked RMP the question "why is RMP offering incentives for solar installation. Are you getting money from the Feds or elsewhere and how is RMP going to make money off this incentive deal". The answer was: No, we are getting no Fed money but we hope to sell the power you generate to customers who pay higher rates for electricity! In conclusion, I don't see the need for the increase in base rate to net metering users, in fact I would like to see RMP pay users for any credit left over at the end of the year (March).

Thank you,

Roger Simonson
