I'm sending this concerning the study of the pros and cons of solar energy. I understand the power company would like to help shape the study to their benefit. I am just in the process of purchasing a solar system for our house. I find it unconscionable that there would be an additional charge from the power company. I know they already charge me a portion of my power bill for their infrastructure. I am trying to be a good environmental citizen for the future citizens of our state and country. The detriment, and limit of fossil fuels is well documented. Please make sure the study takes all of the costs that fossil fuels bring.

Regards,  
Craig Dunford
