Dear Commissioners

As families in Utah, we have suffered bad air enough. Please address the: Economic and environmental costs of burning carbon. Solar is part of the solution that you and all of us need to support and foster in every way. Please include all solar customers equally in the study, not just residential customers. Non-residential and commercial solar customers contribute too.

Please use only independent researchers to gather and analyze data. RMP and PacifiCorp are vested interest holders and are not impartial. Their surveys are to establish their side only. We need accurate, sound and publicly inclusive and transparent studies to establish true consequences for making this timely decision.

Your kind attention to this crucial issue is vital to the well being of all who breathe air in this airshed.

Thanks

Sue Click
