To: psc@utah.gov

Honorable Commissioners,

We would like to participate in the research concerning the costs and benefits of net meter generated electricity. Please have Rocky Mountain Power (RMP) contact me to arrange having them install the second meter. It is my understanding they are offering a \$100 incentive and don't recall being contacted yet. I would also like to be able to monitor the data collected at our property (account 14393296-001 4).

The following are requests that I would like to make concerning the cost-benefit research:

1. Include all net meter producers (commercial and residential) connected to Rocky Mountain Power.
2. Include the value of benefits to RMP that solar contributes to the electrical system (i.e. less carbon fuel burned, less need for more power plants, fewer transmission costs and less energy lost on transmission lines, reduced EPA compliance costs, and less vulnerability to fossil fuel price fluctuations.
3. Acknowledge and include solar's value to the State and its citizens in offsetting the costs (health care, economic, and environmental) of burning fossil fuels to produce electricity.
4. Schedule technical conferences to insure these additional cost-benefit research items are fully address, as soon as possible.
5. Engage (Public Service Commission) a reputable, experienced third party to objectively monitor all aspects of the solar cost-benefit investigation to insure its results will be considered unbiased. This entity would be in addition to the Division of Public Utilities and the Office of Consumer Services.

I sincerely thank you for your service to the State and its citizens,

Don Gren
