To: psc@utah.gov

Dear Commissioners,

I am a home owner who recently installed solar power at significant personal cost because I feel it is my duty to do everything in my power to reduce our country's dependence of fossil fuels. Therefore I am very interested in the ongoing attempts of Rocky Mountain Power (RMP) to attach a surcharge specifically to residential solar power customers. I resent Rocky Mountain Power's biased approach to evaluating the cost-benefit of roof-top solar power. I respectfully request that the PCS reject RMP's request to limit analysis to load impacts. I submit that the public deserves, and the legislature requires, that the cost-benefit analysis consider all of the issues. It is up to you, the commissioners, to make sure that this cost-benefit analysis is fair, comprehensive, useful, and fulfills legislative requirements. I appreciate the work you do on our behalf, especially the tremendous effort this particular issue requires.

Sincerely,

Jill Allen, PharmD, BCPS
