In 2008 the legislature said it would be nice to have 20% instate renewable energy by 2025. It is time to **require** it. As efforts to study this idea come together, please make it a **comprehensive** effort. It would be nice to investigate all the pros and cons as fully as possible all at once, now, rather than decide on a few aspects this year and then a few more next and so forth. Social, economic, health, cultural, . . . all aspects should go into the considerations.

Thank you,

Andy White

Maple Samaras (Late summer 2010) They were all over my yard, but unnoticed. How many other things are there waiting for me to see.
