To: jordanwhite@utah.gov

Dear Commissioner White,

Solar is the future. I'm opposed to levying charges on solar customers. This makes no sense for us consumers and sounds like a windfall for RMP.

Solar consumers are reducing the load on our electrical grid.

Please Maintain the net metering policy.

Thank you,

Sherrie troseth

Sincerely,

Sherrie troseth

Utah Public Service Commission

Dear Service Commission,

Thank you for initiating the NEM cost-benefit analysis. As a citizen of the state of Utah, I urge the Commission to conduct a full and fair analysis that will explore the many economic, societal, and environmental benefits of rooftop solar.

Rooftop solar is critical to cleaning our air and eliminating our reliance on dirty energy like coal. Utah is blessed with abundant sunshine, but unfortunately we have fallen behind the majority of our Western neighbors in renewable energy development. The Commission should consider all of the excellent benefits that rooftop solar has to offer the community, including savings on infrastructure updates and lost energy through transmission.

The commission should do everything in its power to encourage more roof-top solar development, to increase consumer choice and diversify Utah's energy mix, which it heavily invested in risky coal. Please adopt an analysis framework that will protect Utah families' health and economic well-being for generations to come.

Sincerely,

Chris Scott

## Solar power credits

Utah Public Service Commission

September 15, 2015

In May of 2015 I installed a solar power system on my shop/storage building here in Moab.

The system is a 30 panel, 9300 watt system, and was qualified for the Rocky Mountain Power assistance, (which I am still waiting for). I am generating from 1300 kwh to 1600+ kwh per month, and using from 40 to 160 kwh per month, which leaves with a huge credit of kwh every month. As of September billing, I have 4040 kwh credit,(4 months) which I now find expires with the March of 2016 billing. In talking with Rocky Mountain power, they tell me if I don't use the accumulated credits, I just loose them all, and start over. They actually suggested that I "use more power", or buy more equipment that uses lots of electricity.

I don't know if this policy, of loosing all credits, is an internal one with Rocky Mountain Power, and/or if it is approved by the commission?

The reason I invested in the solar system, was to save me money of course, but also I thought it was the socially responsible thing to do. Now, it seems like it's almost a negative. I am ok with contributing more power to the grid than I use, but this seems excessive.

Instead of just complaining, I wonder if any of the following is possible;

1. Being able to transfer the credits to one of my other accounts; my office in downtown Moab, or my home in Moab. I talked to them about that, but they said NO.... I just can't do it. I don't understand why, that seems like a logical thing to me, and in the public interest. I am the one generating the electricity, why can't I use it. Again, is that their internal policy or one approved by the commission.
2. Having Rocky Mountain Power buy back the credits I have accumulated. That seems fair to me, and an incentive for me to use as little electricity off the grid, and to generate as much as possible.
3. Carrying over ones credits for a year after earning them, and not having them expire all on one date. I don't understand the March expiration of all?

Respectfully Submitted
