RockY Mountain Power & Solar Power

1 message

Patterson.Russell <patterson.russell@comcast.net>

Mon, Nov 14, 2016 at 6:25 PM

To: psc@utah.gov

Public Service Commission

Dear Sirs/Ms

Rocky Mountain Power thinks solar power users are being subsidized by not paying more for being hooked up to their power grid.

I think it's coal generated power that's being subsidized. Canada is imposing a \$50/ton fee on carbon emissions. This works out to be a *\$.03/kwh fee on power generated by coal. I think the Public Service Commission should impose a \$.03/kwh fee on power generated by coal so coal power users are helping to pay the environmental cost of carbon emissions.

Thank you

Russell Patterson

2955 S. 3145 W.

West Valley City, UT 84119

[801-973-6427](tel:801-973-6427)

*Before I had solar power cells installed on my house, I was enrolled in Rocky Mountains Power Blue Sky program. I received a letter from Rocky Mountain Power saying "your support of 7200 kilowatt-hours of renewable energy over the past year has had the equivalent environmental benefit of avoiding 8766 pounds of CO2."

8766 lbs=4.4 tons (\$50/ton fee)(4.4 tons/7200 kWh)= \$.03/kwh fee

Dear PSC,

I am commenting on the proposed changes requested by Rocky Mountain Power to Solar Power reimbursement for residential customers.

I served in the past on Governor Bangeter's Environmental Health Committee, and was Chairman of the Utah Medical Society Environmental Health Committee. I am a licensed Radioactive material user in the state of Utah. I serve on the Big Cottonwood Canyon Community Council, and am on the Board of Directors of the Forest Glen HOA in Big Cottonwood Canyon. I served in the National Health Service Corp for two years in Emery County Utah and practiced Cardiology in Salt Lake County for 30 years at LDS Hospital, IMC and at the University of Utah.

I oppose the proposed change in reimbursement for solar residential requested by Rocky Mountain Power. The proposed change will create a barrier to new solar electricity residential customers and directly lead to increased air pollution in the Salt Lake Valley as well as an increase in global temperatures. With fewer Solar units, more electricity will need need to be produced by coal or natural gas. With less Solar there will be more stress on the electric grid as more power flows to homes. Power flowing through lines and transformers causes wear and tear on the grid. Residential solar power, if widespread, would reduce stress on the grid and improve longevity of existing infrastructure.

The argument that solar customers do not pay a fair share of grid expense is wrong. By reducing wear and tear on the grid, solar customers support other users with large power needs that cause power line heating and line wear. The PSC should consider environmental issues, as those issues effect economic growth in Utah. The message this rate change would send to companies looking to move to Utah is clear: Utah doesn't consider environmental issues, air pollution and it's consequent health issues.

I would encourage the PSC not to approve the change in solar reimbursement, but instead, to recommend to Rocky Mountain Power a rate structure which would increase the number of residential solar units.

Thank you for considering my comments.

Solar Energy Price Restructuring Feedback

1 message

Aric Parkinson <aric.parkinson@gmail.com>

Mon, Nov 14, 2016 at 7:24 PM

To: psc@utah.gov

To whom it may concern,

I'm a concerned citizen regarding the proposal by Rocky Mountain Power to restructure their pricing for net-metering solar power customers. I'd like to strongly urge the UPSC to consider alternate adjustments.

My understanding is that Rocky Mountain Power has calculated that solar power net-metering customers are paying a disproportionately low amount towards their use of the standard electric grid due to volumetric differences in use at different times of day. As a consequence of this disparity in payment, costs of maintenance of the grid have been shifted to non-solar households. This effectively acts as a subsidy towards solar net-metering households.

I empathize with concerns expressed by some other community members who feel this unfairly distributes collective money into the hands of individual parties (and most likely only wealthier individuals at that). Typically, subsidies would cover communally shared resources, such as parks, so everyone paying into the system would be able to reap the rewards.

However, speaking from the perspective of a homeowner who is currently unable to invest in solar energy, I would prefer that I pay more if it means others in the market are economically motivated to shift to alternate energy sources. Our state, and beyond that the world, are facing a dire situation due to dependence on fossil fuels that have and continue to damage our environment.

While I believe that the free market could address these concerns, due to the low cost of oil and coal, there is limited economic viability in breaking into the market. And while businesses may be able to develop more cost effective solutions to renewable energy over the coming years, unless there is economic incentive to do so, individuals will be unlikely to transition to these alternate systems, and we need them to do it now more than ever.

While the electric grid is a communal resource that all participants should pay to maintain, our environment is also a shared resource that is protected by the willingness of Utah citizens to install and maintain solar energy technology for their homes. These efforts should be subsidized, even if it does mean putting a burden on others in society.

Finally, my understanding is that the current question on the table is whether Rocky Mountain Power ought to even be permitted to present their case for full discussion. I would like to emphasize that they absolutely should be able to discuss their case – transparency with their costs and figures for all participants in the electric grid, net-metering and non-net-metering alike, will be absolutely necessary to make an educated decision. However, please remember that this is not only an economic decision, but an environmental one as well.

Rocky mountain power solar fees

1 message

Stan Funk <stanfunk8@gmail.com>

Mon, Nov 14, 2016 at 7:48 PM

To: psc@utah.gov

Dear Commissioners,

I'm writing you today as an employee of the solar industry and a proud resident of the state of Utah. Last week I read Rocky Mountain Power's proposed fees for solar customers. I found their proposal to be deeply concerning. They seem to have masked this proposal as a way to protect non-solar customers, but this seems to clearly be an attack on the solar industry. They have found, through their research, that in order for this to be fair the fees they would need to impose would push solar customers' ROI out to 20-25 years. This is "coincidentally" the life span of solar panels. Clearly this would cripple the solar industry and whether or not the solar industry is of concern to the commission, the reality is thousands of jobs rest on your shoulders. I fully believe the commission is educated enough to make the right decision. It does however scare me to think that if this passes thousands of jobs will be lost and Utah will no longer be seen as a leading force for innovation in the power industry; instead Utah will be known for protecting the interests of big business and keeping our state in a dark age of the power industry.

I am not under the impression that our relationship with the power companies does not need to evolve as the solar industry progresses, but this proposal stops the solar industry dead in its tracks. A one-sided study that protects Rocky Mountain Power's interests seems to be an odd source for making an unbiased decision. The solar industry needs to come together with Rocky Mountain Power and figure out what is sustainable, but also in the best interest of Utah in this incredibly innovative time for the power industry.

Solar Panel net metering

1 message

Stephanie Felts <stephfelts78@me.com>

Mon, Nov 14, 2016 at 8:37 PM

To: psc@utah.gov

I am resident of Utah and solar panel customer and I am distressed to hear that you are considering doing away with net metering. This would be a financial hardship on our household. We tried to do our part to help make the air a little less dirty as I believe this is something we all have to do and our state lawmakers don't seem to want to. Now instead of helping our air, you are trying to make it worse and kill solar . Please don't do this!

To: psc@utah.gov

Hi,

I was recently notified that Rocky Mountain power is trying to change their net metering program so that us residents are penalized for going solar. This is contradictory to the incentives we are getting from both the state and federal government for renewable energy arrays. Also, the way they presented their claim was unfair and dishonest. They claim that they are buying our power at the same rate it costs them to make it at this lower rate and that makes it fair . If this is the case, they are taking advantage of our production and selling it at a higher rate to our neighbors or those near our production and even to us. How can this be fair? We should own all the power that we produce by ourselves, not them. Also, a large percentage of power is lost in transmission from the power plants to our homes, solar panels are already out near our homes and help power neighborhoods far from the power plants. This should only help them be more profitable with net metering. See this link here. <http://insideenergy.org/2015/11/06/lost-in-transmission-how-much-electricity-disappears-between-a-power-plant-andyour-plug/>

The last flaw in the way they charge people with solar is that they assume every home is equal and therefore charges them all equally. This is not the case. There are net metering customers that are only offsetting 30% or so of their power needs with solar panels, others offsetting 50%, and others 90%. These can't all be placed in one category and exclusively charged a certain way from the utility company if they are all receiving different amounts of power from the utility company. That is not fair I strongly oppose this proposal by Rocky Mountain power .

Thank you,
Kelsey James

Oppose the solar rate calculation schedule

1 message

Rachel Adams <adams.rachel528@gmail.com>

Mon, Nov 14, 2016 at 9:44 PM

To: Psc@utah.gov

Rocky Mountain Power's proposed rate calculation schedule for solar households should be opposed. The regressive rate schedule demonstrates a conflict of interest for the utility as it effectively punishes alternative power. Rocky Mountain Power's proposal also does not take into account the significant personal investment already undertaken by the consumer or the economic and environmental benefits of solar power in Utah.

Protect the consumer and oppose Rocky Mountain Power's proposal.

To: psc@utah.gov, Mikelle Williams <milliwik@gmail.com>

My wife and I don't own solar panels, yet we still oppose this rocky mountain power rate increase for those that have solar at their house. We should be subsidizing good behavior in our state that will help improve our air quality. My mom is thinking of moving out of state because she has Asthma and my wife wants to move as she doesn't feel safe letting our kids play outside on bad air quality days. We can't even let our kids play outside!! Time for us to take action at the local level and ensure a future for our children.

Thanks,

Rocky Mountain Power Solar proposition changes comments

1 message

J. Godfrey <mortgage.godfrey@gmail.com>

Tue, Nov 15, 2016 at 6:07 AM

To: psc@utah.gov

Public Service Commission:

I think Rocky Mountain Power's Monopoly on the Public Utilities is a disgrace and we should open it up to free competition. However, specifically to their recent proposition to increase charges to Net metering customers they want to charge a \$15 Billing fee. This charge to Net Metering customers is not a fair charge, nor is it inline with the time it would take. The computer would do this automatically as it does with everything else. They are claiming that the billing to Net Metering clients are more difficult to do and so they need to charge them more. This is simply corporate greed. According to the KSL article they put out on Sunday November 12, they are also claiming that Net Metering customers use the grid at night when there is no sun and there are maintenance costs to the grid that net metering customers are not paying because they are using substantially less KW usage and Rocky Mountain Power cannot charge them. On every bill there is a \$6.00 - \$8.00 Basic charge. This charge should easily cover the maintenance charges. When you consider there is 1,200,000 customers of Rocky Mountain Power in Salt Lake alone, they are getting about \$7,200,000 - \$9,600,000 every month. That should cover any expenses they are having. I think we should be having the conversation about deregulating the Monopoly of power and Gas.

To: psc@utah.gov

Look:

I was so close to considering solar options from you. SO CLOSE! But seeing your new proposals, your demand charge is.....I mean come on. Really? Really .

Let's make this a hypothetical. Let's say that as of your reading of this email, I have my solar panels up on the roof of my home. You have to admit, it's the most feasible form of renewable energy available in our great city, county, and state. And given our current environmental situation - I mean, our ski resorts open in a week and none will be in operation - I'd like to try and make whatever impact I can. I'd hope the same of you!

But now, with your proposed demand charge, you're going to attempt to charge me an additional \$20/ month just because I have solar. That is very unfair. You just pulled the fleece over my head - surprise! You got solar, so now we're charging you an extra \$20 just because. That is short sighted, unfair, and puts a chilling effect on more people getting solar.

And that is my major problem. No more hypothetical - I don't have solar. Boy do I want it, because I'd like to lower my monthly bill while also making whatever individual impact I can on this warming climate in which we live. But you're proposed fees, especially this ridiculous demand charge, are simply disincentives to future solar seekers.

We need you to be a leader in emerging energies. I sincerely hope you consider incentivizing solar and other energy sources, diversifying your portfolio, and help us roam the new world of renewables. At the very least I hope you see the short sightedness and unfairness of these proposed fees, and consider alternatives or the status quo.

We will NEED you in the coming years to help guide us through a diverse world of energy. Make the right decision now, and start that journey heading in the right direction.

Sincerely,

Matt Vanek

Request (Closed): Subject: Assault on Home and Small Solar Power Dear Governor Herbert, We had solar panels installed on our roof in August 2015 and were looking to break even in about 12 years. It now appears that we may never break even. What Buffett & Nevada Power did (with help of the Nevada PUC) to destroy home and small solar in Nevada, Buffett and Rocky Mountain Power are now set to do in Utah. You're probably already aware of this announcement by Rocky Mountain Power of "a proposed three-prong rate increase for any new solar customers after Dec. 9"--also "a one-time application fee of \$60 to cover administrative costs and a \$15 fixed monthly rate charge for other costs like customer service and meters." "In addition, the utility company is proposing to charge \$9.02 per kilowatt for peak period demand and 3.81 cents per kilowatt-hour for the amount of energy used — new rate structures that the utility company says more accurately capture costs and benefits associated with rooftop solar customers." As a Vivint spokesman states: "rate changes imposed in Nevada killed rooftop solar installations — dropping them by 99 percent — and led major solar companies to leave the state." and "This is substantially more onerous..." <http://www.deseretnews.com/article/865666906/Rocky-Mountain-Power-seeks-fee-hikes-for-newsolar-customers.html?pg=all> Here's a glimpse into the Nevada demise of home solar "In 2013 Nevada Power was bought by Warren Buffet and he expressed his continued support for renewable energy In early part of 2015 it became aware that the residential cap would be breached in a very short time. Nevada legislature was heavily lobbied by NVPOWER to not increase the caps. So they Nevada legislature did nothing and stated they would leave this up to the PUC. The PUC 3 members are all appointed by the governor and the chairman of the PUC name is David Noble who is also reported to be against solar panels and is only supportive of

geothermal production. "The PUC Not only just rejected the cap increase they also enacted a new rate structure for net metering by slashing over five years the price paid for excess power generated. They also implemented a 15 minute demand fee during peak time. New a grid use rate that increases over 5 years as well. Surprising everyone the 17,000 existing solar residential users weren't even grandfathered as is normal when changes take place. None of these changes PUC enacted were proposed by NVPower. While the 17,000 solar users had entered a agreement with the solar companies they also had to sign contract with NVPower and has been made null and void by the PUC. "Nevada has on average 289 sunny days that is ideal for renewable energy production. The Solar industries had employed 6,000 highly skilled well paid jobs. The Solary companies spent millions in infrastructure, warehousing training and 3 appointed PUC members has gone above and beyond to destroy a Industry that would have help diversify Nevada economics and tax base." <http://www.dailykos.com/story/2016/1/9/1467706/-Nevada-s-PUGhas-just-killed-residential-solar> Is there anything that we little people can do to block or ameliorate the end of small solar in Utah? How thick legislature, and Utah Public Service Commission with Rocky Mountain Power? Hoping that Buffett and Rocky Mountain Power will not have a free hand to destroy our renewable energy investment and that of so many other Utahns, past and would-be future. Please let us know your thoughts. Thank You! Dan Bartholomew

Don't Approve RMP Solar Net Metering Proposal

1 message

Emmy Paget <emmywillow@gmail.com>

Tue, Nov 15, 2016 at 8:19 AM

To: psc@utah.gov

Please do not approve Rocky Mountain Power's new net metering program. RMP is clearly attempting to quash the solar industry in Utah because they are fearful of any competition.

The argument that solar customers are not paying their fair share is ridiculous. What about customers that live in rural areas where each house is a long distance from the other, shouldn't they too be paying more for the grid that serves them? RMP is not taking into account the fact that household solar systems are more efficient than power brought in from the grid as the power is being produced in the same location where it is being used. What about the environmental and societal benefits of solar power, something that absolutely should be considered, especially here in Utah, where we have some of the worst air quality in the nation. Finally, consider the number of jobs, current and future, that will be lost if this proposal were to be approved. My husband is employed by the solar industry, if he loses his job our family will be forced to receive government assistance to survive.

Please make the right decision for the people of Utah,

Request (Closed): Subject: Rate Hike on Electricity for Solar Panel Owners I have sent this message to the Public Service Commission as well as my State Senate and State Representative. I wish to express my concern with regards to the Monopoly Company, Rocky Mountain Power with regards to rate hikes for solar panel owners proposed to start in December 2016. The bottom line is that I do not feel that the rate increase is fair. Though I am not a solar panel company owner, I know that a rate hike will cause irreparable damage to Utah's Solar Industry. Even worse, I know it will not be fair to those consumers who already purchased a Solar System. We recently bought solar panels and they were just installed on October 30, 2016. They are not even on the NET meter yet. Under the current rates and NET metering it would take 10 years to pay for the panels and our system would cover nearly all our electric use if the current design works. If the rate goes through then I just wasted nearly \$40,000 of my own money. We bought these panels with the tax break incentives for both federal and state income tax relief. We also know that Salt Lake County has a huge problem with inversions and air quality, so we thought it best to support a greener environment by using less coal powered energy. Giving in to Rocky Mountain Power and allowing the rate increases will cause significant harm to all Utahans' and especially those that currently own Solar Panel Systems. I am asking for you to help by recommending the Public Service Commission does not approve the rate changes for solar panel owners. If this rate hike is approved I will work with my legislator and the governor's office to create new legislation that helps protects consumers like myself and my neighbors as well as a very large and profitable industry that competes directly with the Monopoly Company of Rocky Mountain Power. Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Against Rocky Mountain Power solar rate calculation proposal

1 message

Jason Wolf <jwolfski@gmail.com>

Tue, Nov 15, 2016 at 9:52 AM

To: psc@utah.gov

Hi,

I am a home owner in Salt Lake City. Currently I pay Rocky Mountain Power to offset my energy use with wind power through their Blue Sky Renewable Energy program. In the future, I hope to add some Solar panels to my house. When I go about this I will purchase my panels at a local business and hire Utah residents to install the panels. This all adds up to tax revenue for the city, county and state. Along with increased profits for local businesses.

As a tax paying citizen I am happy to pay my fair share to crate a better community , but I do not believe that someone should pay more for something they use less. People who invest in solar energy are also investing in the health of Utah citizens. These are people who care about where they live and should not be burdened with increased bills, just because they make a conscious decision to invest their money in local business and my health. If Rocky Mountain Power increases the cost of using solar for my neighbors this will greatly af fect my decision to invest in clean renewable energy in the future.

As a resident and bike commuter of the Salt Lake valley , I am keenly aware of our need to reduce carbon emissions. If Rocky Mountain Power is allowed to increase the cost of using solar this will only hold Utah's economy back and stifle Utah from becoming a leader in America's future in clean energy for future generations.

I've grown up healthy and rarely sick. Now that I bike commute, I have noticed an increase in respiratory congestion and I have developed exercised induced asthma. So I know we need to look at ways to create a vibrant clean future for Utah.

Sincerely a concerned citizen,

Jason Wolf

Docket 14-035-114 Rooftop Solar

1 message

Daniel Hellwig <danhellwig@yahoo.com>
Reply-To: Daniel Hellwig <danhellwig@yahoo.com>
To: "PSC@utah.gov" <PSC@utah.gov>

Tue, Nov 15, 2016 at 10:33 AM

To whom it may concern,

I am writing to voice my strong concern about the proposal to increase in charges to rooftop solar customers. I find it disturbing that these proposals are not supported by anything more than an impact study authored by Rocky Mountain Power. I suggest a neutral study or at the minimum a neutral review of the RMC study to ensure it is an accurate representation of the costs associated with Rooftop Solar.

I also suggest delaying this deadline to allow the people of Utah to understand the study and make an informed decision as to how to go forward.

I have purchased Rooftop Solar on a property I have since sold and was planning on doing so again on a property I just purchased this year. I find it unfair that this proposal is so rushed that I will not have the opportunity to be "grandfathered" in under the old rate/system.

I am concerned about the growing health problems and local environmental impact that is plaguing Salt Lake City and Utah. Utah's environment is warming, negatively impacting our tourism. Utah's air quality is declining, negatively impacting our health, economy and quality of life. We have an opportunity to utilize our vast resource of sunlight to save our constituents from the massive cost of repairing our environment, tourism and health.

We NEED to create incentive for clean energy not continue to make it harder, more expensive and more difficult to procure.

The health and environmental impact are becoming terrifying. Please do your part to curb global warming/climate change and save us from the massive health risks that our unclean air is causing.

Thank you,

Daniel Hellwig

Questar solar rate request

1 message

Tim Mitchell <tim0804@gmail.com>

Tue, Nov 15, 2016 at 10:36 AM

To: psc@utah.gov

Solar power is not free as the equipment capital cost up front is expensive and takes years to amortize into profit.

I agree there should be a charge for the net meter and its installation.

The growth in the Utah area has been rapid causing Questar to increase the infrastructure, however the private solar users help reduce that increased infrastructure cost by providing power to the grid that Questar does not have to provide.

They see the advantage to solar and have built a large solar farm and plan for more.

I do appreciate that current solar users are being grandfathered in rates.

Questar sends monthly newsletters with the bills that indicate how to save power. Solar users save power and provide power back, especially during peak A/C hours of the summer.

Please carefully review the proposal and temper it with the future solar customer's view of the advantages. The current tax incentives may diminish or disappear.

I saw a FACEBOOK post that indicate AZ had changed solar rates and solar companies have left the state. Not sure of the source however.

Rocky Mt Power plan

1 message

Kathy Fives <kathyfives@comcast.net>

Tue, Nov 15, 2016 at 10:36 AM

To: psc@utah.gov

I am writing to plead with you not to raise fees and rates on solar power users in Utah. Salt Lake City has such horrible air pollution in the winter that will be lowered by people using solar, rather than coal or oil to generate electricity. This is a huge concern...my daughter lives in SLC and is pregnant and pollution is unhealthy for her and her baby, as well as the whole populace of SLC.

My son-in-law works for the solar industry and could lose his job if the rates are raised so much as to make solar non-competitive.

Why would you want to raise pollution, lose jobs and not let people do something good for the environment and the planet?

PLEASE don't raise the rates!!

Kathy

Say NO to Rocky Mountain Power Solar Proposal

1 message

Mandy Bowen <mbowen@vcbo.com>

Tue, Nov 15, 2016 at 1:04 PM

To: psc@utah.gov

Cc: david bowen <dbow32sl@gmail.com>

Please, Utah Public Service Commission, do NOT allow RMP to get this passed. We have invested in Solar Panels and don't feel it's right for RMP to benefit from OUR Solar purchase. These fees will discourage people from going solar. I think they're afraid of losing their bonus checks and that's why they're doing this. Please don't allow this to go through. I know 4 couples who are looking at getting solar since we have but will not go through with it if this passes.

Sincerely,

Mandy Bowen

Rock Mountain Power proposed rate hikes for solar customers

1 message

Alex Wight <awight@gmail.com>

Tue, Nov 15, 2016 at 2:06 PM

To: psc@utah.gov

To whom it may concern:

The proposal put forth by Rocky Mountain Power is a blatant pushback against early adopters of clean energy and MUST be struck down.

Two things are particularly egregious to me with this proposal:

1) Utah claims to be a "free market state" where the market decides which business models thrive and which do not. The market is speaking loud and clear! Yet Rocky Mountain Power has complete monopoly on our electricity and their proposal flies directly in the face of any attempts to let the market decide for itself.

2) Utah claims to be a "family friendly state", but in reality, life along the Wasatch Front is anything but family friendly due to the horrible air quality we suffer through at various times of the year. Clean solar power IS A BOON to any societal effort to reduce air pollution. Not only should this proposal be struck down for this reason, but the State of Utah should offer further incentives to dramatically encourage the use of solar wherever and whenever possible. This can be our legacy!

The state has a chance to send a message here - WE CARE ABOUT YOUR HEALTH, NOT OUR CRONIES IN ROCKY MOUNTAIN POWER! If the state passes on this opportunity, history can only look with disdain on the shortsightedness of the decision makers.

Please think carefully and ponder what your grandchildren will think of your decisions!

Respectfully,
-Alex Wight

Rocky Mountain Power/Solar

1 message

Tara Hawkins <tarahawkins.logan@gmail.com>

Tue, Nov 15, 2016 at 2:13 PM

To: psc@utah.gov

I am deeply distressed to hear that Rocky Mountain Power wants to charge its Solar customers more. That is completely backwards. Rocky Mountain Power should be paying its Solar customers for the power they supply to the grid.

I live in Logan, which had the worst air quality in the nation each winter. Solar power reduces our emissions and helps keep the air clean. We should be doing everything possible to encourage Solar power

Comments on the Rocky Mountain Power Solar Proposal

1 message

David Johnson <caroldavidjohnson@gmail.com>

Tue, Nov 15, 2016 at 3:19 PM

To: PSC@utah.gov

Attention Commissioners LeVar, Clark, and White:

Attached you will find my comments (also sent via US postal service) concerning my thought on the rushed Rocky Mountain Power solar rate change proposal. It appears to me to be an effort to increase revenues without proper time for careful evaluation. I don't believe they have valid grounds for such action and I am opposed to this "hurry-up" way of handling my utility rates by a sole provider. Thank you for your time.

**Commissioners Solar.doc**

Commissioners
Thad LeVar, Chair
David Clark
Jordan A. White

Heber M. Wells Building
160 East 300 South
Salt Lake City, UT 84111

Gentlemen,

15 Nov 2016

I have recently read a report in The Salt Lake Tribune about a rate change request for solar household customers. Although the concept is complicated and not entirely comprehensible by the normal electrical user, the reported sought rate change seems excessive and not logical. These comments are concerning that request as reported.

1. The charge that Rocky Mountain Power considers that the net-metering customer (solar owner) receives “a \$400 yearly subsidy” does not seem logical.

Solar owners deliver their generated energy directly to the Rocky Mountain power grid. The solar owner provides the system to do this at the time of installation of their solar system. Rocky Mountain power is in fact buying from *another* provider who just happens to be smaller than other providers – and closer to the end user. Solar owners should not be charged additionally to transmit (transfer really) their solar generated energy to Rocky Mountain’s grid/customers.

The solar owner does not need extensive transmission lines with attendant rights-of-way, maintenance, transformers, or any of the other specialized necessary infrastructure required of distance AC electrical transmission.

I doubt that other energy suppliers to Rocky Mountain Power pay for infrastructure costs that Rocky Mountain Power wants to charge solar owners.

When Solar Owners *use* Rocky Mountain power, then they pay rates reflecting the cost of using Rocky Mountain’s infrastructure just like everyone else. When they “*sell*” power to Rocky Mountain Power, they should not pay infrastructure fees. The statement that solar owners receive “a \$400 yearly subsidy” appears not to be true.

2. The proposed \$60 application fee for solar users: Currently there is considerable lag in the approval process – mostly by local city officials and Rocky Mountain Power. To charge the user with a fee for a lengthy and inefficient process over which we have no control is onerous. The \$60 application fee for solar customers is excessive. We shouldn’t be burdened with inflated costs of an inefficient approval system. Treat it like any other construction approval.
3. The Rocky Mountain power plan to grandfather the old rate to current solar customers is to be commended. I chose solar power not only because of environmental logic but also for its long term dollar benefit. I have already made the investment although the project is not complete and may not be at the time of your hearing decision. As my investment was made considering current rate regulations then it should qualify for grandfathering. Grandfather into the old rate on terms of purchase commitment not terms of completion.

Thank you for your time and consideration.

1 message

Nate W <woodward.nate@gmail.com>

Tue, Nov 15, 2016 at 3:39 PM

To: psc@utah.gov

Please consider the full implications of this proposal from Rocky Mountain Power . You may think it's "not your job" to do so. You may think that your only job is to consider the "fairness" to RMP's "regular" customers. But I would ask, whose job is it to consider the full picture, if not yours? "Fairness" in utilities is a very fluid and subjective concept, regardless of RMP's arguments to make it look otherwise. You *must* consider this proposal's widespread implications, and measure how *reasonable* it is when contemplating fairness.

Is it fair that I pay for the police in my city that have done nothing for me personally except issue speeding tickets? Is it fair that I pay for fire and other emergency services which I have never utilized? Getting closer to the topic at hand, is it fair that I have to help pay for rural utility customers to get their electricity , gas, and water pumped and carried for miles upon miles when I live in the center of town, a mile from a power substation? This is simply how shared resources and regulated utilities work! Why aren't utility customers billed based different amounts based on their location, or their wastefulness, or the costs incurred by the utility by each customer? Wouldn't this be more fair? Absolutely not. Utilities are *full* of subsidies. We all understand that. Have there been hoards of citizens banging on your door , complaining about the extra few pennies they may or may not be paying on their bill because of solar customers? No. I know you've seen a few outspoken people, but only because Rocky Mountain Power is trying to rile up its customers against net metering using careful PR and skewed surveys.

According to articles reporting on this proposal, "Rocky Mountain Power says they pay homeowners with solar panels about 14 cents per kilowatt hour for any excess power the customers produce." This is blatantly and ridiculously false. Rocky Mountain Power pays *nothing* for the excess electricity. They have not paid me a dime for my excess electricity which reduces load on power plants during the morning and afternoon and into peak usage periods. They give me a *credit* for each kWh that I offload onto the grid. That electricity naturally flows to the nearest need, which would be within my neighborhood, and that customer pays full retail price to Rocky Mountain Power for that electricity .

RMP wants to set the net metering rate at around \$0.04 per kWh for someone with rooftop solar , along with other extremely complicated rate variables, then sell electricity right back to that same person when the sun is down for more than double that rate, as if residents with rooftop solar are wholesale electricity brokers or should be treated at all similarly .

If this goes into effect, it *will* devastate the solar industry in Utah. Regardless of the profit argument (RMP says income from these changes would go "into a fund that will be going to our other customers" whatever that means), RMP is trying to completely squelch a model that appears inconvenient to their monopoly .

This has nothing to do with "fairness" to other customers. To claim that is nothing short of ludicrous. Every customer has a basic bill of about \$9 to pay for grid maintenance and other internal costs. You can pinpoint any number of subsets of customers and charge them greater rates because their business costs more money for the utility. But utilities don't do this, except in situations like this where they feel threatened.

Getting more to the heart of the matter, RMP's analyses have not and do not consider the full benefits of solar. They don't even consider the full *financial* benefits to *their* bottom line and therefore that of *all* customers. They disregard the overlap of solar production with peak energy demand times. They overemphasize grid maintenance with vagueries about how net metering customers somehow introduce extra costs to grid maintenance. They ignore what is realistic and focus on what appears to them to be convenient, just as they have done with every prior proposal along these lines.

On a somewhat unrelated note, Rocky Mountain Power is looking into sourcing funding for huge developments to EV charging infrastructure and incentives for installation of such infrastructure. Some of this funding may come from federal grants, but it appears that some of these costs will be paid for directly by regular

customers... This sounds an awful lot to me like "unfair" subsidization to benefit a small subset of customers. (See link 1 <https://www.rockymountainpower.net/about/nr/nr2016/electric-vehicles.html> and link 2 <https://www.rockymountainpower.net/env/utah-sustainable-energy-plan.html>) Obviously, "fairness is simply a buzzword meant to incite strong emotion and elicit support from the PSC. I hope you don't fall for it and see past to their true motives. Rocky Mountain Power is a corporation and will do everything in its power to protect it's old business model rather than adapt and change to better fit a changing world.

Please consider these comments and those of so many others in opposition to RMP's latest proposal.
Nate W

Phone: [\(801\) 530-6716](tel:(801)530-6716)

Subject: Regarding Docket 14-035-114

TO WHOM IT MAY CONCERN:

I am writing to show my opposition to Rocky Mountain Power 's proposal to monopolize energy companies by charging all future solar customers when they choose this alternative energy.

One of the biggest reasons we purchased an expensive solar system for our residence is because the government put so many incentives in place (both Federal & State) making it more affordable and more appealing. How can they now penalize us for doing something they originally encouraged? We are currently still financing our system (with accruing interest) and adding more fees on our RMP bill will make our solar purchase very frustrating & will cause nothing but regret.

We are also worried about what it might do to the resale value of our home should solar prices become more costly.

People should not be financially punished for choosing alternative energy sources!

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Subject: Public Service Commission

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to adjust the net metering rate schedule for new solar installs. First, I want you to know that I already have a rooftop solar system that would be grandfathered into the existing rate schedule, so I would not be directly affected by the rate changes. I also am not an employee or investor in any company that installs solar. I say this to point out that I don't have a vested financial interest in these proceedings, and instead my outrage is based solely on a desire for honesty and fairness. Second, I also want to say that I agree with the main premise of Rocky Mountain Power's argument - that the current net metering structure will *eventually* cause regular customers to subsidize solar net metering customers. But RMP's actions are based completely on improving their own bottom line, rather than trying to be fair or protect their customers. Let's dissect RMP's new rate schedule proposal. The application fee for a new net metering application is completely reasonable. In fact, I was surprised when I didn't have to pay anything to have RMP come out and change my meter, not to mention the paperwork and actual design review that they did. Second, the new \$15 net metering surcharge. While a minor minimum fee could be reasonable to cover flat costs associated with managing account, there is already a \$6 minimum charge on our bills, and \$15 is a spite charge. It does not correspond to any actual cost that RMP bears in order to support net metering customers. Basically they're saying that they had a capital cost to build power plants and other infrastructure, in expectation of getting a return on investment of a certain number of years. But now people don't want to buy enough of their services, so they're trying to mandate minimum charges to correct their mistake of mis-predicting future demand. Since when are customers responsible for ensuring that a mismanaged company gets bailed out? Oh yes, when they can convince the government to bail them out! Third, the cost of energy. This is where RMP should be focusing their efforts. When we look at why net metering customers need RMP at all, it's for using the grid as a "battery" - to absorb excess production, and provide in times of shortfall. So let's make the energy rate reflect that - by not having a 1:1 exchange of energy being bought vs. being sold. It should instead more closely reflect wholesale energy rates. Which actually means that at times the energy being "sold" back to RMP is above retail, and at other times is far below retail. It just depends on the time of day. Instead RMP is proposing dropping the rate substantially for both directions, in a bid to show good faith, but hide the most

egregious part of their new rate schedule: the demand charge. The demand charge, and RMP's outright lies, are what will really kill solar. Their statistics say that the average peak demand of a household is 1.6kW. Let me help you understand this. A typical *hair dryer* uses around 1.5kW. A microwave could use 1.8kW - the limit of the smallest electrical circuit in a house (1.8kW). Basically they're saying *nobody* uses air conditioning (3-10 kW depending on size), a stove (3-5kW), an electric dryer (5-8kW), etc. Nevermind anyone with a hot tub (3-6kW), an electric car (6-20kW). Looking at my own energy usage last month, I paid an electric bill of ~\$80. If I did not have solar panels at all, it would have been ~\$140. If I was on RMP's new rate schedule, with solar, my bill would have been \$160!!! I would literally be paying RMP *extra* for the privilege of producing a significant fraction of my own energy, and also exporting a good portion of that during daytime, near peak, helping RMP satisfy the load for other customers. This doesn't even count my own expense of paying for the solar panels. In exchange, because I just happen to use some electricity faster in the evenings, RMP gets to gouge me. Tell me this makes sense?!?! aa In conclusion, I hope that you can look into this issue without taking RMP's "experts" at their word, and instead see through to how this actually affects customers. Do not allow the government to essentially bail RMP out. And remember - RMP is building their own solar "power plants". If it's good financial sense for them to do it, how can it be so bad for them to have other customers do it? They really just want to hoard the entire solar pie to themselves. Cody Cutrer 2512 Apricot Place Saratoga Springs, UT 84045

Thank you.

Subject: Public Service Commission

Request (Closed): Stop crony capitalism!!!! On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as an economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as an economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Our family is very concerned about our air quality, and as such, invested in solar panels for our house to reduce our carbon footprint. We did this knowing that eventually they would pay off. If the fees proposed were put into place at that time, we never would have been able to afford the panels. Your leadership on this issue is critical. Please help us care for our Earth. Thank you for your time.

Subject: Public Service Commission

Request (Closed): Dear Governor Herbert, I am very concerned about the impacts of polluting industries on my health, those in my household, and on those that encounter pollution in its area of contamination. As you know, the Salt Lake Valley is tremendously prone to poisonous pollution -- but so is the fantastically beautiful and yet -- now -- perennially smoggy area around Rocky Mountain Power's coal-driven generation plants. My personal contribution to eliminating where possible every polluting source (including not owning a polluting automobile, personally) means I am working

towards acquiring a solar array for my house. On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. Subject: Public Service Commission

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees make growth for the solar industry much more difficult. I just signed up for solar to be installed on my home and barely escaped this new fee, but am very disappointed by the change for future customers. I don't know if my peers can still afford it and won't be able to recommend it to others. Solar power is a great energy solution in our future, so it should not be hindered, but encouraged, especially in Utah where our dependence on oil directly effects our air quality. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Request (Closed): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as a economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Subject: Public Service Commission

Request (Closed): I will make this quick. My family recently added a \$14,000 in rooftop solar to our home. We did so because of federal and STATE tax credits. Based on those tax credits and the cost we could justify the purchase. With this new fee proposed by Rocky Mountain Power there will be essentially no financial reason to do what we did. We trusted in the state's support because of the tax credit. Please don't add hefty fees to our monthly electric bills for adding solar. I could see paying a little to upkeep the system, but what Rocky Mountain Power is asking for is outrageous. Mike

Thank you.

Request (Open): Dear Governor Herbert, On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. You only have to look toward Nevada to see the effect. Their commission imposed outrageous fees on owners and overnight hundreds of solar industry jobs were lost. Utah prides itself as an economic development state. Your office has worked hard to cultivate growth and it has paid off. If these fees are imposed one of the fastest growing industries in the state will be greatly harmed. Your leadership on this issue is critical. Thank you for your time.

Thank you.

Subject: Public Service Commission

Request (Closed): Dear Governor Herbert, I am familiar with the utility-related phrase "guaranteed rate of return," but

perhaps it's time to remove this phrase from our lexicon and change the way utilities make their money. Please give consumers a break, not a rate hike. On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop systems. The fees are among the highest proposed by any utility around the nation on rooftop solar customers. If imposed, the fees would effectively end the growth of the rooftop solar and devastate the solar industry in Utah. The solar industry provides almost 4000 jobs in the state and hundreds of millions of dollars in economic activity. All of which will be negatively affected if these fees are put into place. Fwd: New RMP solar proposal is the wrong move for Utah's future

1 message

Carol Revelt <crevelt@utah.gov>
To: PublicService Commission <psc@utah.gov>

Wed, Nov 16, 2016 at 8:06 AM

----- Forwarded message -----

From: **H Harnsberger** <H.Harnsberger@hsc.utah.edu>

Date: Thu, Nov 10, 2016 at 7:21 AM

Subject: New RMP solar proposal is the wrong move for Utah's future

To: "jdalton@utah.gov" <jdalton@utah.gov>, "crevelt@utah.gov" <crevelt@utah.gov>, "psc@utah.gov" <psc@utah.gov>, "mbeck@utah.gov" <mbeck@utah.gov>

Dear PSC folks and U Office of Consumer Services,

We have recently spent \$35,000 to put Solar on the roof of our home. We did this because we wanted to stop buying coal-generated electricity and reduce our carbon footprint. Please don't allow RMP to penalize us with new fees and simultaneously kill the solar industry in Utah. We need everyone in this state to do their part to reduce pollution and push for renewable energy solutions.

We understand that there is a "grandfather" clause in the current proposal but hope that solar installations in Utah will continue to grow rapidly. We can see that some fee may be necessary to make sure the system works for all, but we recommend that this fee be very carefully considered so as to not derail the solar momentum in the state.

Is there a website where we can put my opinion into the comments before the Public Service Commission?

Ric Harnsberger, MD

Fwd: Rocky Mountain Proposed Solar Rate Hike

1 message

Carol Revelt <crevelt@utah.gov>
To: PublicService Commission <psc@utah.gov>

Wed, Nov 16, 2016 at 8:12 AM

----- Forwarded message -----

From: **Josh Zitting** <jzjoshzitting@gmail.com >
Date: Fri, Nov 11, 2016 at 8:17 AM
Subject: Rocky Mountain Proposed Solar Rate Hike
To: crevelt@utah.gov, jdalton@utah.gov, jmaio@utah.gov

To whom it may concern,

I am concerned by the request submitted by Rocky Mountain Power for a rate increase on Solar/Net Metering Customers. We Just recently had a rooftop solar energy system installed on our house and our first month's power bill from Rocky Mountain is still \$8.95. They still charge for a connection fee \$6, a minimum charge of \$2. and the \$.20 Home Electric Lifeline Program. I would be ok with the one time setup/transition fee of \$60 when a house is installing solar, However I think the \$15 per month minimum charge is pretty high considering they are already charging \$8 per month between the connection fee and the \$2 minimum charge.

Thank you for your time!

Joshua Zitting

Fwd: RMP and Solar customers

1 message

Carol Revelt <crevelt@utah.gov>
To: PublicService Commission <psc@utah.gov>

Wed, Nov 16, 2016 at 8:13 AM

----- Forwarded message -----

From: **John Whittaker** <jdwhitta@gmail.com>

Date: Fri, Nov 11, 2016 at 10:38 AM

Subject: RMP and Solar customers

To: crevelt@utah.gov

Dear Carol,

I am writing you to please reject RMP's proposed rate/fee hikes for those who have invested in solar for their homes and business's.

Over the years RMP has requested that customers use less. Their Cool Keeper (Opt - In) Program was a great example. Then several months ago a TV station interviewed a RMP representative who talked about offering financial incentives to high usage customers to use less energy!

Also, please protect the current Net Metering program to insure fairness between RMP and solar owners.

It appears that now that RMP has there own solar farms they want to penalize/control those who have paid for their own solar systems by raising rates for us all and especially those who have solar or want to install solar .

Regards,
John Whittaker
