To whom it may concern,

Regarding check # 14-035 - 114
Instead of taking a negative off-balance
toward households with roof top solar
panels, why not look on Solar energy
as a positive.

We live on a fault. There are many
who deal with a 0.01% interest rate on
their checking accounts post the 2008-
2009 recession. The more fortunate can
invest in rooftop solar.

a few years ago an electrical sub-
station in California was damaged
resulting in blackouts over a wide area.
Could Solar be utilized as an emergency
back up for neighborhood, communities
affected by blackouts from any
cause? Even if a power plant was
affected, your distribution, plants & transmission,
lines would be able to keep functioning
from stored solar energy by utilizing
the excess energy from multiple
households.

Respectfully,
Mary Hunt

I am writing to voice my strong opposition to Rocky Mountain Power's proposal to change rates in order to snuff out the competition from the growing solar industry. I am not a homeowner, and I do not have solar panels, but I believe fining families who choose alternative methods of power is bad for Utah. Using a clean form of energy is one way families are trying to help improve the air quality in our state. This rate change would kill the incentives regular people have for choosing cleaner energy, and ensure only the very wealthiest have any choice in where their power comes from.

We need to be moving towards diversifying our power consumption rather than entrenching a monopoly for one fossil fuel company. There are many solar companies in Utah trying to do that, and this rate change could result in massive job losses throughout the industry in our state.

This rate change is bad for families, bad for the environment, bad for business. It's only good for the profit margins of one company. Utah deserves better.

Sincerely,
Susan Bailey
