To: psc@utah.gov

As a 74 year citizen of Salt Lake, and a new owner of solar panels, I'm not sure I will live long enough to recover my expenses. I made the investment believing that Salt Lake City air pollution would be improved for my children and grandchildren, not to mention all of the other families in Salt Lake. When I heard that Rocky Mtn. Power wanted to raise my rate because I installed solar, I felt sure that your commission would speak out against it. I strongly hope that you will. I know that people my age won't have to worry about the changes in our climate, but as a caring person for those to come, I know that the time to curb carbon is NOW.

Please don't let me and other thoughtful citizens down. Rocky Mtn. Power will not go broke without an increase. It seems like a battle between share holders and children. Please choose the kids.
