Hello,

I am writing to ask you to not allow Rocky Mountain Power to lower incentives for people to choose solar. Solar is about more than money, it's about the wellbeing of the future of our planet. I ask that you do not let corporate greed to sabotage the future of our planet!

Thank you.

Rocky Mountain Power rate increase for Solar

1 message

Kathy English <kathy.english@gmail.com>

To: psc@utah.gov

I sincerely hope that the rate increase for Rocky Mountain Power's solar customers will be denied.

I believe that we as individuals must do everything in our abilities to stop the destructive pollution caused by fossil fuels. Other nations such as Germany have made great strides to clean up their air and environment. This came about once they began to reimburse the solar power input from citizens. If Utah imposes rate increases for solar power we are doing the opposite. We are rewarding greed and irresponsible use of our environment. We are thinking short term, and not looking out for the best interests of our children.

We live in an environment where the mountains do not let pollution escape. We need to be extra vigilant to protect the health of our citizens. We do not need to continue status quo. We are intelligent and we can change.

Sincerely,

Kathy English

Hello!

Just dropping you a line to let you know as a lifelong Utah resident, I have seen how drastically emissions/coal burning power usage has changed the Utah environment and air quality. Please please do not fast track Rocky Mountain Power to shift the current solar rate. I think solar is the future. We need sustainable energy. We need to protect what we have left for the future generations.

Thank you!

Sally

Rocky Mountain Power rooftop solar proposal

1 message

Patrick Park <proypark51@gmail.com>

Tue, Dec 13, 2016 at 3:57 PM

To: psc@utah.gov

I would like to voice my concern and opinion regarding the recent proposal by Rocky Mountain Power to allow a rate and fee increase for rooftop solar customers. I appreciate your intervention in not allowing the December 9 cut off for applying for net metering. The changes proposed by RMP would seriously deter individuals in their efforts to manage power costs and make a positive contribution to clean energy use in the valley. I feel RMP proposal is excessive and was not collaborative in establishing a new rate structure. I am in the process of installing a solar system at this time and under the proposal would not be impacted as dramatically as future users but I still feel it is important to continue to promote and encourage clean power options. Please vote in the interest of the community and not allow RMP to implement these excessive rate and fee increases.

Docket No 14-035-114 RMP Net Metering Program

To: psc@utah.gov

I oppose RMP's proposed Net Metering Program. It takes a giant step backward in the efforts to reduce pollution, to use sustainable resources, and to encourage people to conserve energy. It is short-sighted in looking toward future energy configurations. We installed solar panels a few years ago, knowing we would likely never recoup the outlay costs. Had we not benefited from federal incentives, we probably would not have been able to afford it at all. We were willing to absorb these costs because the long term benefits to our local community and planet are worth it. What we did not anticipate, but we have since found as another major benefit, is that having the panels changed our mind-set about how much power we use. We are much more conscious about reducing our power usage in general than we were before we installed the panels.

It is also hypocritical to me that Rocky Mountain Power encourages customers to invest in their solar programs, but now want to penalize people who are willing to pay for their own solar panel purchase and installation.

Please do not approve Rocky Mountain Power's Net Metering program.

Thank you,
Becky Rambo
