To: psc@utah.gov

To whom it may concern:

Whether you believe that Global Warming is levied by humans or not, we all know that the pollution in Utah is awful, particularly during the winter months when we experience many inversions. One of the best things we can do is use non-polluting energy resources as much as possible. Rocky Mountain Power's November proposal to increase rates for Solar Customers is one of the most anti-clean energy proposals I've ever heard of. Our air quality will suffer, our health will suffer, Utah will suffer! I beg you to reject Rocky Mountain's proposal when it is considered again in August and help get Utah - which is a prime location for solar power - cleaner and healthier. With how big of a problem our pollution is, we need to be doing everything we can to clean our air.

Thank you for your time and assistance
