Hello. The proposal RMP is making is injustice defined. This proposal is obviously to eliminate the competition on power. The solar rooftops provide clean green energy for the grid vs the coal and nuclear RMP currently uses.

The half effort of RMP to go green must be left in the publics hands as they have no real desire to do so. RMP is also a monopoly as all power companies are. Solar is a booming industry that provides jobs and tax dollars to the economies in where they operate.

Doing this will also jeopardize many current solar customer warranties as many of the businesses will fold if this passes.

There are already plenty of barriers to people going solar. There are many propaganda and misinformation campaigns likely funded by RMP and other power companies that many people reject the proposal of solar outright. "EVEN THOUGH THEY WILL SAVE MONEY"

Please do the right thing and don't let RMP get their way. Please reject their proposal on its face and tell them to reduce the barriers and stop participating in any disinformation and propaganda campaigns against solar.

They even printed solar warning on their bills recently!!!
