Sirs,

I strongly oppose the rate hike being considered in Docket #14-035-114 for Rocky Mountain Power.

To counteract our air quality issues we should be strongly encouraging solar energy development as it would reduce power plant emissions but also encourage use of electric vehicles. If people could generate their own power this would further reduce the cost of vehicle transportation we all depend on.

There is also an individual freedom issue where residents should not be penalized by a monopoly industry if they want to develop their own energy.

The health effects of reducing pollution from current RMP coal generation and the requirements to mitigate regional haze would also be helped by more residential solar energy.

Finally, Utah has many jobs in the solar energy industry and should be striving to be a model for clean energy development rather than fighting to preserve an uneconomic historic method of power generation that served us well for many years but is approaching obsolescence.

Many Thanks,

IAN WADE
