On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

Thank you for your time.

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

Thank you for your time.

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

Thank you for your time.

I sincerely believe that solar customers are benefiting both the economy and the environment by utilizing solar energy rather than other means. We solar households produce far more electricity than we use, and the extra is fed back into the grid, which would essentially mean we are providing the state and Rocky Mountain Power with free energy, for which they now want to charge.

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

Thank you for your time.

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

To: psc@utah.gov

I am writing to register my disagreement with RMP's intent to increase the costs for rooftop solar in Utah.

-Rooftop solar is creating jobs and is an economic driver in the state, so should not be discouraged.

-Rooftop solar is another "arrow in the quiver" of energy sources and permanently removes demand from the grid.

-Rooftop solar is beneficial to the environment, which is important for air and water quality, two areas where our state suffers.

-Rooftop solar allows people to gain increasing autonomy from utility electricity, which is important to many residents.

Thank you for considering this input.

Regards,  
Bryan Luftglass

The appropriate pricing for solar power will require careful study and may necessitate changing the underlying systems used for metering and paying for electricity. Rather than targeting a single group (rooftop solar users), I would rather see Utah pioneering new strategies for managing energy markets.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

I do not support additional costs for those who support the implementation of real clean energy solutions for the wasatch front. Those who take concrete steps to improve our poor air quality should be rewarded not punished with extra fees. The studies that are indicated to show there are extra costs associated with not using older and dirtier forms of energy should not be used as justification for these higher costs.

Thank you for your time.

## Oppose Solar Fees

1 message

---

**Shaina Runolfson** <shaina.runolfson@icloud.com>

Sun, Jun 4, 2017 at 5:55 AM

To: psc@utah.gov

My name is Shaina Runolfson and I am a constituent from Holladay, UT 84124.

I am emailing you today, to ask you to oppose the solar paneling fees in Docket 14-035-114: Rooftop Solar PSC Docket.

Rocky Mountain Power is proposing three new fees for rooftop solar customers. These fees would make it so Utah Would have some of the highest solar fees in the country. These fees make no sense since Rocky Mountain Power (RMP) has not proven solar costumers burden other ratepayers or even the system with significant costs. RMP also greatly overestimates the cost of servicing solar costumers, and under sells the benefits of using solar.

Solar power is a valuable, renewable source of energy. Utah so desperately needs alternatives to burning coal. Our children's lungs simply can't take it, as asthma cases sky rocket.

Please oppose any more fees or disincentives for alternative, clean energy.

Sincerely,  
Shaina Runolfson

NO rate hikes for roof top solar.

I want to be able to maintain power to my home in case of a power outage by RMP. This happened with a big blizzard a few years back and though we lived in the city we were without power for 24 hours. We had to burn wood to heat the house and had a generator to power a few lights but all at the cost to the air quality in the valley which I felt bad about. I have pretty regularly had power outages when transformers blew up, usually in the summer time. No remuneration from RMP for my inconvenience then, lost food, etc. What if there is an earthquake? So, Rocky Mountain is going to get a rate hike to cover those lost revenues and the cost of repairing their antiquated grid?

We need to be moving forward in this valley to more sustainable energy sources which will be better for our environment and our health. I think it is wrong to punish consumers with rate hikes for trying to be self sufficient and environmentally responsible, while padding the fat wallets of irresponsible power companies.

Rocky Mountain Power needs to work with us, not against us. And don't let them fool you. I pay extra each month into their 'Blue Sky' program. Do I get anything back in return for that. No, just more requests for rate hikes on people who are using solar.

Sincerely,

Jane MacPherson

The new fees proposed by Rocky Mountain Power would kill the competitive marketplace for energy, and in my opinion are monopoly-creating economic disincentives calculated to cripple and kill the solar energy market for household customers. Competitive markets form the bedrock of US capitalism, are a crucial protection for customers against predatory and extortionist monopolist corporations, and must not be compromised.

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

Don't raise rates on rooftop solar, either for present or future customers. As an owner of solar panels just since February this year I've provided over 2MWh to the grid at no cost to RMP. I put up this generating station at my own expense. RMP should be paying me for my power generation, as utilities in more progressive utility districts do. To ask me to pay more than my monthly connection fee is grossly unfair, as I am saving RMP the cost of adding more power generation and transmission capability for our rapidly growing state. I am saving them from environmental mitigation costs. And, I'm doing my part to contribute to clean air in Utah. People who choose to do this should be encouraged, not punished, nor be required to make up for RMP's supposed lost revenue.

It's time we in Utah support the growth of the solar industry, which is rapidly overtaking fossil fuels as an economic and employment driver, besides its obvious benefit of not destroying the planet. The proposed charges are not only unfair, they're unwise and show a lack of wisdom.

Dear Govenor/Policy Makers,

I am writing to you to make clear my opposition to Rocky Mountain Power's proposed rate changes. I work in the solar industry and the arguments and case that the utility has presented are biased and insufficient to justify what they are asking for. Other parties have done a pretty good job of making this case, so I am instead writing to you to convey my hope that you will side with the thousands of people, like myself, that are employed in the solar industry and oppose Rocky Mountain Power's proposed rate changes. How you and the PSC decide to proceed holds thousands of well-paid jobs and a thriving sector of our post-industrial economy in the balance. Why would anyone willfully legislate away these jobs? Just so a massive out-of-state corporation can continue growing its bottom line? It is clear that this is the nature of their request when you strip away all of the rhetoric. So you have a rare chance to support an issue that has universal support across the political spectrum. Renewable energy embodies the core values of this state: self-sufficiency, competition, freedom of choice, and environmental stewardship. Please stand up for the clear benefits of solar energy and the people like me who do not have a voice at the table.

Thank you very much,

Alex Jahp - Commercial Project Manager

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

Thank you for your time.
