Dear UT PSC,

And it came to pass

Among the high and low places around Mount Coal-Morah-Moroni-Ha

The Rocky Mountain Power Gadiantons, with their secret oaths and covenants, governments, and friends Warren Buffettonhi and the KOCHites, coal-conspired to just burn baby burn! They CONSPIRED to burn dirty coal forever violating the law of the land, even without filtering their emissions regardless of The Law to do so! With toxic pollution they poisoned The People, recklessly polluting THEIR air, water and land. The very misguided Gadianton gang and their accomplices conspired to prevent The People from switching to SUSTAINABLE USE AND PRODUCTION OF CLEAN ENERGY! They conspired to kill solar, wind and geothermal power. They were GLOBAL WARMING DENIERS, anti free-market, anti solar, anti-innovation, anti-science, ANTI-TESLA thus a serious danger to The People's health and THEIR inalienable rights to a clean and livable environment. They were with the wicked one. They have their reward. Do What Is Right?, Let The Consequence Follow.

They ignored their prophet's warnings and revelations and became the conspirators..."Behold, verily, thus saith the Lord unto you: In consequence of evils and designs which do and will exist in the hearts of conspiring men in the last days, I have warned you, and forewarn you, by giving unto you this word of wisdom by revelation." DandC 89:4

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

I am a former Californian who installed a large solar array on my house in the Sacramento and saw the benefits of my and my neighbor efforts in reducing overall costs and in reducing the environmental effects of utilizing organic fuels. You should realize that if you ignore our recommendations, we will remove your ability to make any decisions in this State, as we did in California.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

It is hard to believe that there is a need for this comment at this point in history. Utilities and power are needs that people require, the people wise enough to invest in natural, sustainable fuel are to be rewarded not punished for common sense and intelligence.

If Rocky Mountain is having a problem with making a fair profit, demand that they acquire management that cuts its excesses and cushy life style.

Utilities should not be private companies, this is where the issue lays, they serve the public, they should be public entities so this demand for excess is diminished

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Thank you for taking the time to read my comments. While I share the same concerns as many who are leaving comment, I want to assert that I truly and deeply feel that solar is perhaps the most practical direction to take with regard to energy production in Utah. I desperately hope that you will consider that many constituents are becoming more and more informed and engaged in public affairs when you decide on how to respond to the rate change proposal. I strongly urge you to protect the growth of solar in Utah by voting against the rate hike.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

As a physician, I can vouch for the ill-effects of pollution on people's health, especially from inversion. Though the causes are multi factorial, to disincentivize the use of clean energy is myopic and misguided. The less dependent we are as a state on fossil fuels, the better our future pulmonary health.

Dear UT PSC,

And it came to pass

Among the high and low places around Mount Coal-Morah-Moroni-Ha

The Rocky Mountain Power Gadiantons, with their secret oaths and covenants, governments, and friends Warren Buffettonhi and the KOCHites, coal-conspired to just burn baby burn! They CONSPIRED to burn dirty coal forever violating the law of the land, even without filtering their emissions regardless of The Law to do so! With toxic pollution they poisoned The People, recklessly polluting THEIR air, water and land. The very misguided Gadianton gang and their accomplices conspired to prevent The People from switching to SUSTAINABLE USE AND PRODUCTION OF CLEAN ENERGY! They conspired to kill solar, wind and geothermal power. They were GLOBAL WARMING DENIERS, anti free-market, anti solar, anti-innovation, anti-science, ANTI-TESLA thus a serious danger to The People's health and THEIR inalienable rights to a clean and livable environment. They were with the wicked one.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

I have a solar system on my home and it works beautifully, providing me with clean energy that does not contribute to our already poor air quality. In fact we should all be encouraging the move to solar and other renewable, non-polluting forms of energy. This will benefit all Utahans health as well as decrease their energy costs. Please side with your constituents, the good people of Utah, and do not succumb to special interests.

Dear UT PSC,

The three/step rate plan is bad for Utah customers . Imposing a flat charge as well as a rate increase and by adding a provision for increases during business hours, you are lessening demand for a renewable energy. It is important to work with consumers who support the environment.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

Rooftop solar is the future of US energy independence. We should expand the ability to harness the power to strengthen the state's energy capacity. It can help the state sell other forms of energy to the rest of the country. Solar is a smart investment in the state and the future.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

I work for On Top Solar and Electric based out of Park City, UT. I helped grow this company personally and have seen it booming. The residential solar industry is amazing and poised to create thousands of jobs in Utah in the coming years as long as the industry is not halted by Rocky Mountain Power's three part rate structure increase. Solar energy is clean and profitable! I urge you not to heed the biased reports by Rocky Mountain Power. I urge you to make a stand for a clean energy future and a booming industry with limitless potential

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Annie Van Alstyne

Dear UT PSC,

Solar is the way of the future and will benefit our planet as well as our economy and the health of our people. Why would you want to squash it? Makes no sense unless you are only thinking in terms of \$'s. But even then, solar is the economic way of the future. Don't stay mired in the middle ages.

Dear UT PSC,

My family is in support of finding alternative energy sources such as solar power. We should be encouraging the future of clean energy not finding ways to destroy the progress.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

Dear UT PSC,

Please consider the best practices and mistakes that neighboring states have made. Please consider the innovation and job expansion potential, rather than listening to a mega monopoly with their short term shareholder's interest top of mind. Think longer term and bigger picture, please. Your decisions will be felt by your children's children. Please make your legacy's impact a positive legacy. Your influence will be felt for a very long time.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Edward Bernardin

Dear UT PSC,

do you have children? What kind of world do you want them to live in? How about their children and their children's children? Life must continue on this planet until something catastrophic destroys it in its entirety. I would prefer that catastrophe to be of natural causes like a comet, not because we as human beings sucked it dry of all of its resources. I am for sustainable and renewable resources! I urge you to check the facts and help us to place more homeowners in control of where they get their energy from. If we continue this model of capitalism, there may not be a world worth living in left for your children's children. Depth of vision is a very redeeming quality. Are you smart enough to have a depth of vision beyond money?

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

One only has to look to Nevada for a case study on the type of plan proposed by Rocky Mountain Power is bad for everyone affected except RMP. The state loses jobs, billions of dollars in tax revenues, and huge savings in environmental pollution clean up and medical costs. It is everyone's interests, including RMP (although they'll deny it) to reject their plan

Dear UT PSC,

- Infrastructure rates for those with rooftop solar should actually be decreased given RMP nets a significant amount of revenue via "buying" solar energy from residents with rooftop solar at wholesale-like prices and then sells the energy it to non solar customers at retail-like prices, as well as selling this solar produced energy to other smaller energy companies desperate at times for energy at hugely inflated prices - often 3 to 4 times the price they "bought" it from rooftop solar residents. This revenue far exceeds the cost of using RMP's infrastructure for rooftop solar customers.

- RMP's solar rate increase would negatively impacting Utah jobs. "More people were employed in solar power last year than in generating electricity through coal, gas and oil energy combined. Solar power employed 43 percent of the Electric Power Generation sector's workforce in 2016, while fossil fuels combined accounted for just 22 percent." (Forbes 1/25/17)

Dear UT PSC,

Please allow me to elaborate and add to the form letter above.

- Nevada's 2015 legislation to allow its power companies to dramatically increase rates to its citizens with rooftop solar and those thinking of installing solar, killed solar production in the state and proved to be an economic disaster on many fronts. Subsequently Nevada's governor and legislators have recognized this policy error and reversed the law in 2017. In a closed door meeting with opposing sides of energy production in Utah, Governor Herbert reportedly said Utah would be foolish to not learn from Nevada's mistake of legislating against solar production.

- Infrastructure rates for those with rooftop solar should actually be decreased given Rocky Mountain Power nets a significant amount of revenue via "buying" (aka energy credits) solar energy from residents with rooftop solar at wholesale-like prices and then sells the energy it to non solar customers at retail-like prices, as well as selling this solar produced energy to other smaller energy companies desperate at times for energy at hugely inflated prices - often 3 to 4 times the price they "bought" it from rooftop solar residents. This revenue far exceeds the cost of using Rocky Mountain Power's infrastructure for rooftop solar customers.

- Rate increases for rooftop solar would slow the trend of solar power in Utah. One unintended consequence would be increasing not decreasing our significant air pollution problem. Air pollution isn't just a Wasatch Front problem, it's a State problem that inflicts damage to the health of its citizens and negatively impacts Utah's annual healthcare budget due to respiratory illness and disease. Rooftop solar produces pollution free energy. Where as the majority of the power provided by Rocky Mountain Power is produced by coal burning (pollution producing) power plants. There is no such thing as "clean coal". It's an oxymoron and political spin. Solar power is a sustainable, renewable resource. Fossil fuels of course are not.

- Lastly, solar employs more people in U.S. energy production than all fossil fuels combined. Rocky Mountain Power's desire for a solar rate increase would slow solar project production, thereby negatively impacting Utah's employment rate. Forbes magazine wrote in 1/25/17, "In the United States, more people were employed in solar power last year than in generating electricity through coal, gas and oil energy combined. According to a new report from the U.S. Department of Energy, solar power employed 43 percent of the Electric Power Generation sector's workforce in 2016, while fossil fuels combined accounted for just 22 percent."

Thank you for your time,

Chris Pace

Salt Lake City

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

Dear UT PSC,

Solar generation of electricity should be a very significant way to improve our air quality. The less fossil fuels we burn, the cleaner the air. Rocky Mountain Power should be a leader in this change over and should be earning income by renting panels to their customers and making this a new cornerstone of their business. Now they are just in denial and are losing a great opportunity.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Michael Sorensen

Dear UT PSC,

I agree with this message - we should all play a part to clean up our air and not discourage these efforts by allowing Rocky Mountain Power to raise rates on solar customers. If that is all RMP can think of, they will soon become dinosaurs and their customers will begin leaving the grid entirely. Think progressively or die out.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

To: psc@utah.gov

Dear UT PSC,

Power companies are monopolies. Solar allows home owners to generate power for them selves and extra to be put back in the grid. Our actions as a state and a country should be to encourage solar and wind, not stifle it. Utah is perfect for a booming solar industry. Do not allow Utah power to stop this needed change in power generation which is the future our planet needs.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

nancy Martin

Dear UT PSC,

The analysis I've read is that Rocky Mountain Power actually GAINS from the mid-day power oversupply from all the solar panels. Just run with it guys! You're organizing and managing the power, but don't we all benefit if you don't have to generate as much power during those oversupply hours?

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Clinging to old technology is a short-sighted strategy. It is critical that homeowners not be discouraged from using renewable sources for energy especially when we must suffer through days of unbreathable air in Northern Utah.

Dear UT PSC,

Once again, money over people and health. Try to do something for the environment, try to make a possible lifesaving decision for future generations and still be charged for that. The fact that the utility companies get any surplus energy and charge others for the use of that energy is still putting money in the pockets of the utility companies.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

People have the right to lower their power bills, the costs of living have out-paced wages for many; and many of us want to do all we can to help our environment be greener. Rocky Mt. Power makes plenty of money and shouldn't be allowed to make it more costly to go green or lower their bills! Stick up for us consumers and our well-being.

Dear UT PSC,

I find it insulting to my intelligence that R.M.P. would add a tax to solar energy that has been paid for by the house owner. Maybe R.M.P. should have invested more in renewables much earlier in order to deliver cheap, clean power to the consumers but to ask the owners of houses that rely on renewable energy to subsidize R.M.P's profit margin is unethical, greedy and taxation without representation. Why should consumers pay for R.M.P's failed business model ? Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

Dear UT PSC,

Even though my wife and I are retired and we live on a fixed income, we signed a long-term contract for rooftop solar. Our solar panels were installed in early May. Please do not approve any rate changes that would punish us for installing solar panels, discourage others from doing so, and that would stress our limited retirement budget. Thank you for considering these comments.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

I have solar panels on my roof and Garkane Energy screws me every month by taking the electricity that I generate and selling it for an outrageous price while only paying me peanuts. I pay \$35.00 a month as a fixed price and then pay for K/Wh on top of that. Garkane only pays me 2.6 cents a K/Wh. Make it fair for ALL UTAH Customers. Utility Monopolies are killing us !!!

Dear UT PSC,

Why is it the responsibility for the public to keep Rocky Mt. Power in business. Looks like a better product has come along that will benefit the individual consumer, and you will punish them for helping their financial future.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Robert Shepherd
