Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Mark Barone

States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

We are suppose to be using means that will clean up our polluted air here in Utah!!! Like carpooling, not having fires in our fireplaces etc. Using Solar power is another way we can cut down pollution!!! PLEASE commissioners support solar power and don't impose all these financial burdens on people who would like solar panels on their roof tops. These people should be rewarded for putting panels on their roofs. Rocky Mountain Power already makes money on solar power producers by selling the electricity that solar panel households don't use by the end of April. We have solar panels and any "banked" power that we have is wiped clean at the end of April each year. We are doing our part to clean up the air quality here in the SL valley, don't penalize us!! And don't discourage others from putting up solar panels by charging these fees. Rooftop solar panels are also decreasing the demand for power in the hot summer months when everyone is using their air-conditioning which can cause electrical outages. Rooftop solar is also helping decrease the incidences of Utah having to purchase power from other states! Please Please commissioners, don't let Rocky Mountain Power discourage people from installing solar panels by imposing these fees.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

Docket 14-035-114: Rooftop Solar PSC Docket

1 message

Susan Maxfield <artsuspark@gmail.com>

Thu, Jun 29, 2017 at 12:06 AM

Reply-To: artsuspark@gmail.com

To: psc@utah.gov

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

Thank you for your time.

Dear UT PSC,

Please look into the Nevada case, where such rates ruined the burgeoning solar power industry. Manufacturers left the state, and installers were forced to find other employment. The devastation was so complete that their legislature is revisiting the possibility of undoing what was done.

Dear UT PSC,

I think Rocky Mountain Power should get on the solar band wagon or they will go by the way of land line phones. I think solar and wind could help decentralize our power grid which would be a good safety strategy. I think if RMP would helped people to affordable roof top solar they could figure out a way to benefit financially therefore we could all coexist.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

SALT LAKE CITY UT 84111

Dear Commissioners,

26 JUN 2017 PM 2 L

I strongly urge you to adopt net metering policies, which ensure that distributed solar remains a viable choice for Utah families. The continued growth of rooftop solar in Utah offers substantial gains for ratepayers, the electric grid, and the environment.

Please reject Rocky Mountain Power's flawed cost analysis which led the utility to propose unnecessary and detrimental increases to rooftop solar rates. Independent analyses across the country have clearly shown that the benefits of distributed clean energy far outweigh the costs. Please protect rooftop solar and ensure it's viability by keeping prices affordable.

Dear UT PSC,

This state and country need more renewable energy resources. RMP needs to supply the demand and customers want for cleaner and more cost effective power or they need to step aside. We should not be bullied or blocked for doing what is right for our state, country, communities, families and environment. Please help make green power and solar panels easier to obtain and accessible to the masses.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

My wife and I just relocated full-time to Utah last year. We added solar panels to the construction of our home in Springdale, Utah. We have no intention of running a cost benefit analysis to see if it makes financial sense. We are incurring this cost in respect for the beautiful landscape of Zion National Park and the surrounding state of Utah which we now call home. However this rate change could and likely will discourage other Utah citizens from making the same decision.

Besides the obvious benefits for the environment our decision to add solar also helps local business and provides local jobs. This change threatens the livelihood of these local businesses, our new neighbors, to benefit the profits of a large corporation who won't replace the local jobs that will be lost. You just need to look to the state of Nevada to see what happens in these cases. I respectfully expect more from the Utah legislature than to act as a front for corporate profits in exchange for an adverse effect on the environmental and business health of our fair state.

After serving as a School Board Member before moving to Utah, I understand the sacrifice you all make in serving the public and I want to thank the Commissioners for accepting public input on an issue that can become contentious and affect future election outcomes.
