Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Diana McCoy

Dear UT PSC,

Perhaps the Commission should suggest to RMP to consider that each of their customers rooftop is part of RMP's power generation facility and subsidizes the installation on each rooftop, thus alleviating their need to run their present power plants at full capacity.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Dear UT PSC,

Utilities would protect their own interests more and the public interest they are supposed to serve, by thinking long term about energy, instead of thinking short term about profits. To call upon the state to protect monopolies is both laughable and morally repugnant.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

For being a state that relies on tourism to our state and national parks with outdoor recreation being one of the highest drivers of state economy the lawmakers in this state are shooting themselves and the state in the foot by not slimy more to combat our rapidly changing climate. Show us that you actually fight for the people not evil corporations taking our rights as citizens. Most of you claim to be republican but really you just bow to your corporate masters. Prove me and others wrong don't allow Rocky mountain power to charge us for creating our own energy.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Utilities of the future will work with- not agains- DG providers. PUC's that understand this emerging paradigm will be on the side of history from an economic and public relations perspective.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Paul Habib

Dear UT PSC,

How can this possibly be justified? If a fee is purely for offsetting their cost of infrastructure, how can it be so high when RMP has likely already depreciated their grid? No, it's an attempt to quash any competition.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Dear UT PSC,

Now is the time we should be supporting greater development of rooftop solar in Utah, not suppressing it. Independence from fossil fuels is the key to improving our economy and cleaning our awful air, and solar is poised to do just that. Please don't follow the example of Nevada. Utahns want inexpensive solar energy, and you have the power to help make that a reality. Please do the right thing.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

AS the ecosystem is slowly more damaged, yet electricity is still gain from jet turbines, using fossil fuel, I fail to see how there could make any sense in deterring people IN ANY WAY, from using solar power. In Utah we are at a water shortage, constantly drought ridden, and we need to get eco friendly in so many ways. This is a perfect start.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Kymm Eigenheer

Dear UT PSC,

While I am understand the need for rocky mountain to increase it power capacity which it is trying to do through wind energy it should not be done on the backs of solar power. that just pits one form of alternative energy source against another. coal power has been shut down in area's which increase a demand curve and there should be a model that picks up the increase in needed capacity without the load for payment going on solar.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

## Docket 14-035-114: Rooftop Solar PSC Docket

1 message

---

**Breezy Synoground** <Bsynoground@gmail.com>

Fri, Jun 30, 2017 at 2:47 PM

Reply-To: Bsynoground@gmail.com

To: psc@utah.gov

On November 9, Rocky Mountain Power filed a request before the Public Service Commission to raise rates on rooftop solar customers. I oppose this fee request. I do not believe the utility has proven that these customers burden other ratepayers or the system with significant costs.

There are many problems with the utility's claims, including:

Rocky Mountain Power's Cost of Service study dramatically over estimates the cost of servicing rooftop solar customers while underestimating the benefits solar provides to the grid and other ratepayers.

Almost 60% of the "costs" in Rocky Mountain Powers study are actually lost revenue for the utility, rather than actual engineering and maintenance costs. It is not appropriate that the utility seeks to force solar customers to fill its shareholders' pockets.

Lastly, the utility has failed to fully account many of the grid benefits which rooftop solar provides, such as transmission upgrades, deferred capital costs and avoided environmental compliance costs.

I hope the governor's office and the commission take a hard look at the many detailed and thorough testimonies which the solar industry and clean energy advocates will file in June 8.

Rooftop solar is not a "cost" for the grid, but a valuable resource and should be treated as such. These studies will prove it.

Thank you for your time.

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

Utah could have a bright future as a leader in solar power. It doesn't make sense to penalize homeowners who want to transition to a more sustainable form of energy. If anything, we should be incentivizing solar power. It's the future. Please don't let these penalty charges happen.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

It is time to let go of the old ways. It no longer makes sense to protect the old outdated utilities industries. Why is that it's easy to understand people want newer and better and constant updates when it comes to our phones and cars and other possessions, yet when it comes to solar and wind power, our governments stick to these antiquated sources of energy. And continuing to support and fight for big oil companies will cause our planet, our livelihoods, and economy (ultimately what many politicians say is the biggest concern) to fall apart and suffer. No longer should utility company executives bank accounts be the primary concern when it comes to clean energy. Solar is an absolute no brainer, and the more we can embrace and adapt to it, the easier the transition will be, and the communities you claim to care about and represent will be able to thrive and change the way we live and co exist with our planet. Please, for the greater good of myself, my future children, you, your children and all others inhabiting this crazy spinning mass of rock water and life we call home, make solar attainable. Do NOT set up harsh red tape and high expenses. Let us all see each other thrive and create a wonderful Utah to live in. Thank you.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Jennifer Fortin

Dear UT PSC,

Rooftop solar installations represent substantial capital investments and are valuable ADDITIONS to the electric power generation infrastructure. Their installation should be encouraged and not penalized. Reducing greenhouse emissions is necessary to reduce climate change, which affects everyone. Solar makes sense! And the solar industry is an important source of jobs.

Dear UT PSC,

Logically, business interests do everything they can to maximize profits. That is why we also have the Citizens United law that allows vastly greater influence of the mega corporations than the influence of the general public on the outcomes of our elections all across the land and the ever expanding gap in incomes between segments of our society, along with many other political evil policy implementations. Monopolistic actions have long been recognized as counter-productive over time. Widespread solar and other minimally polluting energy sources are advisable on several levels, and attempts to slow their implementation are also to be condemned for the reason that centralized power production is vastly more susceptible to terrorist operations and therefore tempting targets, which brings national defense issues into the discussion. Rocky Mountain Power needs to focus on support for solar power implementation as much as possible for the good of the nation in the longer term, rather than focusing on shorter term profit maximization. The company is suffering from misguided motivation syndrome, which can be observed in widespread instances promoting the poor functioning of our government in supplying the greatest good for the greatest number of living beings generally, not just US citizens.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Randy Johnson

Dear UT PSC,

The world is moving to clean energy. Every country except Syria and Nicaragua and now the executive branch of the United States has committed in the Paris Accords to move to clean energy. Our snowpack, ski industry, and water supplies are at risk to continued warming temperatures. As we do our part to reduce greenhouse gas emissions, we will also reduce our harmful air pollution. Rooftop solar must be an integral part of our transition to clean energy. Rocky Mountain Power business model and rate structure must reflect this reality and encourage rooftop solar.
