Dear UT PSC,

I am helping clean our air with the solar panels on my roof, please help me make them affordable!
Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Mark Barone

Dear UT PSC,

At this point, we should be doing all we can to encourage solar energy, not discourage it. These changes will do damage to not only our economy, but our planet. Please consider what is best for Utahs...not what is best for one business.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Why wouldn't the state of Utah and Rocky Mountain Power want to be a part -- even lead -- this new energy movement? This is the future and if they can't shift to a new reality they should get out of the way and stop trying to undermine clean energy. I'm sick of paying corporate welfare.

Dear UT PSC,

This is very important to me. As individuals in our community we can take a proactive, responsible step to reduce our carbon footprint. Solar and other renewable energies are the future. Germany is an excellent example of what the power of widespread solar adoption can do for the energy needs of a community. We need to support efforts for residential solar adoption in Utah.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Dear Commissioners Clark and White,

I'm 28-years-old and will probably live in Utah for the rest of my life, which I hope will be long and happy. That means I have about 60 years to make sure solar happens for Utah (and the U.S.). I will do this for economic as well as environmental reasons, and strongly urge you to listen to the growing number of people who see the benefits to our economy and self-reliance that solar can provide. It's also a gateway to even better energy solutions. Giving over to Rocky Mountain Power will send us backward rather than forward as they seek to maintain the status quo for their own sake. Please have some vision on this issue. Your time as commissioner will eventually end. You get to decide which kind of legacy you leave behind you. It can be one of scared, small thinking, or one of bold and smart innovation. Please make it the latter. Thank you.

Christine Heaton

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Christine Heaton

Dear UT PSC,

As only a mother of a child who suffers from pollution-induced asthma can tell you, there is no greater price to pay for energy than the health of those you love. By allowing rooftop solar to grow and thrive, not only will Utah's economy and real estate values improve, but we will be saving massive amounts of time and money by improving public health. Not to mention, this is simply the right thing to do. Thank you.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Rocky Mountain Power needs to think this through, if it continues to put in dirty, air polluting power facilities in Utah there's going to be even MORE people with health issues and guess who they're going to come after. Rocky Mountain power has a responsibility to its customers and if their customers want clean solar power, then they should support it not charge them more. Utah needs to get a grip on this cleaner energy before there are no Utahans to pay for power period. Happier, healthier Utahans equals a better financial future for Rocky Mountain Power.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Sincerely,

Allanah Anderson

Comment on Docket 14-035-114 RMP Net metering program proposal

1 message

Docket No. 14-035-114 RMP Net Metering

July 4, 2017

Dear Commissioners,

I urge you not to approve the net metering charges proposed by Rocky Mountain Power in the above docket.

My wife and I are the owners of a Platinum LEED house, which we built in 2010. We have recently installed additional solar panels to make the house essentially net zero and have used net metering since the beginning of 2011.

I have read with interest the Technical Conference presentation by RMP on January 23, 2017 and the Direct Testimony of Dr Jeremy Fisher of June 8, 2017. From these documents I conclude that the power provided by distributed renewable energy is cheaper than that produced by a number of existing coal powered stations even before public health costs are considered. Furthermore, I do not understand the argument put forward by RMP that residential solar power generators are free-riding on the backs of other residential RMP customers. As far as I am aware, rates for all residential customers are essentially "supported" by the big users and I have not heard these users complain about the net metering cost structure for residential distributed energy providers. It appears to me that the RMP argument is purely a public relations exercise in an attempt to create a public backlash against distributed energy providers.

An often quoted technical concern that RMP has is the mismatch in time when solar energy is produced vs the peak demand by electrical customers. The RMP analysis presented on Jan 23rd only considers the demand for residential homes, which I believe is a spurious comparison, since it is the total peak load demanded by all customers (business and residential) that sizes the grid and power generation requirements. I recently spent 10 days in Toronto, where Toronto Hydro has high, medium and low time of day usage charges. Interestingly, high tariff to the consumer is during the day. This is driven by business and manufacturing usage not residential usage and this of course matches the peak generation times of distributed solar.

Toronto Hydro and many other electrical utilities across the world have installed smart meters in all residential homes and have "time of day" charges, which vary seasonally, on all their customers to try and encourage usage behavior that smooths the demand curve throughout the 24 hour day. All utilities of which I am aware apply this charge equally whether the residence has a solar array or not. If time of day or peak load charges are to be used, then all residences should have smart meters installed and the charges should apply equally to all residential customers. Singling out a subset of customers (in this case, the distributed power generators) just because they already have smart meters is iniquitous.

If the amount of distributed power generation becomes an order of magnitude more than it is currently then the technical problems mentioned in the RMP Jan 23rd presentation, such as the need for power conditioning and heavier gauge service wires, will need to be addressed. This can be done by encouraging and providing financial incentives for the installation of batteries at the power generating residences to smooth and control the time and rate at which power is sent back to the grid.

In conclusion, I fully recognize that RMP is a business and as such is entitled to make a profit. However, I urge you to not allow the proposed additional charges outlined in the above docket and hope that you will encourage RMP to develop a tariff system that is fair to all and encourages rather than discourages the development of clean distributed power.

Sincerely yours,

Richard Menzies, PhD
Eden, Utah

Dear UT PSC,

It makes so much sense to grow the use of solar in Utah. Good for the consumers and Big Business should not dictate by punitive rates on the consumers.

Sometimes making sense wrongly takes a backseat in important issues. Hope that you all use common sense in your deliberations and decisions for the good of the consumer. Sunlight is free - so why not use it?

This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

Dear UT PSC,

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,

I strongly urge you to deny Rocky Mountain Power's request to impose punitive rates that would unfairly penalize Utah's rooftop solar customers.

Rooftop solar benefits all customers by reducing the need to build new polluting power plants, saving all customers money. Rooftop solar also protects our air and water by using clean, free sunshine as opposed to dirty fossil fuels. These benefits far outweigh the cost shifts alleged by Rocky Mountain Power, which at most amount to only a penny or two per month for average non-solar customers.

Utah should learn from neighboring states that have been down this road before. States where utilities succeeded in implementing similarly discriminatory rate designs like the one proposed by Rocky Mountain Power have suffered a near complete loss of rooftop solar development. This loss has meant less economic growth and fewer choices for customers. Rocky Mountain Power's plan to kill rooftop solar is the wrong path for Utah, a bad deal for customers, and hobbles Utah's vibrant solar industry.

Please reject Rocky Mountain Power's punitive rates for rooftop solar customers in favor of a rate structure that recognizes the enormous benefits that rooftop solar provides to all customers. Don't let Rocky Mountain Power's monopoly take away our rooftop solar!

cc: Cindy Crane, President and CEO, Rocky Mountain Power

Dear UT PSC,

I would like to refer to the Direct testimony of Thomas Plagemann for Vivint solar, inc. as I agree with his testimony.

Please do not make the same needless mistake in Utah as has been made in Nevada and do not discriminate against a whole industry to preserve the monopoly of one company.

Thank you.

Dear Utah Public Service Commission Chair LeVar, Commissioners Clark and White,
