Reply-To: sbarbieri2014@live.com

To: psc@utah.gov

I respectfully ask that you change Utah's net metering rules and end giveaways to solar companies.

The current net metering regime benefits well-connected solar companies while raising energy costs on everyone else. One estimate says current net metering rules could raise our energy costs by \$78 million in the future. These higher costs would especially harm Utahns who earn low-incomes, since a higher percentage of their paychecks go towards energy bills.

If we don't change net metering, skyrocketing energy costs could damage Utah's business-friendly reputation and hurt our state's most vulnerable citizens.

Please eliminate this unfair subsidy to solar companies and change net metering.

I respectfully ask that you change Utah's net metering rules and end giveaways to solar companies.

The current net metering regime benefits well-connected solar companies while raising energy costs on everyone else. One estimate says current net metering rules could raise our energy costs by \$78 million in the future. These higher costs would especially harm Utahns who earn low-incomes, since a higher percentage of their paychecks go towards energy bills.

If we don't change net metering, skyrocketing energy costs could damage Utah's business-friendly reputation and hurt our state's most vulnerable citizens.

Please eliminate this unfair subsidy to solar companies and change net metering.

Details on Rooftop Solar Settlement Agreement

For months now, Utah Clean Energy has been immersed in negotiations with Rocky Mountain Power and other interveners on proposed rate changes for rooftop solar customers. Last November, Rocky Mountain Power filed a proposal that was unacceptable. It would have made solar unaffordable for most Utah households and eliminated the thousands of jobs that this industry brings to our state. We entered settlement negotiations in hopes of avoiding that outcome.

After a challenging and thorough negotiation process, Utah Clean Energy and other official interveners signed a settlement agreement with Rocky Mountain Power. The agreement will serve as an interim solution to the standoff over utility rates for rooftop solar customers. For better or for worse, more work to ensure Utah's long-term solar future is still ahead of us.

The settlement is the result of a collaborative multi-stakeholder effort initiated by Governor Gary Herbert and the Office of Energy Development (OED) Director Dr. Laura Nelson. Without their commitment, and the hard work of fellow interveners, a negotiated solution would not have been possible. Together we have brokered a compromise between Rocky Mountain Power, the solar industry and solar advocates. While not perfect, the settlement agreement will sustain rooftop solar in Utah in the near term, providing a stable market for residential and commercial solar customers while we undergo an Export Credit Proceeding.

[Details of the settlement agreement, and what it means for current and future rooftop solar customers can be found here.](#)
