Fairness

Utahns deserve transparency and certainty in the regulatory process. Utah consumers have invested their own money and enter into binding contractual agreements with the expectation that policy makers and regulators will not change the rules unilaterally. We urge the State of Utah, the creator of the net metering program, to uphold its commitments to solar power pioneers.

Economy

Energy independence, technological innovation and environmental stewardship are hallmarks of the solar industry, an industry that now employs more than 4,400 Utahns and has an economic impact of more than \$350 million in our state. Turning a cold shoulder to innovation jeopardizes Utah's businesses, jobs and national image.

Self Reliance and Innovation

We embrace technological advancements and are early adopters of technology and innovation that enhance our quality of life, mitigates adverse impacts on our families and finances and enhances our ability to enjoy nature.

The spirit of self-reliance is synonymous with Utah. Utahns should have the opportunity to use the energy they produce on their roof within their own home and not be penalized for it.

I respectfully ask that you change Utah's net metering rules and end giveaways to solar companies.

The current net metering regime benefits well-connected solar companies while raising energy costs on everyone else. One estimate says current net metering rules could raise our energy costs by \$78 million in the future. These higher costs would especially harm Utahns who earn low-incomes, since a higher percentage of their paychecks go towards energy bills.

If we don't change net metering, skyrocketing energy costs could damage Utah's business-friendly reputation and hurt our state's most vulnerable citizens.

Please eliminate this unfair subsidy to solar companies and change net metering.
