To: psc@utah.gov

I have been waffling on solar power for nearly a decade. The following concerns have held me back:

- 1) Cost. It is a big investment and the payback takes time
- 2) Advances in technology. I have been waiting for the panels to have a breakthrough in efficiency

My chief reason for pursuing solar is not global warming (which as we know people debate all the time). I merely want to help clean the air, conserve fossil fuels and reduce dependence on foreign oil. To that end I drive a Nissan Leaf (and love it).

I would like to put up solar panels SOON but the cost is a bit prohibitive. Other states have better incentive programs. Utah should be a LEADER in this field! Be proactive. INCENTIVIZE EVERYONE not just the few that win a lottery. Be forward thinking. Be proactive. Be a leader. Help me get solar panels.
