To: psc@utah.gov

"Clean energy prevention" seems to be the business that Utah's government and Rocky Mountain Power are engaged in. Instead of allowing RMP to levy extra charges on customers who install solar energy generation on their homes, Utah should be congratulating these customers, and giving them tax credits.

Also, RMP and other electric utilities absolutely should be paying co-generating customers for EVERY kilowatt of power these customers are pumping into the grid, instead of merely reimbursing them up to the point where their monthly electric bill is zeroed out, and essentially stealing all of the power they generate beyond that.

Sincerely,
Waid Reynolds
