Hello,

I would like to make a few quick comments on the RMP's annual SIP solar lottery, after looking at the numbers from the last few years. From those it appears that:

1. Less than 20% of the applicants got the award, which is not much.
2. About 20% of the residential and 50-70% of the large scale award winners did not claim the award, which in my mind is quite dismal performance (and suggests that some residents and most large scale entrepreneurs were not as serious about this as they should be).

So, with this in mind, I suggest to consider the following:

1. Shift larger funds to support of small scale residential installation at the expense of the large scale project, with goal of awarding 100% of the residential requests.
2. Overallocate the funds, having in mind that certain percentage of awardees will not claim the award. I think that at least 10% overallocation in residential and 30% in large scale would be manageable.

Thank you. I hope that adjustments to the program will make it more useful than it currently is.

Sincerely,
Martin Cuma
