I would like to encourage Rocky Mountain Power to join many of us in Utah and support the increased development of renewable energy. I believe that their current Integrated Resource Plan places too heavy of an emphasis on energy from coal and not enough emphasis on solar and wind energy.

Please do not accept the current plan, but rather require that we take steps now to reduce our dependence on coal and increase our usage of renewable energy. I have already invested in solar power for my home, and I'd like to see a coordinated effort by the Public Service Commission to have greater focus on renewable energy.
